

# *Office Management*

*New York*  
Prentice-Hall, Inc.

## *Preface*

Twenty years have elapsed since the publication of the first edition of this book. During this period office management has won ever increasing acceptance as an essential and productive function in countless business organizations, so that today the office manager is generally recognized as an executive and the head of a department that is as important to the success of the company as are the finance, the sales, and the production departments. To be sure, much remains to be done in order that he may secure everywhere the status that the importance of his work warrants. In the last decade particularly, however, very substantial progress has been made in this direction.

*Office Management* covers both principles and methods. The present edition deals with the same basic subjects that were covered in the first two editions, but the discussion has been completely revised and brought up to date. Many new illustrations of specific procedures and methods used by representative companies have been added, so that virtually all the material represents the current practice of well-known, progressive companies. Thus it is hoped that this edition, like the two preceding it, will be equally valuable to business executives, office managers, teachers, and students.

The choice of the subject matter of the various chapters has been determined in every case by the relation that the work of the office manager holds, in everyday practice, to the particular matter in hand. For example, the organization, work, and methods of the stenographic, filing, mailing, and messenger departments are covered in considerable detail, but the chapters dealing with the work of the business departments treat primarily those phases of the work in which the office manager has some functional interest, such as record-keeping methods and personnel.

Because of the very close relation existing between many of the subjects discussed, specific references are not given for each chapter. Instead, a condensed bibliography of books, magazines, and other

material on the subject of office management as a whole is given after the last chapter.

In dealing with a field in which so much important work has been done in recent years and so much material published, it is impossible to give credit to all who have contributed to the making of this book. Particular acknowledgment, however, is due the National Office Management Association, the American Management Association, the Life Office Management Association, and the Controllers Institute of America; the publishers of *American Business*, *Office Management and Equipment*, *The Quarterly*, and many other business periodicals; the McGraw-Hill Publishing Company and other publishers, for the use of material published by them; and the Policy-holders Service Bureau of the Metropolitan Life Insurance Company.

Special acknowledgment is due Mr. George W. Oliver, Jr., Office Manager, Crucible Steel Company of America, and my associate, Mr. Ernest de la Ossa, Director of Personnel, National Broadcasting Company, for their work on the current edition. Both have made valuable contributions; the former in connection with Chapters 1-19, the latter with respect to Chapters 20-24. As a matter of fact, without their assistance the revision of *Office Management* would not have been possible at this time.

# **Contents**

CHAPTER	PAGE
1. THE PROFESSION OF OFFICE MANAGEMENT . . . . .	1
Scope of the office manager's responsibility; Growing importance of office management; The place of the office; Increasing use of records; Professional status of the office manager; Qualifications of an office manager; Thorough knowledge of, and experience in, business; Tact and good judgment; Sales ability; Resourcefulness; Methodicalness; Thorough understanding of the term "service"; Leadership.	
2. ORGANIZATION AND THE WORK OF THE OFFICE MANAGER . . . . .	12
The five basic divisions of business; The office as a productive activity; Organization; Management; Scientific management; System; Types of business organizations; Types of office organizations; Advantages and disadvantages of centralization; Combining centralized and departmental types; The place of the office manager in the organization; Work simplification.	
3. SELECTING AN OFFICE SITE . . . . .	32
Importance of proper location; Basic considerations; Erecting a new building; Renting an old building for exclusive occupancy; Occupancy of rented quarters; Selection of the location in the community; Neighborhood reputations; Forecasting future neighborhood changes; Nearness to service facilities; Convenience to employees; Advantages and disadvantages of suburban office location; Selection of the building itself; The rental-cost factor; Adaptability of space offered to layout; Character of other tenants in building; Selection of space within the building; Location of executive offices of a manufacturing company; Use of a weighted table to determine the best location; Features of an office lease; Moving the office to the new location; What to do on moving day.	
4. PHYSICAL FACTORS IN OFFICE PLANNING . . . . .	47
The importance of physical factors; Size and shape of the building; Building facilities; Coat rooms and lockers; Wash rooms; Storage facilities; Office lighting; Other factors affecting lighting; Color; Heating, ventilation, and air conditioning; Floors and floor coverings; Communicating systems; Partitions and railings; Noise-reducing facilities; Electrical facilities; Other physical factors; Office maintenance; Cleaning activity in Rockefeller Center, New York.	
<u>MAKING THE OFFICE LAYOUT . . . . .</u>	
The importance of layout; Factors involved in office layout; Existing departmental divisions; Building around major departments; Flow of work; Analysis of the work to be done; Private offices; Impression

9. ORGANIZATION AND WORK OF THE GENERAL SERVICE UNITS <i>(Continued)</i>	
phone service; Employees' personal telephone calls; Duplicating services; Stationery and office-supply stock room; Layout of the stock room; Use of a stock-record card; The use of bin tags; Issuance of office supplies; The use of obsolete paper and forms; Inventory of office furniture and equipment.	
10. OFFICE MANAGEMENT IN THE ORDER DEPARTMENT . . . . .	184
Work of the order department; Order department routine; Order and invoicing procedure of a manufacturing company; Billing procedure at Grove Laboratories, Inc.; Order department procedure in a mail-order house; Analyzing the work of the order department.	
11. OFFICE MANAGEMENT IN THE SALES DEPARTMENT . . . . .	196
Reliance of the sales department upon records and reports; Organization of the sales department; Prospect records; Customer's record card; Statistical records of sales; Sales records used by Majestic Manufacturing Company; Territorial records; Salesmen's route cards; Salesmen's weekly expense accounts; Records of sales estimates and quotas; Sales quota record of Maremont Automotive Products, Inc.; Sales control—potent sales tool or an expensive luxury?	
12. OFFICE MANAGEMENT IN THE ADVERTISING AND SALES PROMOTION DEPARTMENT . . . . .	211
The place of the advertising function in business organizations; The advertising agency; Duties of the advertising and sales promotion departments; Departmental records; Record of prospects; Mailing lists; The auditing of mailing lists; Records of advertising rates; Record of advertising costs and results; Record of results obtained by an advertisement; Checking advertising results; Stock record of advertising literature; Sales promotion department of A. M. Byers Company.	
13. OFFICE MANAGEMENT IN THE PURCHASING DEPARTMENT . . .	228
The office manager's interest in purchasing; Scope of the purchasing function; Principles of procedure; The requisition; The stock record; The stock-record form; Specifications; Information regarding sources of supply; Contracts; The contract record; Make-and-hold agreements; Catalogues; The inquiry; Quotations; The purchase order; Summary of purchasing department procedure; Purchase and control of office equipment and supplies at American Brake Shoe Co.; Office management and purchasing; Purchasing procedure in a steel-manufacturing company.	
14. OFFICE MANAGEMENT IN THE CREDIT AND COLLECTION DEPARTMENT . . . . .	248
"Project Credit Plan" of United States Plywood Corporation; Importance of office mechanism; Two types of credit operations; Records the credit department needs; Request for credit information; Customer's credit file; Correspondence file; Other records; Record of customer's purchases and payments; Procedure in granting credit; Handling new business; Collection of accounts; Information the collection department desires; Collection card; Retail credit; Records used in retail credit management; Summary.

# 1

## *The Profession of Office Management*

Scope of the office manager's responsibility. Perhaps no other single position in a business organization carries with it such a variety of responsibilities as that of the office manager. In some cases, particularly in small companies, he is often responsible for the accounting function, including supervision of the general books, accounts receivable, credits and collections, accounts payable, and so forth. In addition, in such cases, the office manager also is responsible for correspondence, mailing and messenger service, filing, stenographic work, and other general office activities. In this capacity the office manager is an accounting officer whose title might perhaps better be, and frequently is, treasurer, controller, chief accountant, or secretary.

In other concerns, particularly in larger corporations, the office manager is largely a service executive having responsibility for all types of work that are general and common to all the individual working units of the general office, such as correspondence, office layout, mailing, filing, messenger service, telephone and telegraph, stationery stores control, maintenance, and so forth.

In some few cases, the organization of the office management function is so refined that the controller's, treasurer's, or secretary's department contains a general office division whose sections specialize in such activities as the above services in addition to office employment, methods and procedures simplification, furniture and equipment standardization, and other similar planning functions.

Growing importance of office management. In the past, the office manager's job has had to do with clerical routine. If, however, the office manager of today allows his ideas of the position to be limited by this fact, he is likely to become merely a chief clerk, or a glorified office boy. This attitude, moreover, will be an admission that he has neglected his opportunities for service, and both he and his company will be losers because of his failure to appreciate the opportunities of his position.

A study of the historical background of the profession of office management clearly shows that at first the position usually carried with it simply a meaningless title. Traditionally, each department head had been considered somewhat of a law unto himself, with the result that the majority of office managers in the 1920's found it most difficult and sometimes quite impossible to take over from the key men in the different departments the office duties which had accumulated and which they had been accustomed to look after.

This very desire for independence of action on the part of department heads, however, proved to be one of the chief reasons which made it obvious to an increasing degree that the centralization of office tasks would be a desirable step. Costly duplications and lack of coördination between the work of various departments were the two chief causes. In a word, the increasing size of the business unit and the constantly growing complexity of administrative problems have combined to make the office manager's job a necessary one in modern corporate organizations. The result has been that today the field of office management has logically and constructively reached out until it embraces a wide field, one which is potentially a powerful factor in the development and conduct of any business.

During the past twenty years, particularly, office management has come to be a recognized and accepted activity in the great majority of our business organizations, both large and small. The interest of top management in the functions of office management shows this very clearly. In his discussion of the controller, R. C. Cosgrove, vice-president and general manager of the Crosley Corporation, said: <sup>1</sup>

I expect my Controller to organize and administer his department in a manner that assures all functions under his control being perfectly performed.

I hold my Controller responsible for the efficient operation of all activities falling under the heading of office management. It is his job to see that mail is delivered and collected promptly throughout the office. It is his job to see that the central files and the stenographic pool are running smoothly. It is his job to provide adequate and efficient telephone and telegraph facilities. It is his job to develop efficient operation of duplicating activities, and it is his job to assist in the layout of all office space.

W. E. Tarr, General Office Manager of the Studebaker Corporation, said that if he were asked to describe the responsibilities of the office manager and an organization best suited to effect real improvements in morale and office operations, he would write the description somewhat as follows:<sup>2</sup>

1. The office manager to sit in on management conferences at which the company policy and programs are discussed and decided upon.
2. Top executive to inform other officials and top-ranking departmental executives of the status, duties, and responsibilities of the office management division.
3. The office manager to be compensated in accordance with his new rank in the organization, his responsibilities, and his effectiveness in improving operating results.

#### OFFICE MANAGER'S RESPONSIBILITIES

1. Conduct clerical organization and work audits of all office operations at regular intervals for the purpose of recommending improved systems, methods, and equipment.
2. General supervision of all clerical and office operations of the company.
3. Direct supervision of all centralized office services such as telegraph, telephone, stenographic, and filing.
4. Direct supervision over all office personnel activities of the company.
5. Specify and approve the purchase of all office equipment.
6. Control office physical conditions, such as lighting, layout and service facilities.
7. By agreement with each operating executive, appoint an operating office supervisor for each department of the company. Appointment to be made from within each department wherever practicable.
8. Establish and keep up-to-date an analysis of job routines and a salary administration plan.
9. Originate and carry on research projects in all phases of office operations.

The Office Management Association of Chicago found, as the result of a survey, that in 55 per cent of the cases the person responsible for the operation of the office carries the title of office manager. In the other 45 per cent, the function is carried on by executives holding other titles such as vice-president, controller, assistant to the treasurer, and so on.<sup>3</sup>

The place of the office. The importance of office work and records is clearly illustrated in these excerpts from a paper of Hardy

<sup>2</sup> Tarr, W. E., "Top Management Must Recognize the Office," *The Office*, January, 1943, p. 13.

<sup>3</sup> *American Business*, January, 1946, p. 52.

M. Harrell, Assistant Secretary in Charge of Personnel of the Gulf Life Insurance Company:<sup>4</sup>

When we speak of an office, usually we have in mind three organizations; namely, a working organization, a silent organization and an equipment organization. Let us think of these three organizations as one unit. Office organizations are like people, some large, some small; some old, some young; some neat, some untidy; some thrifty, some extravagant; some efficient, some slipshod. The reason for this likeness is that offices are made of, and operated by, people.

An organization as important as the office must have a manager to be efficient. That manager may have office management as his only duty; or he may be the manager of a small office and do everything, even the "maid's" work. The operation of the office, regardless of size, is dependent upon its manager. We want good office management because we want to effectuate good will and efficiency.

What is efficiency? It is certainly more than accuracy or correctness. I like to think of efficiency including not only accuracy and a volume of work but also the smoothness and ease of operation which contribute greatly to the building and maintaining of good will, pride, and happiness among the personnel and ownership pride in the care of equipment and

kept in an orderly manner or we will be unable to find the records we need and unable to determine the direction in which we are going. This organization is absolutely necessary in the operation of the business. Its efficiency and effectiveness is entirely dependent upon the working organization and, of course, the administrative officers.

The third organization is that of equipment. This organization is the workshop and the tools of the other two and includes space, lighting, heating and ventilation, floors and floor covering, noise reduction facilities, electrical facilities, desks, chairs, files, machinery, supplies and the proper arrangement within the organization.

**Increasing use of records.** The increasing use of records as an essential aid in managerial control has had a marked influence in making clear the necessity for an office manager. Action based on personal observation and first-hand knowledge is more and more giving way to decisions based on reports and records. Executives necessarily are finding themselves increasingly dependent upon records as a means of securing information and exercising control. This dependence upon records is strikingly illustrated by the fact that it is estimated there were some 7,000,000 clerical office workers in the United States in 1946, compared with 3,500,000 in 1930, 2,950,000 in 1920, and 1,630,000 in 1910.

A moment's consideration of the nature of many present-day business organizations will perhaps make this point more clear. Consider, for example, the striking contrast, from the standpoint of records and record keeping, between the needs of the independent retail druggist operating a single store with the aid of one or two clerks, and the requirements of such an organization as the United-Rexall Drug Company. In the first case the proprietor himself needs only the simplest sort of records and reports. He can, for example, tell in a moment the amount of business done during the day simply by looking at the cash register tape. An inspection of the stock of goods of a particular commodity that is on the shelves, together with his personal knowledge of the number of cases stored in the basement, enables him to tell at once whether an additional supply of that item should be ordered. No stock records are necessary. Money paid out for salaries and general running expenses as frequently as not is taken from the cash drawer by the proprietor himself. Thus the owner has constant personal knowledge of both income and expenses.

The president of the chain drug company needs exactly the same sort of information as the corner-store druggist. In practically every case, however, he or his principal assistants must secure the

Fourth, the office manager must devise methods requiring a minimum of effort. Great progress has been made along this line but when the methods of today and those of thirty years ago are compared, it is quickly apparent that the field is still tremendous.

Fifth, he must properly train his force of clerks. In all too many offices, scientific training methods are simply non-existent. Yet clerical work, to be properly done, requires training of a character equal to if not greater than most factory operations.

Sixth, the office manager must know what constitutes a day's work for a clerk, on any one of a hundred different jobs. Do not hastily assume that this is a simple thing to know. Frederick Winslow Taylor started on this quest to discover what was a day's work for a machinist, and it took him twenty years to get the answer; a long time, no doubt, but when he got it, it resulted in doubling the output of every machine shop in the world. Now I know of no operation in the office that should require twenty years' quest to discover what constitutes a day's work upon it, yet I know of very few office managers who will agree as to what a stenographer can do, to say nothing of what can be done in the hundreds of other office operations.

Seventh, he must secure a day's work from each clerk in his office. Any idea which he may have that the clerks are not productive workers, like all others who are paid for their services, and should not be so considered, should be abandoned by both the clerks and those who manage their activities.

There is no question that in the twenty years since Mr. Leffingwell spoke substantial progress has been made toward bringing office management closer to the status of a profession. In many offices where clerical work is a major activity, as it is in life insurance companies, for example, methods comparable to those used in factory production are widely used. Economies which office managers were forced to make during the early 1930's and during World War II eliminated much wasteful effort. Today the training of office employees is an extremely well organized and productive activity in many companies. The work of such organizations as the National Office Management Association, the Office Management Division of the American Management Association, the Life Office Management Association, and the Controllers Institute of America has had an important influence. Many of the practices which are cited in subsequent chapters of this book indicate clearly that office management can be more logically classed as a profession than was possible in 1925.

Yet much remains to be done. There are still all too many companies in which office work is regarded primarily as a necessary evil which merits the least possible amount of thought—and money.

Progress has been made, but the battle is far from won. A much wider application of the principles of scientific management to the organization and operation of offices must be made before office management can truly be called a profession. This situation, which calls for hard work and perseverance, is a challenge to teachers, to students, and to businessmen.

Mr. L. A. Griffin, formerly the General Office Manager of the Johns-Manville Corporation, discussing the progress still to be made toward professional status, enumerated six requirements in the establishment of a profession:<sup>6</sup>

A code of ethics or a statement of principles or conduct.

The free interchange of new truths among the members of the profession.

The possession of a body of organized knowledge.

Formal instruction leading to a distinctive degree from an institution of higher learning.

Certification of proficiency of individuals.

- Recognition and acceptance by the public.

Office management has achieved some of these requirements. Its success in reaching full professional status will depend upon the qualifications of its practitioners and the success with which they render the services and produce the results which top management is coming to expect from office management.

**Qualifications of an office manager.** In addition to having a knowledge of the fundamentals, which are an essential part of true professional equipment in any field, the office manager must possess certain personal characteristics and qualifications over and above those which one may naturally expect every successful business executive to have. The more important of these are discussed briefly below.

Thorough knowledge of, and experience in, business. Without a good background of general business experience the office manager will find it most difficult, if not impossible, to win the confidence of his organization and to secure that coöperation from his subordinates and other department heads which is essential to success. In addition, it is desirable, although not essential, that he have had previous experience in the same line of business. The nature of his work brings him into constant contact with many people specializing in a variety of tasks, and, unless the office man-

<sup>6</sup> Griffin, L. A., "Is Office Management Approaching Professional Status?" NOMA Forum, National Office Management Association, December, 1943, p. 10.

ager has the proper background of experience and practice, he will find his path a most difficult one.

· Tact and good judgment. Tact and good judgment form a part of the necessary equipment of every executive. However, in the case of the office manager, these traits are particularly necessary. The very fact that his department is an important coördinating factor in the organization frequently makes it necessary that he suggest changes in methods, a reorganization of activities, or the elimination of certain tasks. Such suggestions, upon first presentation to those concerned, may not be received any too cordially. To handle situations such as these, which are constantly arising, tact and good judgment are obviously very essential.

Sales ability. Mention of the need for tact and good judgment naturally suggests a third important characteristic which the office manager should possess, namely, the ability to sell himself, his ideas, and his position to his superiors and to his subordinates. He must, for example, be able to show the chief executives that his position does not merely mean just another item of overhead expense, but that the nature of the responsibilities involved fully justifies it. Getting subordinates to work and work willingly with one is in itself no small task. Here again the ability of the office manager to sell himself is apparent. The fact that responsibility for personnel relations is usually a part of the office manager's work is an added reason why he must be something of a salesman as well as an office executive.

· Resourcefulness. The nature of the work for which the office manager is responsible frequently gives rise to unexpected situations which tax his resourcefulness and ingenuity to the utmost. If, for example, the sealing and stamping machine gets out of order—and this is sure to happen at about four-thirty in the afternoon rather than at some less inconvenient time—it is up to the office manager to see that the mail goes out that evening, even though he has to help fix the machine himself, or assist the regular force in doing the job by hand. Again, the office manager may find himself confronted with the problem of absenteeism and constant lateness on the part of certain subordinates. A practical and satisfactory solution must be worked out which will produce the desired results and at the same time not cause resentment and ill feeling. Anyone who has been faced with such a problem knows that tact is not the only necessary qualification. A considerable amount of resourcefulness and ingenuity is essential as well.

While it is obvious that resourcefulness of two entirely different kinds is needed in the cases cited above, it still remains true that the office manager who can quickly adapt himself to a situation and work out a satisfactory temporary solution or a permanent arrangement, as the case may be, is the one who will be held in high regard both by his superiors and by his subordinates.

Methodicalness. The establishment of office methods that will function smoothly and properly is an essential part of the office manager's task. Success in this work means, in turn, ability to analyze a situation carefully, to obtain all the facts, and to work out a plan which will systematize methods of handling routine work. In listing "methodicalness" as a basic qualification, therefore, the word is not used in a sense of fussiness and pettiness, but rather to indicate the fact that the office manager, because of his responsibility for office methods, must be able to bring system and order to their supervision.

Knowledge of the work—more important in the lower supervisory levels; less important higher up.

Good health—older supervisors emphasize its importance; younger ones take it for granted.

Although this list was not intended primarily for office managers, it nevertheless serves the useful purpose of calling attention to certain desirable traits in the leader.

Recently, a group of office managers rated the attributes of a good office manager as follows:<sup>s</sup>

1. Ability to get along with other people.
2. Knowledge of office procedures.
3. Judgment.
4. Intelligence and mental qualities.
5. Personality.

The ranking of a quality such as the ability to get along with other people above the factor of technical knowledge is an interesting reflection of the awareness in the field of management of the importance of human relations in business today. The first and second factors listed above received a combined rating of almost two thirds of the total, indicating that, in the opinion of this group, the office manager who has a knowledge of his job and the ability to apply successfully the human factor as embodied in his employees can expect a fair measure of success.

## 2

# *Organization and the Work of the Office Manager*

The five basic divisions of business. Fundamentally the functions of any business organization may be grouped under five headings—production, finance, accounting, distribution, and administration. The specific relationships which each of these main divisions—and in turn, their subdivisions—bear to each other may be referred to as organization. Although the general office is usually a part of the division of administration, all of the office work in certain kinds of business, and some of the office work in practically all companies, is more closely related to production. This relationship is worth thinking about for a moment in considering the organization and work of the office.

The office as a productive activity. A moment's consideration will show that every business, whether it is engaged in manufacturing automobiles or in underwriting insurance risks, produces a product or service of some kind. The units of the organization which have to do with this production constitute the production departments of that company. This is true, regardless of whether the company sells a material object or an intangible service. In the home office of an insurance company, for example, hundreds of clerks are employed to perform a wide variety of operations on the insurance applications and policies. In a mail-order house, similarly, many persons are engaged in preparing the customer's order for shipment, the operations being divided into a series of specialized tasks, each of which is necessary to the successful completion of the finished job. As will be made more clear in subsequent chapters, the principles followed in organizing such work are, in many cases, the same ones which have been applied successfully for years in manufacturing plants. The mere fact that the operations are performed in an office and are considered clerical work does not in any way make them non-productive. Thus in a

very real and practical sense the office is an important productive activity in every company.

**Organization.** In the previous section, organization was defined as the relationship which the five basic divisions of business bear to one another. This definition, however, is somewhat too general. More specifically, organization may be defined as the division of a complex objective into minor activities, each of which is within the scope of individual effort. This view will serve perhaps to crystallize our conception of organization. Thought of in this way, it is clear that the work of organization consists of subdividing the whole task into relatively small parts, so that each may be done successfully by a single individual. For example, the primary responsibility of the president of an automobile company is to produce and sell automobiles at a profit. This is the complex objective. Obviously, however, the president cannot do everything himself. He, therefore, breaks down this objective into major component parts or divisions and places in charge of each a person who, by past training and experience, he feels is competent successfully to handle that part of the work. Thus he may appoint a vice-president in charge of sales, a vice-president and treasurer, and other major executives.

Organization, of course, does not stop here. These men, in turn, cannot do all the work personally. They, therefore, subdivide their responsibilities, placing in charge of each main subdivision a person who, in their opinion, is competent to do the work. Thus the vice-president in charge of finance, for example, may appoint a controller, an office manager, a credit and collection manager, a cost accountant, and so on.

These department heads, in turn, analyze their responsibilities and again subdivide them. The office manager may decide that centralization of the filing function is desirable. Therefore he organizes such a department and appoints someone to take charge of it. Similarly, a centralized stenographic department and a centralized mailing and messenger department may be established. The heads of these units, in turn, have their organization problems.

It may truthfully be said that as soon as one person is employed by another, there is organization. While it is obvious, of course, that the problem is more complex in a large company than in a small one, the fact still remains that the problem is present and must be solved. Success in solving it distinguishes the organizer from the mere employee.

Management. Management, as distinguished from organization, has to do with the work of bringing about the proper coördination between the various factors with which it has to deal, among which are men, materials, money, methods, and machines. These five factors are often referred to as "the five M's" of management, and even a brief analysis of any managerial problem will show that one or more of them is always involved. Horace Greeley is said to have defined a businessman as "one who knows how to set other people's heads and hands at work, both to his profit and their own." In making this statement he very obviously had the business manager in mind. Organization then may be spoken of as the building or developing element, the structural element, if you will, while management is the directing, controlling, and coördinating element.

Scientific management. The management which applies science to its work, which demands facts instead of guesswork, which establishes standards and methods which are scientifically determined, and, through the aid of records, sees that they are carried out, is spoken of as Scientific Management.

W. H. Leffingwell ably summed up and explained scientific management in his statement of "How to Manage" as follows:

1. Define your purpose.  
You must know what is to be done before you can know how to do it.  
This is your master work.
2. Analyze your problem.  
Your master task will then break up into many detail tasks. Consider them all—neglect none.
3. Seek the facts.  
Study every condition governing each task. Find the undesirable elements, and the desirable elements to be retained. Then standardize right conditions.
4. Devise the one best method.  
Aim to conserve energy, time, space, and material.  
Determine the relation of details to the master task.
5. Find the person best fitted.  
For each task certain personal qualities are essential.  
In each person certain qualities predominate. Find the person best fitted for the task at hand.
6. Teach the person best fitted the one best method.  
Not by driving, but by thorough, patient teaching are understanding and skill developed.
7. Plan carefully.  
Right planning of the arrangement and sequence of work will enable

you to accomplish tasks in logical order—accurately, quickly, and economically.

#### 8. Win coöperation.

Coöperation means working together. It cannot be demanded. It must be won. Accept your share of the responsibilities. Respect the rights and aspirations of others.

Scientific management, although originally developed in the machine shop, is equally applicable to the office, because it is simply using common sense in applying knowledge. When scientific management is considered not as a set of arbitrary rules, but as a means of getting the best out of the business, it is appraised more nearly at its true worth.

Scientific management lessens the cost of attaining results without injury to health or other detriment to the workers. It improves working conditions, increases the earnings of employees, and gives more and better articles and service to the public at much lower prices than would otherwise be possible.

**System.** Observation of the way in which many organizations are operated shows clearly that even among experienced businessmen there exists considerable confusion between management and system. It is of the utmost importance that a clear distinction between these two be drawn. System may be defined as the application of planned methods of procedure to business operations. Through system, every-day work becomes routine. Unfortunately, in the past there has been a tendency to assume that a good system involves much red tape, many forms to be filled out, and considerable delay. As a matter of fact, the real object of system, and, therefore, the characteristics of a proper system, are exactly the opposite. It is the purpose of system to smooth the way for the performance of routine tasks, to speed up work, and to increase, rather than to diminish, efficiency. System is a valuable and distinct mechanism and an aid, both to organization and to management, but is in no way synonymous with either.

**Types of business organizations.** Since the organization and work of the office and its relative importance in a given business depend to a considerable extent on the organizational structure of the company itself, it is important that the reader be familiar with the types of organization in common use today.<sup>1</sup>

<sup>1</sup> Cornell, W. B., *Organization and Management in Industry and Business*, The Ronald Press Company, New York, 1940.

1. Line type of organization. The oldest and simplest type of organization is the line type. In a small organization the owner or manager gives his orders directly to the workers and the workers are directly responsible to him. In a larger organization, as the duties and responsibilities would be too great for any one man, he turns certain of his duties over to executives placed in charge of particular phases of the business. Lines of authority are vertical. All on the same level of authority are independent of all others on that level. Each is supreme in his own field and is responsible only to the man directly above him.

The line type of organization is most excellent in so far as the giving of orders and the defining of duties and responsibilities are concerned. Each man knows definitely his place in the organization. Discipline is easily maintained and control is definite. If a policy is to be changed or an important order is to go out the instructions can be passed rapidly down the line and the change put into effect immediately. The organization plan is simple and there is a minimum of red tape.

To be efficient the line type of organization necessitates the highest grade of executives and workers. Therein lies the main weakness of the line type. No other type demands such all-round knowledge and ability. The foreman of a shop has complete charge of that shop and is held directly responsible. He must understand how the work should be done, plan and lay out the work for the whole shop, see that the equipment for doing the work is on hand and in good condition, determine the proper methods, hire the workers, instruct them, see that they work steadily, accurately, and rapidly, adjust their wages, and take care of an infinite number of other details. He in his turn demands of those under him more than can be expected of them. He becomes a driver instead of a leader. Line organization is an autocratic control requiring absolute obedience and complete knowledge, with the result that, while much may be accomplished, the work is apt to be crude and the workmen "Jack of all trades

Under functional organization the worker comes in contact and takes orders from several functional foremen or supervisors. He takes orders from and is responsible to each supervisor only in regard to the performance of the particular function or functions over which the supervisor has control.

Competent supervisors are more readily found in the functional type of organization than in the line type. The field of the supervisor being restricted to the performance of his particular functions, he can be more readily trained for his work.

It is doubtful if a pure example of functional organization exists in business today. However, the principle of functionalization of activities and allocation of duties and responsibilities on a functional basis are widely recognized and applied.

3. Line and staff type of organization. The line and staff type of organization is a combination of the best features of both the line and the functional types. Authority flows from the top to the bottom as in the line type, thereby definitely fixing duties and responsibilities and insuring proper discipline. In addition to the regular line supervisors, however, there is a staff of experts or specialists. Each expert is at the head of a staff division which has charge of a single leading function or certain similar or complementary functions. The experts and their assistants work out the problems relative to the performance of the particular functions over which they have charge, no matter where those functions are found throughout the business.

Unlike under the functional type of organization, experts do not give their orders direct to the workers concerned. Their recommendations and directions are carried out through the line supervisors in charge of the workers. Thus, the line supervisor directly controls the workers under him and maintains the proper discipline. He does not, however, have to bear the heavy load of duties and responsibilities as under the line type. He is responsible for seeing that the recommendations and instructions of the staff experts are carried out, for the control of his men and for all other duties assigned to him, but he is relieved of solving the many problems covered by the staff or service divisions.

4. Committee idea in organization. One of the most effective means of making a business structure pulse with life is to get the members working together as a team. Men on the same authoritative level often unconsciously are jealous of each other or distrust each other, feeling that unfair advantage or undue credit is being taken. Place these same men on a committee, give them a common problem to work on, and on getting to know one another better their suspicions vanish. Harmony is an important side issue of the work of committees.

Success in any enterprise depends upon unity of action. The larger the organization, the greater the need for some coordinating force to bind the various units into a working whole. Properly selected committees placed at strategic points in the organization can be made that force. For example, one of the greatest problems in industry is how to balance sales and production. Close cooperation between the sales division and

Thus, for example, the function of handling incoming and outgoing mail and providing messenger service is put under the jurisdiction of one person, who is responsible for seeing that this particular type of service is effectively rendered to all other departments of the company.

In practice, fully departmentalized and centralized types of office organization are found only infrequently. Take the example of mailing and messenger service just cited. One will find many cases in which a mailing and messenger department exists, but almost invariably one or more messenger boys will be found who are definitely and permanently assigned to the offices of one of the chief executives. Similarly, many examples of so-called fully centralized filing and stenographic departments exist which, upon investigation, prove to be entirely centralized in theory only. Rarely, if ever, does one find the chief executives and department heads utilizing exclusively the services of these departments. The president, the treasurer, the sales manager, and others find it desirable to have their own private secretaries and to file certain letters and papers in cabinets in their own offices. Thus, even though the centralized or departmental type of organization may, on the surface, appear to exist, exceptions arise to a degree which make it impossible to say that a pure departmental or centralized form of organization is to be found.

Advantages and disadvantages of centralization. Inasmuch as centralization is a problem which is fundamental to the work of every office manager, it will be worthwhile to state briefly the advantages and disadvantages of this form of office organization. These may be summarized as follows:

#### ADVANTAGES

1. It makes use of specialized supervision, which results in better quality and quantity of work.
2. It develops specialized personnel. Training of the employees is facilitated and, through repetition, expertness in performance can be achieved.
3. It reduces waste time. Production peaks and valleys can be eliminated by proper planning and scheduling.
4. Rush jobs can be finished quicker by utilizing the entire unit.
5. Idle time of machines and equipment is reduced. The result is a lower inventory of these items and a reduction in space requirements.
6. It is easier to cope with absences due to vacations or illness.
7. Standards of performance can be established more readily.
8. Equitable wage administration becomes more simplified.

greater than his own stenographer can handle conveniently. Thus a minimum of the stenographer's time is wasted through lack of work, and inconveniences to the executive on account of absences due to sickness, vacations, and other causes are reduced to the minimum. The net result of the plan is that both the executives and the stenographers secure the benefits of a private secretarial arrangement with all of its obvious advantages, but with most, if not all, of the usual disadvantages eliminated.

The place of the office manager in the organization. The place of the office manager in the organization, of course, is a matter which is determined very largely by the way in which the function of office management is defined in a given company.

In an attempt to appraise the present-day job of the office manager, the Policyholders Service Bureau of the Metropolitan Life Insurance Company, with the coöperation of the National Office Management Association, surveyed some fifty representative companies, selected to provide as broad a range of experience as possible. The results of this study are summarized in the sections that follow:<sup>2</sup>

#### OFFICE MANAGEMENT VS. THE OFFICE MANAGER

One of the significant points brought out by this survey is the distinction that must be made between the function of office management and the job of the office manager. While the office management function is present in every business organization, there is considerable variation in the manner in which this function is distributed and assigned. Every company does not have a specifically designated office manager. As a matter of fact, most executives, irrespective of their title or responsibility, perform some office management function and are to that extent office managers.

#### ORGANIZING FOR OFFICE MANAGEMENT

From an organization standpoint, the principal distinction lies in the extent to which office management has been functionalized. This survey indicated that the arrangements generally followed on this point can be grouped as follows:

1. *The company in which office management is fully functionalized.* Here the responsibility for all office management functions is concentrated in the hands of a single executive, who is the office manager in fact as well as in title. Where this arrangement is followed the office executive, as a rule, reports direct to the president or general manager and is responsible for all office activities, irrespective of their nature or

<sup>2</sup> *Functions of the Office Manager*, Policyholders Service Bureau, Metropolitan Life Insurance Company, New York, 1941.

attempt to include an office management specialist in their organization, either on the service or staff basis, as covered by Plans 2 or 4 or in combination with other activities.

### RELATIONSHIP TO THE COMPTROLLER

One significant point from the standpoint of organization developed by this survey is the growing importance of the comptroller in the office management picture. In at least 20 of the companies whose practices were reviewed, responsibility for the administration of office activities was either assigned directly to the comptroller or chief accounting executive, or was his indirectly through a subordinate office manager. Apparently, this has been a natural development of the comptroller's job. Much of the record keeping with which the bulk of office activities are concerned is required and used for control purposes. As the executive responsible for this control function, the comptroller naturally is directly concerned in the manner and form of preparation of the control data.

### GENERAL SCOPE OF OFFICE MANAGEMENT

Because of the variations in the organization and interpretation of the position, as already described, it is not possible to set down a standard list of activities as constituting the functions of the average office manager. It is possible, however, within certain reasonable limits to outline the general scope of activities normally included within the field of office management. Figure 1 gives a composite list of functions as developed by one company.

For the purposes of this report, the functions of office management have been grouped into six general classifications.

Functions related to:

1. Office personnel.
2. Office methods.
3. Office equipment.
4. Physical factors in the office.
5. Control of office costs.
6. Office policies.

Each of these divisions includes a number of detailed activities in the assignment and handling of which probably no two companies are identical. Because of this variation of practice, each of these groups of activities is separately discussed in a subsequent section of this report.

### ALLOCATION OF SPECIFIC FUNCTIONS

The allocation of office management functions within the organization cannot be discussed in too general terms, but must be considered in terms of the various detailed activities involved. Perhaps the most important question for decision in this connection is the degree of centralization to be employed. In other words, what is to be the relationship and the respective responsibilities of the office executive and the various depart-

mental operating executives on the many matters affecting clerical operations in those departments? Apparently there is no agreement as to the best policy on this point. It depends too much on the activity involved and the circumstances in each specific case. Also there are differences in the fundamental concept of the office management function that would directly affect this decision.

One point on which there is general agreement in this connection, however, is the need for a clear-cut and definitely established division of authority and responsibility irrespective of the point at which this division is made. Neither arrangement will prove very effective if there is not a thorough understanding by the executives concerned of their respective responsibilities.

*Functions related to office personnel.* As in any phase of business today, matters affecting office personnel have special significance. In the final analysis, a large proportion of all transactions and operations in the office involve the human factor and consequently call for personnel management. Under this category comes the recruiting and selection of office workers. They must be assigned to tasks for which they are best fitted and given adequate training in their work. Proper motivation must be provided in the form of equitable compensation and promotion, with the incentive factor furnished by recognition of specially meritorious work. The attitudes of the employee toward the company must be developed and guided so as to forestall misunderstandings and grievances and to build up a spirit of loyalty and cooperation. Besides all this, there must be the day-by-day direction and supervision of the work of each individual employee and the maintenance of discipline and personal efficiency.

*Functions related to office methods.* Office methods constitute a second major group of office management functions. Under this heading is included the planning of office operations and the devising and prescribing of office methods, procedures, and routines involved in the conduct of the office activities. In this category probably should also be included matters related to the various office records and the forms and supplies required for the preparation of such records. Questions of standardization and simplification of forms and procedures will be involved, and problems of the flow of work and order of handling are included. From the standpoint of organization, the question again is the extent to which these functions fall within the province of the office manager.

A large majority of the companies surveyed have concentrated responsibility for all office methods, forms, records, and procedures in the hands of the office executive. Of the 31 companies that reported following this plan, 20 do so without qualification. In several other cases the only restriction is to make the decision of the office executive subject to the review or approval of a senior executive, such as a vice-president or comptroller.

Methods work in the office has come to be quite generally regarded as a job for specialists. Standardization or methods units have been established to carry on these activities. Usually these groups operate in a staff capacity, under the direction of the office manager.

also responsible for office management matters, as is often the case, centralized control of office costs would naturally be included. If there is no such combination of functions, the office manager has varying degrees of responsibility for cost control, depending largely on the extent of his authority on other matters. In about half of the companies surveyed the office executive had definite responsibilities in connection with the control of office costs. In some instances this involved the current development of detailed unit costs for each office activity; in others, special cost analyses are made only of certain activities and not on a continuing basis.

*Functions related to policy determination.* Questions of policy are constantly arising in the administration of an office. Some are fundamental and broad in their implications, affecting all phases of the company's operations; others are of little or no significance beyond one particular department or division. It is difficult to define just what constitutes a question of policy, and it is equally difficult to differentiate between policies related to office management and others. For these reasons there is no clear-cut definition of the office manager's responsibilities as regards policy matters. So far as it is possible to generalize, it may be said that policy matters of a routine nature and those limited strictly to office problems are usually left to the jurisdiction of the office manager. Generally, however, the determination of company policies is the function of the senior executives. Often it is the president's responsibility, and in some matters the board of directors makes the decision.

It is quite evident that a rather definite distinction is made between the office executive's responsibility for formulating policies and that for interpreting and administering them. The latter seems very definitely to be a part of the office manager's job. As the point of contact between the executive management and the office organization, he is looked to to see that the company viewpoint is properly presented and understood, and that the policies are introduced and administered in a way to conserve and promote employee good will and cooperation.

Work simplification. One of the duties of the office manager which has become increasingly important in recent years, particularly in larger and more progressive companies, is the responsibility for the establishment of efficient and economical procedures in all departments of the organization, including the office division itself. Work of this type is often referred to as methods study, procedure study, or work simplification.

Mr. George H. Sutton, of E. I. du Pont de Nemours & Co., in a discussion of this subject, said:<sup>3</sup>

*Necessity for work simplification.* It is through work simplification that we must depend largely in our efforts to establish definite work

<sup>3</sup> Sutton, G. H., "Work Simplification," *NOMA Forum*, National Office Management Association, June, 1943, p. 10.

attention given to them. They have simply outlived their usefulness and nobody has taken the initiative in eliminating them. As a result, they go on month after month with a needless waste of printing cost and the even more important loss of clerical time in their preparation.

*Machine studies.* One of the most important things we need to do in connection with our mechanical equipment today is to make sure that we are getting the maximum use of our machines. That is, are we assigning work to our operators which should be done by other clerks before it comes to the machine. In our central billing office it was found that by having clerks go through the meter books and prepare certain accounts of an irregular nature in advance the greater production by the operators more than offset the preliminary clerical work. On any machine operation where the operator is frequently stopping even for a few moments there is a possibility of rearrangement of the work to advantage.

Perhaps you are turning over in your mind the question: "What do we need to do in our office to establish a more effective program of work simplification?" With the many different types of businesses, plus the fact that some are "home" offices, some divisional or regional and others district or local offices, the answer will not be the same for all because each office has its own particular problems to work out. You might find it desirable to call in an outside consultant on office planning to make a complete survey and recommendations. Many companies have found this to be a very effective plan because they get the benefit of an outsider's viewpoint, with a broad experience gained from many different types of business. Another plan is to have this work carried on by a Methods or Standards Division, operating as an independent unit in your own organization. I think this set-up is much more desirable than calling in an outside expert because your own Methods Division, by giving its full time to only one business, could readily spot the weakness in some new system or procedure under consideration.

A third plan is for the office manager and his supervisory staff to do the job themselves. Frankly, I feel that this is where the job belongs, although I will readily concede that office managers have not exactly "set the woods on fire" in their efforts along this line in the past. With all of our other responsibilities steadily increasing, there is certainly a temptation to defer making the proper analysis of existing methods and procedures, particularly if they are operating smoothly. But after all, do office managers and their supervisory staffs really have any duties more important than planning the work and setting up procedures and routines so that it will be done in the most efficient manner possible? Why shouldn't they be the ones to first see the possibilities in work simplification on the various assignments under their supervision?

The Director of the Office Methods Division of the Westinghouse Electric Corp. of Pittsburgh, Pa., describes his company's plan as follows:<sup>4</sup>

<sup>4</sup> Neaidengard, R. C., "Organizing and Operating the Methods Department," *Annual Proceedings, National Office Management Association*, 1945, p. 99.

arise into further subdivisions, such as storeroom inventories, in-process inventories, warehouse inventories, etc.

2. *Equipment analysis*—To establish subdivisions headed by specialists in bookkeeping, payroll, tabulating, reproducing, transcribing, and any other types of equipment, as needs arise. Our present plan provides for further segregation of these subdivisions as new developments occur, which will substantiate detailed studies of various types of equipment within any major equipment group. For example, it may be necessary under reproducing equipment to have specialists on duplicating, others on photographing, and still others on electronic reproduction. Again, the job chart is flexible to subdivide as needs arise.

3. *Forms engineering*—To establish subdivisions, such as standardization of forms construction, application of forms, standardization of forms in use for same activities, paper conservation, etc.

4. *Records analysis*—To subdivide to microfilming, records preservation, local filing of semi-active records and permanent filing in an archives building, which we plan to erect as soon as restrictions are off; and as other operations are determined, to further subdivide these operations.

5. *Office layout analysis*—To subdivide this main classification into office arrangement, furniture and fixture application, lighting and ventilation, and any other subdivisions that may be further desirable as time goes by.

6. *Clerical incentive analysis*—To create subdivisions of different classes of clerical operations. One subdivision will be central stenographic operations; another will be accounting machine operations, and another will be filing and sorting operations. Further subdivisions will be made as programs of clerical incentives are accomplished and accepted. In the analysis of clerical incentives, we must watch closely the progress of employee gain through incentive in the various types of clerical jobs, as this is our guide and the indicator of our progress.

This is the overall job chart that we have developed to follow in expanding our office methods division. As you see, it provides flexibility for expanding or contracting as the needs arise from changing conditions. It also combines several types of segregations of operations which we feel gives us complete coverage of all office methods and procedures; and it provides for supervision and education of methods people through various steps in the operations, so that a minimum of key personnel can operate down to the most minute detail.

The plan for the operation of the methods division consists of having each major classification headed by an assistant director, who will co-ordinate the activities of the various major classes. As the analyst or specialist in any particular major class finds conditions which call for counsel or advice by a specialist from some other major class, these people will be brought together to jointly solve the problem.

## 3

## *Selecting an Office Site*

**Importance of proper location.** The question of where an office shall be located, both as to the community and the building itself, is an important one. When one considers that office space in buildings in larger cities costs from three to six dollars per square foot per year, while other quarters—not necessarily far away—may be secured for from one to two dollars, it becomes apparent that careful consideration of the relative advantages and disadvantages of possible sites is important.

Rental cost, however, is not the only factor to be considered. Nearness to allied or associated lines of business, accessibility for customers and employees, provision for future expansion, the reputation of the locality and of the building itself, and nearness to sources of supply and transportation facilities, as well as many other matters of equal importance, must be considered. Moreover, assuming that the office will be located in a building already constructed, the various possible buildings must be considered in connection with the adaptability of the space offered to the layout of the departments and the flow of work. Although in actual practice a compromise is frequently necessary, it is far better to follow the principle of finding space which will be suitable to the existing or proposed departmental layout rather than to attempt to fit the departments, by expansion here and contraction there, into a space which has been selected merely because it is cheap in price or because it commands an excellent view from what will be the chief executive's private office.

**Basic considerations.** In considering the question of office location, thought must first be given to several fundamentals of policy and practice. First of all, in the case of a large organization, there is the question of the building itself. Is it better to build a new building and occupy all or an important part of the space, or rent a building already built? Again, do the space demands necessitate renting all the space now, or is it better to rent only a part of the

space available at the present time and to provide in some other way for future expansion? In addition, in the case of a manufacturing company, there is the question as to the best location for the office. Shall the office be located in the same community as the plant? If not, where? If the office is to be at the same site as the plant, shall it be placed in the same building occupied by the manufacturing departments, or shall a separate administration building be constructed? These questions merit careful consideration.

✓ **Erecting a new building.** While it is clear that only relatively large companies are in a position, from the standpoint both of finances and of space needs, to consider the erection and occupation of a new building, many advantages accrue to the company that decides upon this course.

If the company decides to build, it is possible to plan completely the interior layout and construction to suit one's own individual needs, and to provide for future expansion for many years to come in any one of a variety of ways. The home office building of the New England Mutual Life Insurance Company in Boston, the *Daily News* building in New York, the General Motors building in Detroit, the McGraw-Hill Publishing Company buildings in New York and Chicago, the Prudential Insurance Company of America building in Newark, the Palmolive and Wrigley buildings, and the *Tribune* Tower in Chicago—all are but a few illustrations of cases in which it has been possible for individual companies to secure these advantages. Banks also are institutions that often occupy entire buildings. The various Federal Reserve Bank buildings throughout the country, as well as the buildings which bear the names of individual commercial and savings banks, are all cases in point. Generally speaking, banks occupy an entire building more frequently than do business organizations.

One practical method, which is often used in cases where a company constructs its own building but is not in a position to occupy the entire floor space at once, is to arrange some of the floors so that they may be rented temporarily to other occupants. If deemed desirable, the ground floor may be fitted up for store use. By being careful in arranging leases and by exercising a little forethought in construction details, it has been possible, in many cases, to provide adequately for future expansion and at the same time secure a welcome income from the space thus reserved until such time as it is needed.

In addition to securing the construction and layout which the requirements of the business demand, the erection of a new building which bears the name of the company obviously has distinct advertising value. This is true, of course, even though some or a considerable share of the total space is leased to other organizations. In fact, in some cases the company whose name the building bears may occupy only a minority of the total rentable floor space. The RCA building, one of the buildings comprising Rockefeller Center in New York, and the McGraw-Hill building in Chicago are cases in point. Generally speaking, building-management firms, whose business it is to rent and manage large office buildings, are glad to make such arrangements, especially with nationally known companies. In this way not only is the rental of an important amount of space for a considerable number of years assured, but the fact that a well-known organization is going to be located in the building is a distinct asset in facilitating rentals to other equally desirable tenants.

Renting an old building for exclusive occupancy. Where the construction of a new building does not seem practical, the suggestion is sometimes made by company executives, or others, that an old building be acquired and completely renovated to meet the needs of the organization. The problem of acquiring and altering an existing building, however, usually presents difficult practical problems. For one thing, there is the matter of obsolescence. Office buildings which are thirty or more years old are generally regarded as obsolete. If, then, a company is considering the advisability of purchasing a building ten years old, it is at once apparent that one-third of the possible life and usefulness of the building has already passed. Recent advances in building-construction methods and the quick public acceptance of such things as air conditioning, soundproofing, and high-speed automatic elevators have tended to accelerate materially the rapidity with which buildings become obsolete. It is well to remember that the office is the "home" of the business, and that the same factors that cause people to demand modern houses are present to the same extent in the case of business buildings.

In addition to the matter of obsolescence of the building itself, obsolescence of the neighborhood in which the building is located must also be considered. Even the most casual observation of the changes which have taken place in practically every city of the country will show that locations that were considered excellent

twenty years ago are today quite impossible for business purposes. The acquisition of an old building, therefore, with the thought that the organization will in some way be able to put up with the inconveniences of construction and location, which are apparent even before the building is occupied, is almost always poor economy in the end.

Apart from the question of obsolescence, the problem of making necessary changes to adapt the building to the uses of the new owner is frequently a costly and difficult undertaking. The location of columns, the placing or removal of partitions, the condition of the wiring system, the location of wash rooms, stairways, elevators, and so on, the size of bays, and a host of other factors are likely to arise and to obstruct, if not to make altogether impossible, the design of a layout in harmony with best modern knowledge and practice.

In a word, the purchase of an old building, or the rental of one for a long period of years, is a step to be avoided, except when unusual circumstances prevail. Even in a new building, changes which should or must be made come quickly enough.

Occupancy of rented quarters. The third alternative open to the company seeking a new location is one that is followed in a large majority of cases, namely, the rental of space, either in a new building or in an old one. The major advantages of such a procedure are, of course, the obvious fact that no considerable amount of capital need be tied up in the building itself; the freedom of change in the future, which renting always gives; and the freedom from care and worry, which is the price of ownership in any case.

On the other hand, renting has its disadvantages. It is not always possible—in fact it is usually impossible—to secure exactly the sort of layout that will best fit existing or contemplated departmental arrangements. It is usually necessary, therefore, to fit the organization, to a certain extent at least, to the layout. In addition, the tenant must necessarily rely to a considerable extent upon the promises of the owner or agent in regard to building maintenance and service facilities that will be provided. Those matters for which the tenant is usually responsible, as set forth in the usual office lease, and those for which the owner is responsible, are discussed in a subsequent section in this chapter.

Selection of the location in the community. Assuming that a company is going to occupy rented quarters, as is usually the case,

the location in the community must be selected. A number of factors are of particular importance, among them being the reputation of various locations or neighborhoods in the city, probable future developments in the section under consideration, nearness to service facilities, and convenience of location for employees.

Neighborhood reputations. Neighborhoods, like individuals, have reputations. It is often of the utmost importance that the office be located in the "right" part of town. A very brief and simple analysis of the various business districts in any city will show clearly that each is thought of in connection with a particular line of business. For example, in every large city there is the retail or shopping district, the wholesale district, the financial district, the residential district, and so on. These, in turn, are often subdivided into zones, which are associated with specific classes of trade. For example, Fifth Avenue and Madison Avenue above Forty-second Street, in New York City, are generally regarded as the exclusive shopping districts. The location of the Saks Fifth Avenue Store at the corner of Fifth Avenue and Fiftieth Street marked the beginning of a distinct tendency for the higher-class stores and specialty shops to locate on Fifth Avenue between Forty-second and Fifty-ninth Streets. In 1946 both Best & Co., located at Fifth Avenue and Thirty-fifth Street, and Lord & Taylor, located at Fifth Avenue and Thirty-eighth Street, announced plans to move to Fifth Avenue at Fifty-first and Fifty-second Streets. One of the main reasons undoubtedly was the importance of a location within this exclusive shopping district.

The business sections of New York City also have their specialized reputations. Maiden Lane, a narrow street in downtown New York, has for years been the center of the jewelry trade. John Street for a long time has enjoyed the reputation of being the center of the insurance brokerage business. Wall Street, of course, one immediately associates with financial institutions of all kinds.

specialty shops, as well as many of the newer office buildings. In San Francisco, Market Street is the principal business thoroughfare. The leading financial houses are located on Montgomery Street, while the wholesale district is concentrated on lower Mission Street. Numberless additional illustrations might be given to show that a very distinct although invisible line divides the business life of any city into a number of component parts.

**Forecasting future neighborhood changes.** The present reputation of a neighborhood, however, is not the only matter to be considered. In fact, it is just as important that the probable changes in the neighborhood during the coming years be taken into account and estimated as accurately as possible, as it is that the present reputation be given consideration.

A specific illustration will indicate very clearly the disastrous results which are bound to follow when future changes are not given proper weight. In this case the home office of a nationally known financial institution was located in what was formerly the residential district of a midwestern city. The ground was cheap, there was plenty of light and air, and there was no reason to suppose that for an indefinite period of time the institution would not be able to meet all of its requirements in an effective manner in the location chosen. After the lapse of a very few years, however, the situation changed so materially that the entire character of the neighborhood deteriorated, and it is now completely inundated with light manufacturing establishments, as well as settlements of large groups of industrial workers. It is a foregone conclusion that this institution, which is rapidly expanding, will be obliged to move in a very short period of time to another location where it will be in surroundings adapted to the character of its business and likely to hold the type of employee which the institution seeks to attract.

**Nearness to service facilities.** Offices depend to a large extent upon a variety of service facilities made available to them by various outside agencies. For example, little business could be transacted without the use of the mails. Where the volume of correspondence is considerable, as in an insurance company or a mail-order house, nearness to the post office or its substations is of considerable practical importance. Similarly, proximity to express offices, to railway terminals, to district offices of the telegraph company, to office supply houses, and to other outside service agencies, is desirable. While this group of factors may perhaps,

in general, be regarded as relatively unimportant, they must always be taken into consideration in choosing an office site.

**Convenience to employees.** In office location the convenience to employees in going to and from work is not always given the consideration which it deserves. Every office manager will realize, after a moment's consideration, that employees select positions and stay longest, other things being equal, in those offices which are most conveniently situated with reference to their homes. One well-known office organization, for example, is located in an eastern city in a wholesale district, inconvenient to reach for anyone coming to it from almost any part of town. In a number of cases employees are known to have accepted positions with the company only until they could find work in an office located more conveniently to their homes. The net result is that the company has found it necessary to pay something more than the current market rate in order to make the employment opportunity an attractive one.

**Advantages and disadvantages of suburban office location.** In some cases the question arises as to whether a city or a suburban location for an office is better. There are advantages and disadvantages attached to both locations, but, as a matter of current practice, if the concern is a manufacturing company the selection of the office site depends more directly upon whether the office should be located at the plant site. If so, the plant location determines the office location. If the organization is non-manufacturing, or if it is advisable to separate the office from the plant, the office, almost invariably, will be located in the city.

While each situation must be decided, of course, on its own merits, the number of offices which are located in the suburbs is relatively small. Unless unusual factors exist, a city location is much to be preferred.

**Selection of the building itself.** Having decided upon the general neighborhood in the community in which office space will be sought, there next arises the question of selecting the particular building in which to locate. In this connection at least four factors must be taken into consideration: (1) the rental-cost factor; (2) the adaptability of the present arrangement to the present or proposed departmental layout; (3) the service facilities of the building, such as elevator service, both passenger and freight, janitor service, maintenance service, and so on; and (4) the character of the other tenants. Each of these factors deserves further specific

consideration. With the exception of the third, which is discussed in detail in the following chapter, they are considered below.

**The rental-cost factor.** By far the most important point to be borne in mind in connection with rental cost is the fact that the cost per square foot is not the only price of occupancy paid by the company. Consequently, space at three dollars per square foot may, upon analysis, be found to be just as cheap if not cheaper, in the end, than a site located elsewhere renting at two dollars and a half per square foot. A case in point of the effect of an error in judgment in this matter is to be found in the example of the office organization cited in the section (page 37) dealing with neighborhood changes.

**Adaptability of space offered to layout.** As has already been stated, a fundamental principle of good office location and layout is to select, as far as it is practical to do so, space which can be adapted readily to layout requirements, rather than to attempt to reverse the process by forcing the layout to adapt itself to a given space which is already arranged in a certain way. A smooth and continuous flow of work between the various departments comprising the office is essential to handling the work with dispatch. This important subject is discussed fully in Chapter 5.

**Character of other tenants in building.** Just as neighborhoods within a community have reputations, individual buildings carry with them prestige, or the lack of it. While it is true that real estate operators and brokers attempt to build up a certain reputation for a building and then utilize it in selling space, it is nevertheless a fact that the reputation and character of the building in which a company is located may well be a distinct asset or a definite liability.

The nature of the business of present tenants is the principal factor which makes or breaks the reputation of a given building. It is not very pleasant, for example, for customers who have occasion to visit the company offices to have to take their turn with a miscellaneous assortment of boxes and bundles on a combination freight and passenger elevator in order to reach their destination. Yet, if one locates an office in a building in which even light manufacturing is permitted, this may be the result. Well-appointed lobbies, good elevator service rendered by well-mannered personnel, and clean floors, all contribute to the general impression which the building makes on prospects, customers, and employees, and all have a direct effect on the good will which the business enjoys.

Selection of space within the building. The floor and the part of the building in which the offices are to be located is well worth considering. An eastern exposure is usually considered the best; a northern, the second choice; a southern, the third; and a western, the least desirable of all. The upper floors, say, the fifth floor or above, are, of course, regarded as more desirable, and consequently are more expensive, because of the better natural light and ventilation, as well as the smaller amount of street noise that reaches them.

In one case which recently came to the writer's attention, it was necessary to both soundproof and air condition an executive's office, at a cost of some \$1300, simply because its location on the third floor, with southern exposure, facing a principal business street on which trolley cars operated, made it too noisy for conversation when the windows were open, and unbearably hot when they were kept closed.

The frequency with which customers and others call at the office is also a determining factor in selecting the space in the building to be occupied. Obviously, for example, few banks would consider a location on the upper floors of a building.

The opportunities that various possible locations within a building offer for future expansion is also an important point to consider. In planning a new location a company should provide definitely for the growth of the business for five years at least. It is also generally true, in the case of office organizations whose business is growing at a normal rate, that space requirements double at least every ten years. Consequently, space taken on floors in which additional offices will be available in the near future, rather than on floors where the balance of the space is rented for a number of years in advance, is preferable.

Location of executive offices of a manufacturing company. Industrial executives have given considerable attention to the question of whether, in general, better results are secured when the administrative or executive offices of a manufacturing company are located at the factory, or at a point some distance from it. This matter is especially important when the plant itself, because of specific conditions, such as nearness to a good labor supply, nearness to raw materials, nearness to markets, low taxes, or superior transportation facilities, is located in the country or in a town which is difficult to reach.

Decision on this point depends very largely upon the ability of the company executives and office departments to coördinate

their work successfully. There is also the question of the ability of major executives to secure and maintain adequate control over, and information about, activities at the plant. Although each case is a problem in itself, and no general rules can be laid down which are universally applicable, the tendency in recent years has been toward locating the executive offices and the plant at the same point. The advisability of this procedure is emphasized by the fact that in a number of cases companies whose offices were formerly located at a distance from the plant have later deemed it advisable to move to the plant itself.

Use of a weighted table to determine the best location. As a practical aid in arriving at an equitable decision regarding the best office location, and more particularly as a help in giving the various factors involved the proper relative weight, the use of a

Fig. 2.—Location Table.

simple table, as shown in Figure 2, will be found helpful. The procedure for preparing and using such a table is simply to list in the left-hand column, as shown, all of the factors which in any way influence the choice of the site. Each main group of factors is then given a weight, thereby enabling evaluation of all factors in terms of one another. For example, convenience to customers would obviously be an outstanding factor in the case of a retail-store location, and thus would be given a greater weight than any other single factor, and very possibly as much weight as all other factors combined. On the other hand, the question of convenience to customers in the case of a mail-order house would be of prac-

tically no importance, but nearness to railway, express, and mail facilities would be of the greatest importance. For the sake of convenience, the total weight assigned to all factors may be arbitrarily fixed at 100.

Having decided upon the total weight to be allowed each factor, the next step is to evaluate in accordance with one's own opinion the worth of the various sites under consideration. For example, assume that Columns A, B, and C in the form represent three possible locations. If nearness to outside service facilities carried a total weight of fifteen, one might assign a weight of eight to location A, ten to location B, and thirteen to location C, thus indicating that while none of the sites is regarded as perfect from the standpoint of nearness to service facilities, site C is better than either A or B. The last step, of course, is to total the individual weights in each of the columns and determine the one nearest the ideal location, that is, 100 points.

Features of an office lease. When the building itself and the space within the building have been selected, the next step is to take care of the legal matters connected with the leasing of the office. While this is a matter that in most cases the company will wish its lawyers to look into, it is desirable that the office manager have at least a general knowledge of the usual provisions of a lease covering office space, and of those things for which the owner is responsible and those for which the tenant is responsible.

Among the points which leases for office space usually include are the following:

1. Names of the parties to the contract.
2. Date of the contract.
3. Date and sometimes the hour at which the term begins and expires.
4. Description or designation of the space leased.
5. Rental and method of payment. Usually the annual rent is stated, subdivided into smaller units to be paid on specified dates.
6. Provisions regarding the rights and obligations of each party and what will be held to nullify the contract.
7. Signatures of both parties to the contract.
8. Acknowledgment before a notary if required by statute.

The items which the owner is expected to provide and those which the tenant usually provides are shown below:

*Provided by Owner*

Elevators	
Washrooms and toilets	
Lighting fixtures and wiring	

*Provided by Tenant*

Conveyors	
Floor coverings	
Buzzers and annunciators	

<i>Provided by Owner</i>	<i>Provided by Tenant</i>
Radiators	Intercommunicating telephones
Window shades	Ventilators and fans
Fire-protection apparatus	Awnings
Fireproof stairways	Clocks
	Water coolers or fountains
	Storage vaults
	Partitions and railings
	Electric lamps
	Lighting fixtures (other than the standard building fixtures)
	Towel and soap service
	Venetian blinds

Moving the office to the new location. Having selected the site and signed the lease, the last step is to move the office from the old location to the new. Plans for moving an office should be preceded by the preparation of a template layout showing the position of each piece of furniture and equipment in the new location. The subject of office layout, however, is taken up in detail in Chapter 5, and the discussion here, therefore, is confined simply to the work of moving.

Assuming that the proposed layout has already been decided upon, and that it has had the approval of the department heads and other executives, the first step is to tag each piece of furniture and equipment in the present office and to number each template on the layout chart accordingly. This gives those in charge a definite plan on which to work. In this connection it will be found helpful to assign a general number or letter to each room or bay in the new location. If more than one floor is to be occupied, the floor number should, of course, also be indicated. Thus, for example, in moving an office of any considerable size, the movers learn, after two or three trips, which location "14-A" is, and consequently know at once the general location of any particular piece of furniture. The specific place where each piece of furniture and equipment is to go, as shown on the chart, is then given them by the office manager's assistant in charge of that room.

A week or more before the day set for the actual moving, the office manager should provide each clerk with a set of specific detailed instructions which will tell him just what he is expected to do and how it is to be done. These instructions should include such information as how papers and miscellaneous desk equipment are to be packed and marked, where packing materials are to be

secured, what disposition is to be made of the completed packages, how desk drawers are to be locked or fastened in place, and so on. Similar instructions should also be prepared and issued to department heads and section supervisors; but naturally in this case more information will be given, together with a carefully worded request for their coöperation.

When these preliminary plans and instructions are completed, the office manager should select a sufficient number of competent persons to assist him and to act as guides for the movers on the moving day. These assistants may or may not be employees who are regularly under the supervision of the office manager, but they should be chosen with the qualities of ability to follow instructions, cool-headedness, and initiative uppermost in mind. The general plans, as well as the specific part which each one is to take in the moving, should be thoroughly and carefully explained to each one. Enough such assistants should be chosen so that there will be at least one man in every room in both the new and the old location, as well as one or two extra men for general purposes.

No matter how carefully thought out the preliminary plans may seem to be, there are almost always difficulties that may delay or even seriously upset the execution of the plans. Experienced office-moving companies can easily point out possibilities in this direction, particularly if their contract is for the job as a whole rather than by the hour. In addition, the office manager will do well to ask other office managers who have been through the experience before what unforeseen difficulties they encountered. While it is perhaps too optimistic to hope that all such contingencies will be foreseen and provided for, nevertheless, it is true that the more careful and scientific the planning, the fewer the chances of unforeseen difficulties interfering with the carrying out of the plans.

**What to do on moving day.** The work to be done by the office manager himself on moving day consists largely of supervising the execution of the prearranged plans. If the move is to be made between Saturday noon and Monday morning, as is sometimes the case, presumably only the office manager and those whom he has selected as his assistants will be on hand. If, however, it is necessary to move on a week day, it is best to dismiss the whole force for that day rather than to attempt to utilize their services in the moving process, as generally they will be more of a hindrance than a help.

It is important that during the moving day the office manager

himself stay in one place, or at the most divide his time between one definite location in the new place and another in the old one, so that his assistants will know where to reach him quickly if his advice is needed, as it surely will be. Anyone who has moved an office or assisted in that task will appreciate the difficulties which are almost sure to arise when there is but one person who can be called on for instructions to cover special cases, and, because he is constantly rushing back and forth between the old and the new locations, decisions must be delayed and men kept waiting until he can be found.

One practical plan is for the office manager to appoint one person as his first assistant. The office manager can then take general charge of the incoming equipment in the new location, leaving his assistant to supervise the movement from the old location. At the end of three or four hours the office manager should make a check-up on the equipment which still remains in the old office; at this time he can change places with his first assistant if that seems desirable.

When the movers have reported the last piece of equipment moved from the old location and placed in the new one, the office manager should verify this statement by a personal inspection. If conditions are found to be satisfactory, he is then ready to perform his last duty in connection with moving, namely, that of seeing that the mechanical equipment, such as telephone connections, buzzer and internal communicating systems, electrical office equipment, and so on, is in working order.

If the change of office location is being made between Saturday noon and Monday morning, the moving itself will, in most cases, be completed by Saturday evening, leaving the office manager all day Sunday in which to attend to these mechanical adjustments. Overtime rates for electrical and other skilled mechanics are, of course, rather high; but the office manager will be more than justified in including in his estimate of moving costs the wage of at least one competent mechanic and his helper, so that the necessary connections may be made before Monday morning. The cost of time lost by clerks and delays in getting the work started promptly in the new location will be found to be far in excess of any reasonable outlay for mechanics' wages for overtime work.

Theoretically, it should be possible to pick up the threads, so to speak, on Monday morning in the new location, just where they were laid down the previous Saturday noon in the old office, and thus continue the work in the usual way. One occasionally even

# *Physical Factors in Office Planning*

The importance of physical factors. In choosing an office location, and more particularly in planning the interior layout, it is essential that adequate consideration be given to what are usually called physical factors. These include the size and the shape of the building, building facilities, storage facilities, lighting, heating and ventilation, including air conditioning, floors, floor coverings, communicating systems, partitions, noise-reducing facilities, and electrical facilities, as well as office maintenance. Although certain changes can be made, of course, after the space is occupied, each of these points should be carefully considered at the time the layout is being planned. Because of their importance, this chapter will be devoted entirely to a discussion of physical factors, while in the next chapter consideration will be given to making the office layout itself.

Size and shape of the building. There are several important factors regarding the size and shape of the structure itself which should be considered by any company which is planning the erection of a building of its own. Even if any substantial amount of rented space is to be occupied, they should be given careful consideration.

In deciding upon the amount of space needed, the total number of square feet is by no means the only consideration. Large rectangular areas obviously are preferable to long, narrow spaces, or to a series of small odd-shaped spaces. The shape of the building itself is also important. Buildings having the general shape of the letters U, H, T, or E are considered most desirable, both from the standpoint of their adaptability to the best interior layout and in connection with opportunities for future expansion. Moreover, such shapes insure maximum lighting and ventilation. Floors should be planned to facilitate the joining of several sections to meet expansion requirements, or, where adjoining ground is avail-

able, provision for the future may be made by planning so that additional wings may later be added. In other cases, provision may be made for the addition of stories.

Building facilities. Building facilities include freight and passenger elevators, wash rooms, toilets, and locker rooms.

It is almost trite to say that passengers and freight should not be carried on the same elevator. Convenience to employees and customers, and greater dispatch in handling both passengers and freight, as well as a vastly better impression on callers, are all obvious advantages of making this separation.

The problem of providing adequate passenger elevator service in an office building, however, is not always a simple one. This is particularly true in buildings occupied entirely by a single company, because in such cases there is a distinct tendency towards concentration within a very limited period of the time of arrival and departure. In one case, for example, congestion around the elevator entrances on the ground floor became so great that a rather serious problem of lateness developed. Investigation showed that sometimes as much as ten minutes elapsed between the time an employee arrived in the building downstairs and the time she was actually seated at her desk ready for work. As a result, a stagger system of departmental working hours was put into effect whereby certain departments started work at 8:30 and left at 4:30, others commenced at 8:45 and stopped at 4:45, and so on to the last group, who arrived at 9:15 and left at 5:15.

In large buildings the problem of congestion is usually satisfactorily solved by providing several banks of elevators, each of which serves only a given series of floors. Modern elevator equipment, including high-speed electrically operated cars, automatic door-opening and closing devices, and electric control mechanisms, whereby the car stops only on the floors from which a waiting passenger has signaled, also has materially increased both the capacity and speed of elevator service. One method frequently used effectively to modernize older office buildings is to install new elevator equipment. The leading elevator manufacturers have accumulated considerable worthwhile data on the subject of elevator arrangements, speeds, capacities, and so forth, and are always glad of an opportunity to coöperate with a present or prospective user of their equipment.

Coat rooms and lockers. The use of coat rooms, either centralized or provided for departmentally, in contrast to the advis-

ability of installing lockers, is a debatable point. It is generally agreed that the decentralized coat room or locker arrangement rather than the plan under which all employees check their wraps at a central point, is preferable, especially in view of the fact that a better control over the time spent by employees in getting settled down in the morning and preparing to leave in the evening is secured. The majority of buildings erected within the last few years have the decentralized or departmental arrangement.

Lockers provide perhaps the best method of taking care of coats and hats of employees in medium-sized or small offices. Any disadvantage due to the amount of floor space required may be largely overcome by use of a type of locker which consists of a group of three units and measures fifty-four inches in length, twenty-one inches in depth, and six feet six inches in height. Since the three units will comfortably take care of the belongings of eight people, it is apparent that less than one square foot of space per person is required.

Wash rooms. The decentralization of wash room and toilet facilities, so arranged as to serve adequately the needs of adjacent departments, is also regarded as the best practice, owing, again, to the closer control which can be exercised by department heads or section supervisors over the time spent by employees away from their desks. In no case should it be necessary for any employee to go more than one floor away to reach these facilities.

Storage facilities. The need for storage facilities is very frequently underestimated in calculating the total amount of space needed and the layout of departments within the space. Indeed, it may be truthfully said that the intelligent use of storage space frequently makes the difference between an orderly and effective office layout and one which is cluttered up so badly as to make expeditious procedure almost out of the question. If a new building is to be constructed, the entire space below the ground floor should be reserved for storage purposes, and the temptation to divert this space to the use of clerical employees should be discouraged. When space already constructed is being rented, however, there are a number of other devices which may be employed to give additional storage space. For example, if counters are necessary, counter-height file units may be installed, the space behind and under the counter being used either for vertical filing purposes or as storage space for miscellaneous supplies, depending upon the uses which the counter serves and the type of equipment

bought. In the same way space over wash cabinets, clothes cabinets, and telephone booths can be built over for storage purposes without detracting from the appearance of the room. These suggestions are based on the obvious fact that while a company pays for square feet, it actually gets cubical content.

Office lighting. Despite the emphasis which has been placed upon the importance of proper lighting to the quality and quantity of office production, a Dartnell Survey of twenty large representative offices in the Chicago area indicates that offices today furnish, on the average, only from 46 to 73 per cent of the minimum amounts of illumination recommended for office tasks by the Illuminating Engineering Society.<sup>1</sup> Office workers are not getting the light they need for efficient work; unnecessary errors, eyestrain, and fatigue are the result.

It is well recognized that the best possible light is daylight. Offices which have the largest amount of natural light, therefore, command a higher rent than those less favorably located. Twenty-five to fifty cents per square foot per year often represents the charge for daylight alone. However, natural light requires careful treatment in order that it may aid, rather than hinder, the office worker. On the south and west sides of the building the sunlight causes excessive glare during certain hours of the day. Venetian blinds should be used to deflect this light ceilingward, thus diffusing it. In addition, natural light does not penetrate in sufficient volume more than twenty or twenty-five feet from the windows. This means that in most offices certain areas must always be lighted artificially. The importance of lighting and ventilation is so great that several office buildings have been constructed entirely without windows, utilizing artificial lighting and air conditioning, thus attempting to control these factors without the interference of sunlight, temperature, and humidity. The offices of the Hershey Chocolate Company at Hershey, Pennsylvania, the United States Time Corporation at Middlebury, Connecticut, and the Despatch Oven Company at Minneapolis, Minnesota, are three examples.

There are five systems of light control, all of which are used in offices:<sup>2</sup>

Fig. 3.—Direct Lighting.

Ninety to 100 per cent of the light is directed downward in angles below the horizontal.

Fig. 4.—Semi-direct Lighting.

Sixty to 90 per cent of the light output is directed downward.

### LIGHT TERMS AND THEIR MEASUREMENT<sup>2</sup>

Illumination. The foot-candle is the unit of measurement of illumination and is defined as the illumination on a surface which is one foot distant from and perpendicular to a source of one candlepower.

The various models of direct reading photo cell foot-candle meters now available commercially may be used to measure this factor. Meter corrected for all colors of light are recommended and frequent calibration is necessary to maintain accuracy.

Foot-candle readings are used to designate the illumination on a surface at any point, or the average illumination on a surface. It is the most commonly used term to describe a lighting installation, but it should always be remembered that it only designates the quantity of light flux reaching a surface—it reveals nothing of the quality (diffusion, lack of glare, direction, color, etc.) of the illumination.

### RECOMMENDED LEVELS OF ILLUMINATION FOR OFFICES

Foot-candle levels in the following tables are to be regarded as "average in service" on the normal work plane whether vertical, horizontal, or at some oblique angle:

	Foot-candles Modrn Practice
Bookkeeping, Typing, and Accounting .....	50
Business Machines—Calculators, Key Punch, Bookkeeping— Local Illumination .....	100
Conference Room—General Meetings .....	30
Desk Work	
Intermittent Reading and Writing .....	30
Prolonged Close Work, Computing, Studying, Designing, Reading Blueprints and Plans .....	50
Filing and Index References .....	30
Lobby .....	20
Mail Sorting .....	30
Reception Rooms .....	20
Stenographic Work—Prolonged Reading, Shorthand Notes .....	50
Vault .....	10

improperly shielded lamp (incandescent, vapor, or fluorescent) in line of view (direct glare); from (b) reflected highlights on shiny, polished surfaces (reflected glare); or from (c) large areas of relatively low brightness in direct view, such as might occur from inbuilt glass panels on low ceilings in a long room, or from unshaded glass block walls. These glare situations can be avoided by careful location of lighting equipment, by shielding all light sources, and by a proper balance of the brightness of all surfaces and lighting elements in direct line of view.

Objects which have a low intrinsic brightness may become glare sources when viewed against dark backgrounds. For instance, luminous glass panels inserted in dark ceilings or walls can readily become objectionable glare sources even though their average brightness expressed in foot-lamberts is low. Good practice demands that the brightness ratio between the luminous element and its background or surroundings shall not exceed three to one when seeing comfort is of major concern.

#### REFLECTION FACTORS OF TYPICAL COLORED FINISHES FOR INTERIORS

Color	<i>Average Reflection Factors*</i>	
	Filament and White Fluorescent Lighting	Daylight Fluorescent Lighting
White .....	.88	.88
Very Light		
Blue-green .....	.76	.76
Cream .....	.81	.79
Blue .....	.65	.66
Buff .....	.76	.73
Grey .....	.83	.83
Light		
Blue-green .....	.72	.72
Cream .....	.79	.76
Blue .....	.55	.57
Buff .....	.70	.67
Grey .....	.73	.73
Medium		
Blue-green .....	.54	.54
Yellow .....	.65	.60
Buff .....	.63	.59
Grey .....	.61	.61
Dark		
Blue .....	.08	.09
Yellow .....	.50	.45
Brown .....	.10	.09
Grey .....	.25	.25
Green .....	.07	.07
Wood Finishes		
Maple .....	.42	.41
Walnut .....	.16	.15
Mahogany .....	.12	.09

\* Due to the spectral differences of filament and fluorescent lamps and the selective reflection characteristics of the various colored finishes, two reflection factors are given for each color.

Next he installed new lamps, and the average foot-candles in the eight locations leaped to 35.5. As a final rejuvenating measure, he had the voltage corrected, and the average shot up to 46.2 foot-candles as compared to the original 11.8. The company had been paying for light it didn't get.

The office administrator will find the following profitable reading in terms of human maintenance as well as office efficiency. It has been demonstrated often that to neglect illumination not only cuts down facility for work and accuracy but also constitutes a general drain upon the physical system of the office worker.

This office lighting was delivering only 26.0 per cent when, according to the best illuminating practices, it should have been giving at least 75.0 per cent of the illumination that was available when installed.

#### "DO YOU GET AS MUCH LIGHT AS YOU PAY FOR?"

CHART OF BIRMINGHAM RESULTS

	Foot-Candles as Found	Foot-Candles after Cleaning Walls and Ceilings	Foot-Candles after Fixtures Cleaned	Foot-Candles with New Lamps	Foot-Candles with Corrected Voltage
Location 1 .....	15.0	18.0	23.0	42.0	55.0
Location 2 .....	14.0	17.0	21.0	41.0	55.0
Location 3 .....	8.0	13.0	16.0	30.0	37.0

Average in percentage of maximum .....	26.0%	35.0%	43.0%	77.0%	100.0%
Percentage of increase due to each factor ..	...	35.6%	26.0%	77.0%	30.0%
Increase in percentage relative to total light as 100% .....	...	16.0%	13.0%	31.0%	14.0%

**Color.** The paint industry has recently introduced the new profession of "color engineering" to the American public. By tossing the popular fallacy "color is for decoration" into the waste-basket, the color engineer utilizes the energy in color to perform specific tasks and to pay dividends on its cost. As William W. Krug, of E. I. du Pont de Nemours & Co., puts it:<sup>6</sup>

. The greatest benefit to the office worker is that color can be coordinated with artificial and/or natural light to create uniform seeing conditions.

<sup>6</sup> Krug, W. W., "Use of Color for Office Painting." *The Office*, March, 1946, p. 37.

Objectively, muscular eyestrain is reduced by creation of a color environment of an even brightness ratio. By elimination of sharp color contrasts, the constant pupillary adjustment so frequently experienced under prevalent working conditions disappears. The worker's visual acuity, not to mention his general state of health, is greatly improved.

Properly applied, color emphasizes important elements and subordinates relatively unimportant subjects; color shortens or lengthens the appearance of an area; color "raises or lowers" ceilings. By actual statistics and merchandising records it is well known which colors appeal most to the male and to the female; which colors quickly attract the attention of the eye. Color engineering takes all these facts into consideration, combines them into a plan with a purpose, and completely eliminates the distraction and confusion formerly prevalent when color guesswork was the theme.

buildings, has been enthusiastically accepted, and is widely recognized as an essential component of a highly efficient and productive endeavor. Color conditioning has a leading role to play in your organization and, thanks to this relatively new science of color engineering, its success is assured.

Heating, ventilation, and air conditioning. The fact that the proper heating and ventilation of an office have a direct effect upon the health and efficiency of office workers is well recognized. The matter of heating is usually well taken care of, except that there is a tendency to overheat offices. The ideal temperature for an office is sixty-eight degrees F. The development of methods of thermostatic control has largely done away with the exercise of individual preference in heating on the part of the clerk who happens to be sitting nearest the radiator valve.

Office ventilation and air conditioning, on the other hand, are still complex problems about which there is yet much to be learned. Fundamentally, the problem of the ventilating engineer is to introduce an abundance of fresh air and, after cleaning it and adjusting its humidity, to provide means for removing foul air, and to maintain a constant circulation of air without creating a direct draft. The fact that correct ventilation is important, however, is shown by the experience of a number of companies. For example, one concern computed the approximate loss involved through colds contracted by its employees, largely as the result of faulty ventilation, at twenty-four dollars per employee. Another manufacturer reduced the amount of winter sickness among his employees from 27 to 7 per cent by installing a ventilating system, after a thoroughly scientific survey had been made. In a third case, a New York banking institution, by furnishing proper atmospheric conditions, increased the output of each individual employee sufficiently to allow a reduction of 4 per cent in the working force.

While the installation and operation of ventilating and air conditioning equipment are highly technical matters with which the office manager is not usually expected to be conversant, he should be familiar with the types of equipment and systems available.

#### *Ventilating Equipment*

Wall fans—local areas.

Intake and exhaust fans—local areas.

Central ventilating duct systems with centrally located blower mechanism. Such systems might have equipment added to filter the air and heat it in cold weather—extensive areas.

*Air Conditioning Equipment*

Single office unit, operating at window. Intake fan, heating, and cooling equipment—local area.

Central unit. Equipment brings in air, filters, and washes it, adjusts the humidity, cools or heats it to the desired temperature, and circulates it through entire building or entire area of occupancy.

**Floors and floor coverings.** The type of floor covering best suited to an office is not merely a matter of individual taste or wish. Other considerations, such as fatigue, the elimination of noise, the general appearance of the office, durability, original cost, and maintenance expense, are among the factors which must be considered. The usual kinds of floors and floor coverings used in offices are carpets and rugs, concrete (painted and unpainted), cork, linoleum, marble, mineral compositions, plastic materials (usually asphaltic base), rubber, and wood. Quarter-inch battleship linoleum, various rubber coverings, and asphalt tile are most frequently used. Bare concrete is seldom used, because in a number of cases it has been thought that colds, rheumatism, and even tuberculosis have been contracted by persons forced to sit at a desk all day with their feet resting on the concrete itself. Rugs and carpets are chiefly used in private offices, although in a number of larger office buildings they are also used in foyers and hallways.

**Communicating systems.** It is often more economical, sometimes imperative, that provision for communicating systems be made in the early stages of office planning. A full discussion of the various systems available appears in Chapter 6.

**Partitions and railings.** The tendency is away from private offices and the use of small single rooms in which only a few clerks can be placed. In many banks, for example, department heads are placed out with their departments, while officers whose work brings them constantly in touch with customers are almost always located on the "platform" in the open. Further consideration is given to the question of private offices in relation to office layout in the next chapter.

If it is imperative that all noise be shut out from a room, plaster partitions must be used, since wood and glass are not entirely soundproof. Even in this case, however, such rooms usually contain transoms for ventilating purposes. While rooms with plaster partitions are fairly soundproof, they have the marked disadvantage of shutting out light from the other parts of the office. In addi-

tion, they take up more room than either wood or glass and are expensive to take down and practically impossible to move from one place to another. Wood and glass partitions, on the other hand, are usually built in sections and may be moved from one location to another. The glass used in partitions may be either clear or obscure. In recent years many companies have adopted partitions made of steel and glass, similar in design and outward appearance to the wood and glass structure. While steel is more durable than wood, it is also more expensive, and, since wooden railings are usually used in offices, the combination of steel partitions and wooden railings may not be desirable. Steel railings and gates, however, may be purchased to go with the steel and glass partitions if one so desires.

Spindle railings rather than solid wood panels are now regarded as the best, since the latter give the impression of heaviness and more quickly show wear. Posts for railings should not be fastened to the walls or partitions, but to the floor only. If the floor is of concrete, a steel rod may be sunk into the concrete and extended upward.

Noise-reducing facilities. The problem of noise reduction and sound absorption is becoming more and more important, because of the increasing volume of exterior noises in large cities, and because of the extended introduction of office machinery. Noise is a contributing element to fatigue, and it is, therefore, important that it be minimized as far as possible. Three types of treatment for walls which will aid in reducing noise are felt, Acousti-Celotex, and porous plaster. The felt method is the oldest. Cattle-hair felt, hair-and-asbestos felt, and a felt made from wood pulp are most often used. Under this method the ceiling surface receiving the treatment is first paneled with wood strips. The felt is then fastened between the wood grounds and covered with painted muslin, or perforated oilcloth. It is customary to leave an air space between the felt and the cloth. Acousti-Celotex is installed in tile form, the tile having sound-absorbing perforations. This is a semi-structural form of treatment and can be decorated with practically no change in efficiency. No cloth covering is required. The two best-known porous plasters on the market are Sabinite and Guastavino plaster. Other felts and acoustical tile available are Fibrestone, Fibretex, Sana-Acoustic, and the like.

Acoustical treatments are to be found in a number of large companies. A large department store in New York City, for example,

uses both the felt with the cloth covering and the Acousti-Celotex. A well-known manufacturing company uses all three available acoustic materials—felt, plaster, and fiber board.

Despite the important effect which undue noise has on efficiency, the office manager in the ordinary situation is likely to have some difficulty in securing favorable action on the matter by chief executives, largely because of their ignorance of the matter. However, there are a number of steps, some of which are relatively inexpensive, which he can take to reduce noise. He can:

duly expensive merely because the necessary electrical facilities are not available.

**Other physical factors.** In addition to those already mentioned, there are several other physical factors which must be considered in connection with office construction and layout. Among them are:

*Buzzer systems.* The number of call buttons, buzzers, and annunciation drop boxes should be kept to a minimum. Buzzer-call layouts are expensive to install originally, and expensive to move later on.

*Drinking water.* Unit drinking water coolers of the electric refrigerator or ice-cooler type are preferable to a central system piped to several locations. This is particularly true in periods of retrenchment where certain floors are vacated entirely and therefore the use of many outlets is lost.

*Clocks.* If wall clocks are necessary, individual electric clocks are preferable, from the standpoint of flexibility, to a central timing system. The original cost of central timing systems is relatively high, and changes are rather expensive.

*Cashiers' cages, counters, and so on.* Portable equipment, such as counter-height steel units and standard steel or wood and glass front partitions with wicket windows, present a good appearance, are inexpensive, and are easy to move, if necessary.

*Shelving.* Except in isolated instances where permanency can be guaranteed, the use of wooden shelving for supplies, counters, and so forth should be avoided. Standard steel shelving costs little more and can be moved easily.

*Office maintenance.* Where space is rented, the tenant, as has already been said, is not expected to do any current maintenance work. Where the building is owned or completely occupied by a company, however, maintenance becomes a problem of considerable importance. Since the building superintendent, who is in direct charge of building maintenance, often reports to the office manager, it is important that the latter have some knowledge of office-building maintenance matters.

The first step is to work out a plan of building inspection and maintenance that will adequately cover the various parts of the building and types of equipment which must be serviced, but which at the same time will keep maintenance costs within a reasonable limit. For example, it is obvious that the maintenance of clean lighting fixtures, ceilings, and windows is of very consider-

able importance and has a direct relation to office efficiency. For this reason a regular schedule of cleaning should be worked out, so that lighting fixtures are cleaned at least every two weeks and windows at least once a month, preferably twice a month. Similarly, the care and cleaning of lavatories and wash rooms is a matter which merits constant attention. Elevator maintenance is an obvious necessity, the importance of which cannot be too greatly stressed. The maintenance plan should provide for the periodic treatment of furniture in order to keep the wood surfaces in proper condition.

X : 8 M      H9      55524.

Floors, of course, should be swept every night. Sweeping, however, does not remove all the dirt, and, consequently, provision must be made for occasional washing or scrubbing. The office manager or building superintendent, however, should be sure that the scrubbing accomplishes something more than a more equal distribution of the dirt. In some companies the linoleum floors are scrubbed once a year with a soft cleaning powder and then mopped with clean water after the scum from the scrubbing machine has been sucked from the floor by a special machine. After the floors are thoroughly dry, a liquid wax is applied by using soft brushes on the same machine that was used for scrubbing. Once the floors are treated, no water is used on these floors until it is necessary to scrub them again, which is usually a year or more later. This system of treating floors is reported to have proved to be a practical time and money saver.

Cleaning activity in Rockefeller Center, New York. One of the largest individual office cleaning operations in the United States takes place within Rockefeller Center, New York, a unique "city-within-a-city," consisting of fourteen buildings, containing almost 5,300,000 square feet of rentable area, and housing 30,000 people. There are, of course, a great variety of tenants in these buildings, each having various characteristics and different requirements. Almost all of the tenants receive cleaning services in accordance with standard lease agreements.

According to Mr. George M. Hopkinson, Superintendent for Rockefeller Center, most of the cleaning work must be done at night because of the public character of the buildings and the fact that the offices are fully occupied during daytime. For this reason and because of the size of the development, it has been found more efficient to break down the cleaning work into more detailed and specialized operations than is customary in other buildings.

Particular care is taken in the selection of cleaning personnel. The ability to read and write is necessary so that orders may be properly executed. Whenever possible, promotions are made from within the organization: all women supervisors have been promoted from cleaning women. All candidates must pass a physical examination, and all but a few of the women workers are married with families to support.

Every effort is made to safeguard against accidents. A first aid hospital, supervised by a registered nurse and a doctor in attendance, is open continuously. All accidents must be reported and treated the day of their occurrence to prevent infection. This precaution has resulted in a very small percentage of accidents involving loss of time.

The cleaning personnel consists of 675 individuals, the great majority of whom are on night duty. The night force is headed by one night supervisor, two assistants, seven night foremen, and nine foreladies, making a total supervisory staff of nineteen for night work. The supervisor is responsible for all floors throughout the development. Night cleaning women perform all duties except rug cleaning, high dusting, partition oiling, partition glass cleaning, glass desk top washing, and spotting. These items are handled by special porter crews.

The supervisory staff for the day force consists of one day supervisor, two assistants, seven day foremen, one chief matron, one chief window cleaning foreman, and an assistant.

There are numerous male cleaning crews for the following duties: cleaning light fixtures, vacuum cleaning, high dusting, floor polishing, waxing and scrubbing, rubbish disposal, glass polishing, cleaning furniture and rugs, urinals, sidewalks, and wall washing.

Women workers report at 7:15 P.M. at central points, their hours being from 7:15 P.M. to 1:15 A.M. Supplies are issued by a storekeeper, and orders for midnight lunch are taken for later delivery to the workers in their place of work. Each woman works alone. The sequence of work is (a) emptying waste baskets into a sack, leaving the sack outside the elevators, (b) sweeping the floors or mopping where necessary, (c) cleaning ash trays, (d) dusting furniture and the tops of filing cabinets.

# 5

## *Making the Office Layout*

The importance of layout. In practice, location, physical factors, and layout must be considered together. For our purposes, however, it has been necessary to deal with each separately. Location and physical factors have been discussed in the two preceding chapters. We are ready now to consider the matter of layout itself.

Ever since Mr. Taylor pointed out the importance of the proper layout of factory departments, industrial executives have given a great deal of attention to the place which each working section occupies in the plant. So important has this matter become that no experienced factory executive would consider the erection of a plant without giving very serious study to departmental layout.

Most businessmen recognize that careful attention should also be given to office layout. To appreciate the dollar-and-cents value of conserving office space, it is only necessary to point out that a saving of a square foot of space in fifty different places, such as aisles, hallways, private offices, and so on, represents a net economy of \$1,000, assuming a cost of four dollars per square foot per year on a five-year lease.

Factors involved in office layout. The fundamental principles of an efficient and practical office layout can be easily and simply stated. The work should move in as straight a line or as continuously in one direction as possible, and the number of people employed on each operation should be properly adjusted to the amount of work to be done. It is obvious, for example, that, if operation C takes twice as long as operation B, assuming that the work goes from B to C directly, there should be twice as many employees in section C as in section B. If this adjustment is not made, constant congestion of work at operation C will inevitably result.

In practice, however, these ideals can rarely, if ever, be attained. The layout and construction of a well-planned mail-order house, however, is an excellent example of a case in which careful fore-thought and planning have made it possible to reach the ideal to a very considerable extent. In one such company, incoming bags of mail are opened on the top floor. From this point the various orders and records progress downward from floor to floor, through the merchandise stock rooms and other departments, to the street floor, where the completed order is assembled and made ready for shipment. While, of course, it is not always possible to secure as direct a flow of work as this, the office manager should keep the principle which this arrangement illustrates in mind when considering layout problems.

Existing departmental divisions. The main and the departmental divisions of a business constitute the basic structure upon which the layout of the departments should be planned. Related departments should be placed adjacent or close to each other. In a department store, for example, merchandising, publicity, control, and store operation constitute the four basic divisions of the business. The control function, however, may be further subdivided into general accounting, expense control, accounts payable, credits and collections, inventory, statistics, and general office management. The credit and collection department, for example, has need frequently to consult the bookkeeping or accounting department for information regarding the volume of purchases and payments of various customers. These two departments should, therefore, be placed near one another. On the other hand, if a centralized filing department or stenographic department is contemplated which will serve the executives of all departments, it should be placed in as central a location as possible.

Building around major departments. Consideration of major departments and their relation to office layout develops in turn another principle of office layout which is of very practical importance. This is the fact that, in planning for future expansion, one should provide for growth in major departments, rather than in minor ones. For example, the existence of a sizable bookkeeping department should not be considered the sole reason for anticipating still larger requirements for that section alone in the future. Rather, one should consider the financial division in its entirety, and thus think of the bookkeeping department, not as a unit in itself, but as a unit in relation to the size and work of the

other sections of the entire financial division and in relation to the probable growth of the company as a whole.

Flow of work. Closely related to the question of departmental divisions is that of the existing or proposed flow of work through the office. In every business one will find a certain series of operations around which all other activities in the office more or less revolve. For example, in a mail-order house the customer's order is the unit of consideration, and the major operations, therefore, have to do with the steps which are taken in dispatching the order. In an insurance company the receipt and transmission of an insurance application and policy form the dominating routine. While subsidiary or minor operations or paths of work which intersect the major one may exist, they should be regarded as activities of minor importance, in contrast to the major activities.

Analysis of the work to be done. From the discussion in the foregoing sections it is apparent that in order to plan an office layout properly one must consider not only the departmental divisions and the sequence of the major operations, but the number of employees and the volume of work. To analyze this situation fully and to ascertain for each employee and each working unit the kind and amount of work turned out, both regularly and periodically, is a very considerable undertaking. In fact, it is a task which, because of its very complexity, has been too largely neglected in the average office.

Private offices. The number of private offices to be provided, and their location, is a matter of obvious practical importance in making an office layout. The private-office question is a debatable one and, unfortunately, it sometimes becomes quite a sore point among company executives. There are many circumstances under which private offices are necessary, or at least extremely desirable. The work of the purchasing agent in a manufacturing concern, who is engaged in interviewing salesmen a good part of each day, is a case in point. The work of the copy writer or of the artist in an advertising agency is another example. The nature of the interviews which most corporation officials have with outsiders, as well as of the innumerable informal conferences with employees and subordinates, practically makes it necessary that such persons have private offices.

On the other hand, as stated in the preceding chapter, the tendency is away from the private office. More and more one will find department heads being placed out in the room with their sub-

ordinates, separated from them perhaps only by a railing. The old arrangement, whereby everybody who had someone else working for him assumed that he was entitled to a private office, is largely disappearing, and in its place is coming an arrangement whereby even high officials may be separated from others only by a railing, if indeed that. Banking institutions have led the way in adopting open layouts, and an increasing number of industrial and commercial organizations are following suit.

Obviously no general rule can be given which the office manager can use to determine which executives of his organization should have private offices. The most that can be said is that important business executives are gradually growing less insistent about their "right" to a private office.

**Impression given by the office.** While it is true that one should not decorate a place of business solely for show purposes, it is also a well-established fact that the impression which an office makes, both on the casual visitor or customer and on the regular employee, often has a direct effect on their opinion of the company. An arrangement, for example, which suggests at once efficient and businesslike methods cannot fail to create a better impression than one in which confusion, noise, disarrangement, and untidiness prevail.

**Securing flexibility.** The necessity for a business to adapt itself to changes and varying needs makes it imperative that proper provisions be made for flexibility in office arrangement. "Office layout would be a simple matter," said the office manager of a company which had just moved into a building of its own, "if the organization would only stay put. We have planned for expansion, of course, but if there is one thing that the experience of the past seven years has taught me, it is not a definite, permanent, scheme of layout, but the fact that flexibility is the soul of growth and progress." This executive then proceeded to explain that the adoption of a plan of interchangeable unit partitions solved the problem of layout for his company, the matter of space for future expansion having already been taken care of in the erection of a recently constructed building. One authority states that on the average the space requirements of an office organization double every ten years, while another sets a minimum of five years as the period in the future for which requirements should be anticipated in selecting a location and planning the layout.

between desks in a horizontal row should be; and what space should be left for aisles. The question of aisle space alone must be weighed from many angles. For example, to what traffic are aisles subjected? Are files moved through the office on hand trucks, is equipment shifted from place to place? In the final analysis, allocation of aisle space must be based on careful appraisal of office traffic.

Incidentally, the War Department recently established an allowance of 5C square feet per person for 54-inch desks, 60 square feet for 60-inch desks and 100 to 500 square feet per person in a private office. These figures represent a reduction from earlier War Department standards.

Making the layout itself. The first step in making the office layout itself is to secure the working tools. These include a drawing board or table, a lettering pen, a ruling pen, a straight edge, a cork board for mounting floor plans, cardboard for cutting out templates of furniture and equipment, and glass-headed tacks for fastening the templates to the layout chart. Figure 8 shows templates such as are used for the more usual kinds of office furniture. Similar templates should be prepared for all equipment, machinery, and appliances that will take up floor space in the proposed layout.

The first actual step is to prepare a rough sketch of the present layout, with each piece of equipment and furniture indicated on it. Following this, the main paths which the work follows under the present arrangement should be drawn into the plan.

The second step is to consider such rearrangements of departments, of work, or of employees as are planned for the new space. At this point it may be desirable to make a detailed study of the nature of the work of each individual. If this is done, revisions will doubtless have to be made in the sequence of operations as they will be performed in the new layout, or under the new system.

The third step is to determine what of the old furniture will be discarded, what will be moved to the new location, and what new furniture must be secured. Lists or requisitions are then prepared for the guidance of the purchasing department in placing orders for new equipment needed. Similar lists of mechanical office appliances must also be prepared at this time.

When it has been ascertained what people are to occupy the various departments and what relation, from the standpoint of the type of work, each department will bear to the other, a rough layout is prepared, showing the various spaces in the new building which the departments will occupy, and the approximate place to be occupied by each employee.

The rough layout chart should then be checked by the office

manager and the various department heads jointly, and any necessary rearrangements made. Before preparing the final draft, the office manager should be sure that all questionable matters of arrangement have been fully and definitely decided upon by all concerned.

When the best possible arrangement of individuals and departments has been worked out, the fourth and final step is to prepare the finished layout chart. In this connection the use of a scale of one-quarter of an inch to a foot will be found most practical. Templates should be cut out of cardboard to indicate the various pieces of equipment, and numbered, colored, or otherwise identified so that there will be no difficulty in ascertaining quickly the kind of equipment or appliance referred to. In making the final layout it will be much less work if one department is planned at a time and the final approval of the arrangement secured from each department head in turn.

The completed and final template layout should then be photostated or otherwise reproduced so that a sufficient number of copies will be available for use where necessary. The original cork board with templates attached, however, from which the photograph was made, should be retained for possible future reference and use.

A procedure of the kind just described, while it takes time and requires considerable effort, will be fully justified by the decreased confusion, decreased loss of time on the part of the executives and clerks, decreased moving expenses, and general increased ability to move from the old to the new office with the smallest practical amount of delay and inconvenience.

*Typical layouts for modern offices.* Mr. Harold C. Pennicke, former associate of the late W. H. Leffingwell, discusses the basic layout pattern of desks and files, as follows:<sup>2</sup>

*Factors affecting space standards.* There are many things which can cause a variation in any space per clerk standard. Some of these are:

1. The size of the desks used; whether or not all desks are of uniform size in the layout of any particular unit of space.
2. The type of layout used; whether desks are placed in rows of single desks, in rows of two desks adjacent to each other, three desks adjacent, or in rows of desks placed end to end, or rows of desks placed back to back, or a combination of any of these arrangements in the same work area.
3. The size of the area; if from 100 to 500 sq. ft. per area unit, the

<sup>2</sup> Pennicke, H. C., "Layout Standards for Modern Offices," *The Office*, March and April, 1945.

attainable standards may be much higher than in areas of 500 sq. ft. or more.

4. The shape of the space and the confining walls or partitions; in smaller areas the number of doorways and their placement is important.

5. The size and the location of any service facilities such as stair and elevator wells, lobbies and public corridors, washroom and locker room facilities.

6. Other obstructions such as location of columns, heating and ventilating pipes, ducts and radiators.

7. The shape and size of bays and the placement of window openings; whether windows are located on one side, two sides or on three or four sides of the area.

8. The character and effectiveness of natural or artificial lighting; adequate artificial lighting, especially the fluorescent type, may make it possible to disregard the placement of windows as a natural light source except to see that the desks are not faced toward the light source.

9. The relative amount of space consumed by bulk equipment such as an unusual concentration of files as in a filing or in an accounting department as compared with the space required for clerical occupancy; mechanical equipment like tabulating, addressing or photocopying machines, can consume space entirely out of proportion to space required for clerks.

The above list, although comprehensive, is not necessarily complete as to all items which may affect the ultimate attainable space standard provided the best application is to be made of layout standards. In Figure 9 are shown the five principal arrangement plans (Plans 1 to 5), all based on using twenty-four 60" x 34" desks in the most common arrangements with each layout made according to the best rules of layout to provide adequate spacing between desks, with either direct access to an aisle for each clerk or a spacing allowance which would provide access without interruption of other clerks.

Fig. 9.—Typical Desk Layout Plans.

in buildings especially designed for clerical occupancy. It takes only a superficial examination of the figures to indicate that a standard of 50 sq. ft. per clerk, if it includes only the desks, chairs and necessary communicating aisles, is difficult to attain except under the most favorable circumstances. It can be attained in large areas of unobstructed space but only infrequently in smaller areas below 500 sq. ft. There-

Fig. 10.—Actual Layout of a Small Area, Showing the Use of Templates.

Files arranged in double rows, facing each other, spaced as shown in col. 4. Shaded portion is area given in table below.

FILES ARRANGED IN TWO FACING ROWS					
STEEL CORRESPONDENCE FILES 4 or 5 Drawer Type	ONE FILE UNIT MIN. REFERENCE	MIN. REFERENCE	DAILY INFREQUENT	DAILY FREQUENT	MAX. USAGE
*Depth of file in 1st row	30"	30"	30"	30"	30"
*Extended drawer, 1st row	28	28	28	28	28
Space for operator	0	0	18	18	18
Space to pass	0	0	0	18	18
Space for operator	0	0	0	0	18
*Extended drawer, 2nd row	0	0	0	0	28
*Depth of file in 2nd row	0	30	30	30	30
TOTAL LINEAL INCHES	58	88	106	124	170
SQUARE FEET CONSUMED (a)	6.0	9.2	11.0	13.0	17.7

\*These dimensions may vary slightly according to the make and style of the filing unit used.

(a) If the width of the file is taken as 15 inches, the square feet consumed by the files and spacing allowance would be as shown.

Fig. 11.—Typical File Layout Plans.

to 36" to permit other clerks to pass the filing clerk without disturbing her.

In large concentrations of filing units it is usually most economical of space to place the files in rows facing each other. For each two of such facing rows used in a layout the lineal inches and used area would be as shown in Figure 11 for files of the dimensions given.

The following illustrations will show how the square footage shown in the table can be used for space estimates of large or small concentrations of correspondence filing units:

For a single row of dead storage filing units use the amount, 6 sq. ft., shown at the bottom of Col. 1 and multiply this figure by as many files as may be used in each row of the layout. Thus, a row of 9 files would consume 54 sq. ft.; two rows of 9 files each would consume 108 sq. ft.

For each two rows of files arranged to face each other but used daily and for frequent usage, use the figure 13 sq. ft. (Col. 4) and multiply it by the number of files in one of the two facing rows. Thus if there were 20 files arranged in two facing rows of 10 files each, multiply the 13 sq. ft. by 10 and the result, 130 sq. ft., would be the space consumed by the 20 files placed in this arrangement.

Space computations for other bulk equipment can be obtained by measuring the overall area consumed by the equipment when arranged in operating position and adding the area required by the operator and the area required for an access aisle provided the equipment is not located adjacent to a regular communicating aisle in the proposed layout.

Make a schedule showing the area required by the clerical staff separate from the area required by bulk equipment. The total of these two figures will be the total estimate of space required for the clerical staff and its equipment. Arrangement of the figures by department or other organization unit will prove most convenient when using the schedule for the actual making of the layout.

# 6

## *Office Equipment and Appliances*

Dependence of the office on equipment and appliances. One has but to consider for a moment the tremendous dependence placed upon equipment and appliances in any office to realize at once the important part which these devices play in facilitating the handling of work in the modern business office. While the mechanizing of office operations has not kept full pace, perhaps, with the progress that has been made in factory work, recent years have witnessed cumulatively increasing attention to this subject.

In this chapter the advantages of using modern equipment and appliances, selection methods, standardization, usage, recording purchases and costs, and care and upkeep are discussed. Because of the expansion in the field of equipment and machinery, it is obviously impossible to describe, even briefly, the various appliances which are available. Instead, a brief description of each class of machine or equipment will serve to acquaint the reader with the possibilities of the equipment. For those who desire more specific information about individual machines, the *Office Machines Directory*, published by the National Research Committee of the National Office Management Association, provides a listing of the names and addresses of the manufacturers of the major types of office machines.

Reasons for increasing importance of office machinery. There are a number of reasons why machinery is of importance to the business office. For one thing the size of business organizations and the increase in clerical activities have made it necessary to find quicker and more effective ways of getting the office work done. Obviously, the use of modern office machinery is a distinct aid in this connection. Imagine, for example, the number of additional clerks who would be needed in the accounting department alone if no calculating machines were available! What would the modern office do without dictating machines, postage machines, cash registers, or punch-card equipment? No extended discussion is needed

to emphasize the absolute dependence of offices on equipment and appliances of all kinds.

Furthermore, business organizations are finding more and more that it is necessary to secure a great amount of detailed information of a statistical nature regarding the operation of the business and the work of their employees. In the field of sales management, for example, many companies analyze sales by salesmen, by territories, by customers, by price classes, by the average profit, and calculate the cost per call per salesman. It is obvious that such information is extremely valuable, but it is also equally apparent that the use of mechanical office appliances is essential if such information is to be secured quickly and at a reasonable cost.

The appliance manufacturers themselves have promoted business and general public interest in office machinery by extensive campaigns of local and national advertising, and through the National Business Shows. At these exhibits, which are held annually in a number of the larger cities of the country, including New York and Chicago, office equipment and appliances of all sorts are shown. Expert operators are on hand to demonstrate the machines, and sales representatives are ready and eager to answer any questions. All of the exhibitors issue free tickets of admittance to customers and prospects and, as a result, the exhibit rooms are usually crowded at all times during the week of the show. The results which may be secured from an exhibit at the National Business Show by equipment manufacturers are shown in the statement made to the writer by the sales manager of one exhibiting company, who said that out of eighty live prospects developed as the direct result of the Show, thirty-five had been sold within one month and, if past averages held, fifty out of the original eighty would buy eventually.

Advantages of using mechanical devices. Among the advantages which accrue to an office in which the maximum use is made of mechanical devices are the following:

1. Records can be produced more conveniently, more quickly, more legibly, and with a better appearance than in cases where the same work is done by hand.
2. Owing to the fact that the installation of a machine often permits a reduction in the number of employees engaged on a particular type of work, general overhead expenses are reduced and the machine may very likely pay for itself within a short time.
3. The standardization of methods and processes, which neces-

sarily accompanies the use of a machine, makes it possible to employ less expensive labor.

4. Since most office appliances require an operator more or less specially trained for the work, the adoption of a machine brings about specialization, which, in turn, produces more work.

5. Owing to the fact that information of a statistical nature is more easily made available than when hand methods are in use, it is possible to secure a greater amount of periodical information of a statistical nature because of the ease of collecting it.

Procedure in selecting the proper equipment. When considering the purchase of any automatic office appliance, the office manager should constantly bear in mind the fact that production capacity, operating speed, operating upkeep costs, and the length of life of a machine can be measured with considerable accuracy. Consequently, there is no reasonable excuse for an office manager's buying a machine merely because others have told him that they have found it effective in their work, or because many of his friends have such machines in their offices. Such recommendations are helpful and useful, of course, but their importance should not be overestimated. Moreover, it is important to bear in mind that the popularity of a particular make or type of machine does not necessarily mean that it is the one best suited for a given situation.

The limitations of an office machine should be investigated as well as its advantages, which are generally more thoroughly exploited. In this connection, it is highly desirable that the office manager determine for himself, by means of a personal investigation, just what the experience of others has been with the device in question. A man does not buy an automobile solely on the word of the sales representative. Why should he be less careful in purchasing an office machine, especially in view of the fact that it may cost as much as or even more than the car?

Because the accomplishments of automatic office equipment can easily be ascertained, it is only common sense that the office manager have the actual performance of any machine he is considering demonstrated on his own work. All office-appliance companies are more than glad to have an opportunity to demonstrate the features of their particular product without charge to the prospect. Indeed, in many cases, a liberal free trial period under actual working conditions is offered. Consequently, under no circumstances should a machine be permanently installed until after it has proved itself to the satisfaction of everyone concerned.

Another point, which it is important to bear in mind in connection with the purchase of an office machine, is that it may be necessary to make changes in the system of record keeping in use before the machine can be used effectively, if at all. Obviously, for example, a firm cannot change from hand posting of accounts to a system of machine posting without making certain changes in the size and form of the ledger sheets used. Changes in book-keeping methods also may be found necessary. While no one would argue that all systems of record keeping are perfect just as they stand, it is obviously important to consider this matter carefully before making a purchase that will necessitate important changes in present procedures.

Two specific cases. While the selling price of an appliance is, of course, an important factor to be considered, it is not necessarily the most important one. Two cases, which came to the writer's attention, illustrate what is meant.

In one instance the nature of the clerical work performed in the main office of a large construction company necessitated constant calculations involving multiplication and division. Various calculating machines were investigated, and finally one costing several hundred dollars was purchased and installed in the office. The work was handled at a somewhat greater speed than when it was performed by hand; but, because only one employee could work at the machine at a time, the office manager still felt that increased facilities were necessary. He hesitated to recommend the purchase of a second calculating machine, because of its relatively high cost.

One evening he casually mentioned his problem to a friend—an engineer. "Why don't you provide each employee with a slide rule?" said his friend. "They are not expensive, they can't get out of order, and anyone can learn to use one in a very short time." The office manager agreed that that was an excellent suggestion. The next day he investigated the feasibility of furnishing each employee in the particular group with a slide rule, and a few days later he put through the order. Fortunately, he was able to transfer his high-priced calculating machine to the statistical department, so that the company did not suffer any great loss by his ill-advised initial purchase.

On the other hand, the case of a well-known manufacturing concern illustrates the poor judgment often displayed in refusing to consider the purchase of a machine simply because the price is relatively high. In this company the products are so varied in

number, and, in many cases, are assembled from so many separate parts, that it is necessary to keep several thousand stock-record cards. Because of the nature of the business, it is also essential that these cards not only be kept accurately, but that they be kept posted up to date at all times. Four clerks, at an average salary of \$35 a week apiece, were spending their entire time in posting the stock records by hand. In addition, a fifth employee spent part of his time supervising the work.

Various business acquaintances had urged the department head who was in general charge of this work to buy, or at least to try, a certain make of mechanical device. The price of this machine was \$1,000. The department head persistently refused even to consider the device, saying that because a request for two typewriters costing but a fraction of the price of the stock-card posting appliance had recently been questioned, he was sure that he could not get permission to spend \$1,000 for one new machine, no matter how good it might be.

"Let's look at it another way," said one of these friends one day. "We know, from the records of performance of this machine under similar conditions in other firms, that with it one person can do the work which it now requires four clerks to handle. To be conservative, assume that it will be necessary to pay this one person \$40 per week instead of \$35. This means that in direct salary costs alone you can save, week in and week out, practically the entire salary of three employees—\$100 per week, to be exact. Even making a liberal allowance for depreciation, repairs, and general carrying charges, including, if you wish, interest at 6 per cent per year on the \$1,000, the machine will more than pay for itself inside of four months."

Needless to say, not only was the department head convinced, but he had no trouble in making his superior see the ultimate economy of installing the machine.

Equipment as an investment. These illustrations clearly emphasize the fact that money spent on the purchase of mechanical office devices should be regarded as an investment rather than as a non-productive expense. In the commonly accepted interpretation of the word, an investment yields a continually profitable return. In the case of the calculating machine cited above, the return on the investment was entirely too small to warrant its purchase. In the other instance, the department head took an entirely wrong attitude toward the \$1,000. As soon as the in-

vestment aspect of the matter, rather than the immediate cost, was presented to him, he saw the whole situation in a different light.

**Securing maximum usage.** There is still another aspect of the matter of installing mechanical office devices which should receive more attention in practice than it sometimes does. Often one will find that a mechanical device was purchased at a time when all signs pointed to its necessity and usefulness. Within a few months, however, the machine may be found to be standing in the corner accumulating dust from lack of use. Those who were originally expected to operate the machine are not using it, but have reverted to the methods previously used, often because they feel that the new machine is more bother than it is worth.

Before purchasing any mechanical office device, the office manager should be very sure not only that a definite need exists for the machine, but also that those who are to use it are fully sold on its purchase. In one well-known company, for example, most suggestions for the purchase of new devices come from the workers themselves. It is fully understood by everyone that, no matter how much time the machine may save or how many less employees may be needed on the particular operation, no one will lose his position on account of the use of the machine. Obviously all of the advantages accruing to the company which installs modern office machinery are lost, if, after the appliance is purchased, it is not used.

It is also of the utmost importance that those who are to operate the machine be thoroughly instructed in the details of its operation and in regard to the variety of operations which it will perform. There is, for example, a make of calculating machine which adds and subtracts directly, and on which multiplication and division calculations may be easily performed. In many cases, however, 50 per cent or less of the maximum possible usage of the machine is secured, due to the fact that the operator has not been fully instructed in division and multiplication methods. Such a situation is the fault both of the manufacturer's representative and of the office manager. Obviously it is one against which both should do their utmost to guard.

**A machine utilization survey.** The following plan, advanced by E. H. Conarroe, of the Metropolitan Life Insurance Co., is comparatively simple to carry out and will yield all the information needed to enable a company to achieve maximum use of its equip-

ment. Although it was developed as a typewriter survey, it can be applied to any class of office machine.<sup>1</sup>

A fundamental principle of management is that action must be based on facts. Before an intelligent approach can be made to the problem of better typewriter utilization, it is necessary to establish certain basic facts. We must know, first, the number, type and location of typewriter equipment presently available for use, second, the extent to which the machines are being used (both in terms of the period of the day or week and the proportion of time in actual operation), by whom they are used and the nature of the work for which they are used.

It is unlikely that authoritative information along these lines is available in most companies. It can readily be developed, however, through a specially planned survey. A survey for this purpose need not be elaborate. It can be conducted with relatively little difficulty.

The first requirement is a complete inventory of available typewriter equipment. This is a simple matter and calls for no very special procedure. I think it is the practice in many companies to maintain a current record of office machines and equipment, including typewriters. Frequently this is set up on a card record form with a separate card for each machine. The record shows, in addition to the general description, model, size and identification number, the date and cost of acquisition, location and in some cases a record of repair and maintenance services. If a record of this kind does not exist it can be set up quite readily. It establishes your available supply.

The second step is to determine the extent and manner in which these machines are being used. For this purpose I suggest a simple time analysis form similar to that reproduced on the accompanying chart. (See Figure 12.) This, in addition to the machine identification number and location, provides for recording the actual starting and stopping time and the elapsed time, whenever the machine is used. The nature of the work performed and the name of the operator are also recorded. One of these forms would be kept for each individual typewriter. It need only be kept for a test period. The period should be sufficiently long to provide a fair sample of experience, however. In some instances, one or two weeks may suffice—in others a longer period may be necessary in order to cover a full cycle of work. On the illustrated form (Figure 12) I have shown a typical report for one day.

The information recorded on the individual time analysis forms can be summarized in various ways and will permit some very interesting and practical analyses to be made. Often it will bring some surprising and unsuspected conditions to light. Figure 13 illustrates one method of summarizing the information. This presents the picture rather graphically. This chart simply lists down the side the individual typewriters and shows horizontally the hours of the working day. By filling

<sup>1</sup> Conarroe, E. H., "A Survey of Typewriter Utilization," *NOMA Forum*, National Office Management Association, February, 1948, p. 11.

in the time during which the machine was in operation (on the order of a Gantt chart) a rather complete picture of the typewriter utilization situation is presented. The data recorded are purely hypothetical but they reflect a reasonable situation. With this picture before him the office executive is in a position to work out some very practical approaches to his typewriter utilization problem. It reveals, for instance—

## TYPEWRITER TIME ANALYSIS

Machine Number 1  
 Location Stenographic Dept.

DATE	TIME			NATURE OF WORK	OPERATOR
	Start	Stop	Elapsed Min		
10/5	9 00	9 45	45	Typing Manuscript	A
	10:00	10 15	15	Copying Letters	A
	11 15	12 00	45	Transcribing Dictation	A
	1 00	1 45	45	" "	A
	2 45	3 45	60	Typing Monthly Reports	A
	4 15	4 30	15	Copying Report	A

Fig. 12.

(a) The per cent of total available working time that each machine is actually operated. This shows the unused capacity and provides a basis for the reassignment of machines, if necessary.

(b) It brings to light regularly recurring intervals when certain machines are not in use, which might provide a basis for work scheduling and doubling up on machine utilization.

(c) It shows graphically the idle facilities available for use through the staggering of lunch periods and starting times for individual operators. This is quite conspicuous on the chart. Note that under the plan of uniform lunch periods in effect all of the typewriters are idle from 12 to 1 every day. If the work were rearranged so that the 12 individually assigned machines were used during this period alone it would be equivalent to adding one and a half typewriters. Notice also the eases of machines 13, 14, 15 and 16. These are all what I would call "convenience" machines. None is used as much as one-third of the time. It would seem that one or two general machines conveniently located might be substituted for these.

These observations are cited merely as illustrative of the manner in which this survey material can be applied to the solution of the typewriter utilization problem. They do not exhaust the possibilities by any means. A refinement of the analysis shown might be to provide a series of lines on the chart, one under the other, for each day of the week, in order to show variations or consistency in the time of machine idleness. Also, different colored lines might be employed to indicate

different types of work, such as transcription from notes, statistical reports, typing from manuscripts, order writing, etc.

Another form of analysis that is possible from a survey of this sort is an analysis of the types of work for which typewriters are used.

### ANALYSIS OF TYPEWRITER UTILIZATION

MACR NO	ASSIGNED TO	9-10	10-11	11-12	12-1	1-2	2-3	3-4	4-5	TOTAL MINUTES IN USE	% OF TOTAL TIME IN USE
1	A	-	-	-	-	-	-	-	-	215	45
2	B	-	-	-	-	-	-	-	-	150	27
3	C	-	-	-	-	-	-	-	-	205	43
4	D	-	-	-	-	-	-	-	-	210	44
5	E	-	-	-	-	-	-	-	-	225	47
6	F	-	-	-	-	-	-	-	-	265	55
7	G	-	-	-	-	-	-	-	-	195	41
8	H	-	-	-	-	-	-	-	-	165	35
9	I	-	-	-	-	-	-	-	-	265	55
10	J	-	-	-	-	-	-	-	-	215	45
11	K	-	-	-	-	-	-	-	-	300	63
12	L	-	-	-	-	-	-	-	-	265	55
13	CARD RECORDS	-	-	-	-	-	-	-	-	90	20
14	FILES	-	-	-	-	-	-	-	-	145	30
15	MAIL DESK	-	-	-	-	-	-	-	-	60	13
16	RESEARCH STAFF	-	-	-	-	-	-	-	-	140	30
17	GENERAL - LARGE CARRIAGE	-	-	-	-	-	-	-	-	60	13
18	GENERAL - POSTER TYPE	-	-	-	-	-	-	-	-	85	18

Fig. 13.

Provision for recording of such information is made on the individual typewriter analysis form. If desirable, however, this could be amplified somewhat. The third chart, Figure 14, shows a suggested form of report that will provide more detailed information and will permit a more detailed analysis from this standpoint. If carefully kept for a representative period this form will provide a record of all material prepared on a typewriter. The analysis of such a record might serve to locate typewriter uses which can be eliminated either through discontinuance of the material typed or through the substitution of some alternative method.

Fig. 14.

Standardization of equipment. The two principal practical advantages gained by a company that standardizes on a particular

make and kind of equipment are greater efficiency of operation and economy of purchase. If, for example, all the typewriters and dictating equipment in the office are identical, it is obvious that no time is lost by employees in learning how to operate the equipment when they are transferred from one department to another. Furthermore, by concentrating purchases on one make of equipment, companies often can secure equipment at lower unit prices by taking advantage of quantity discounts or long-term purchase contracts. Standardization also may result in a net saving in the amount of equipment needed, because all units are interchangeable. In addition, maintenance and repair costs are likely to be reduced.

correlation of use of general forms; to keep informed currently concerning departmental and commercial use of developments of office equipment and supplies."

Standards established by the committee are published in a catalog of Office Equipment Standards and circulated to all departments and associated and subsidiary companies. The committee also furnishes information concerning non-standard items recommended for use at particular locations or under special conditions.

It has been found expedient to organize three subcommittees composed of departmental staff members to deal specifically with studies of furniture, appliances, and supplies. These subcommittees have made studies of furniture, appliances, and supplies which have greatly increased our knowledge and ability to make more effective use of commercial items. They have also set up complete standards on furniture, such as desks and chairs; appliances, such as typewriters; adding and accounting machines; and supplies covering the entire field of materials used in the office.

The subcommittees carry on practical tests and laboratory experiments. They meet at frequent intervals to formulate definite recommendations to the Main Committee and to report on the status of uncompleted assignments. These recommendations and reports are in the form of minutes of meetings which are considered by the Main Committee at each meeting, usually held monthly. If recommendations are acceptable to the Main Committee, standards are established and made effective through publication in the catalog. Otherwise, recommendations are returned to the respective subcommittee for further action or consideration. Uncompleted items are considered, and comments, requests for special attention, and the like are given to the subcommittees.

As a part of its catalog, the committee issues a "Reproduction Process Manual," dealing with various methods of reproducing office matter and the conditions under which they are applicable economically. The committee also sponsors the preparation and publication of a manual dealing with correspondence standards and related mailing practices.

Care and maintenance of office equipment. The average office has a sizable investment in furniture and machinery which must be safeguarded. If it is neglected, depreciation is rapid, the value of the investment shrinks, breakdowns occur, production is interrupted, and office expense increases. The increased mechanization of the office has made the maintenance function increasingly important. The failure of an important machine may result in holding up the work of an entire unit and, quite possibly, the work of the manufacturing plant. Office maintenance that anticipates trouble and prevents such interruptions plays an important part in reducing office costs.

erally speaking, it is economical to adopt this plan only when an estimate of the cost of maintenance paid to outside firms exceeds the salary of a first-class mechanic, plus other expenses such as rent, light, and depreciation on the machinery in his shop. However, other advantages are present which are not susceptible to measurement on a dollars-and-cents basis:

- a. Immediate service is available.
- b. Equipment receives attention before breakdowns occur.
- c. The mechanic, rather than an outside vendor, recommends trading-in of equipment.
- d. Assignment of equipment on the basis of condition and the necessities of each job is controlled much more readily.
- e. All the equipment receives regular inspection and service, rather than just those items which can be covered by service contracts.

2. Maintenance contracts. Under this plan, the company signs maintenance agreements with either the vendors of the equipment or service firms. Rates are based upon the number of units under contract, the frequency of the inspection trips, and the nature of the equipment serviced. One very important advantage of this plan is the regularity with which inspection and cleaning occurs. This is governed by the vendor, who must furnish the service in order to collect the fee. Another advantage lies in the fact that maintenance expense is predetermined by contract and the responsibility for the work is shifted outside the organization.

3. Non-contract service. Since new machines usually are covered by a guarantee which includes both inspection and repair service during a specified period, the proportion of such equipment to the total equipment may indicate that neither maintenance contracts nor company-operated service is necessary. In such cases, vendors are requested to furnish repair service only when required. Such an arrangement is the least desirable of the three, for it has the following disadvantages:

- a. Service calls on this basis cost more per call than under the contract arrangement.
- b. Mechanical equipment usually does not receive the same careful attention under this service as it does under either of the two services mentioned previously. The useful life of the equipment is shortened.
- c. Service is not always available immediately; thus, time is lost unless stand-by equipment is available.

When planning for the maintenance of office equipment, the inclusion of office furniture must not be overlooked. Periodic inspection and cleaning are just as important to desks, chairs, and filing equipment as they are to office machines. If company-operated service is in use, this equipment can be scheduled for attention as readily as can machines. Contract service is also available and, for a fixed fee, a contractor will wash, polish, and make furniture repairs. File cabinets will be cleaned, the suspension slides repaired and oiled, and all drawers put in good working order. Such work need not be done as frequently as machine service—once a year is generally sufficient. However, too often it is ignored entirely and the full useful life of desks, chairs, and files is not achieved.

**Types of equipment.** We turn now to a more specific and detailed discussion of the important types of equipment and machinery found in representative business offices. Several points should be borne in mind in connection with this discussion. First, it is confined to statements regarding the types of machines, what they will do, and how they will do it. Second, for obvious reasons, manufacturers' names have been omitted in the text. Third, no attempt has been made to describe the mechanical operation and parts of any machine. Fourth, only information pertaining to equipment and appliances which are generally in common use in offices is given. Thus certain devices with which some readers may be familiar may not be mentioned. In other words, the purpose of the remainder of this chapter is to present a survey of what the field offers, rather than to be an encyclopedia of office appliances.

**Desks.** There are a number of standard types of desks commonly used in offices today. The clerical desk, as distinguished from the stenographic desk, is designed for employees whose jobs consist of writing, checking, and manual computations. Single-pedestal and double-pedestal models are available and the selection should be made on the basis of writing area required and the drawer space necessary for records, reference material and personal possessions of the employee.

dicate that excessive vibration causes typewriters to wear rapidly, resulting in uneven alignment of the typewritten material and causing piled letters. For this reason, a fixed-platform desk should be selected whenever work conditions warrant it, since it permits a minimum of vibration and noise. The drop-center desk ranks next in stability, with the secretarial model last. The decision between the two should be based upon the relative use of the typewriter, for the writing surface of the secretarial model is always free for papers and the change from clerical to typing work can be performed without moving the typewriter platform.

The executive desk is generally a double-pedestal desk, 60 or 66 inches by 36 inches. Combined with a table of matching size and design, it permits the executive to use either piece as a writing surface and to spread the necessary papers and reports on the other so as to have them readily accessible.

*Functionalized desk.* It will be noted that the foregoing discussion concerns itself with describing standard equipment available. It is the writer's opinion that none of the standard equipment mentioned is necessarily the correct solution to the problem of selecting the proper desk. The same thoughtful consideration should be given to selecting this equipment as is given to selecting a billing machine or a calculator. The work of the employee should be analyzed and the duties of the job, the operations to be performed, the equipment (pencils, pens, reference books, charts, and so forth) used, and any other pertinent factors should be noted. The arrangement of the materials should be planned and the proper desk selected to provide the most compact, best-organized work bench for the employee. It is the writer's belief that too much emphasis is laid upon the standardization of design, size, and color. Such standardization contributes nothing to providing each employee with the tools best designed to permit him to perform his work in the most efficient manner.

There have been several studies made in an attempt to produce desks that can be adapted to the requirements of an individual job in the office. Two of the best-known of these research projects were the Studebaker desk, so called because W. E. Tarr and C. I. Center, of the Studebaker Corporation, developed it for use in that company's offices, and A. H. Stricker's keypunch desk, which was developed at General Electric's Nela Park offices.<sup>3</sup> The Stude-

<sup>3</sup> See Stricker, A. H., *Seven Steps Toward Simplified Office Procedures*, McGraw-Hill Book Co., New York, 1943.

baker desk is an attempt to use interchangeable bases, tops, and desk drawer and typewriter units. After analyzing the requirements of the job, a desk is assembled for it, thus insuring that each employee is furnished with only those features which are needed. The size is controlled so that a minimum of floor space consistent with efficient operation is used. A. H. Stricker and his staff made detailed studies of the keypunch operation. With the facts thus obtained, a functional desk was designed, improved, and redesigned until the desired result was obtained. It is interesting to note that the object of these studies was to improve production, reduce errors, simplify the work habits of the operator, and increase the employee's comfort. The first experiments alone increased production by 12 per cent and reduced errors by approximately 18 per cent. These attempts at functionalizing office furniture, as well as others such as that of the New England Mutual Life Insurance Company,<sup>4</sup> indicate a healthy trend on the part of alert office executives. The time is not far distant when equipment will be planned for production in the office, as it now is in the factory.

Executive, clerical, and stenographic chairs. Four main types of chairs are in office use. The (1) straight-back chair and the (2) adjustable swivel chair with arms are the ones commonly used by executives. The (3) same general type as mentioned above, but without arms, is manufactured in a variety of forms. This type of chair is used principally for stenographic purposes. The (4) non-swivel type of armchair is usually placed for the visitor beside an executive's desk.

Authorities agree that there is a definite relationship between correct posture and seating facilities and the quality and quantity of work. As a result, attention to the type of chair best suited to each kind of work has increased considerably in recent years. Posture chairs especially designed for office workers are available and are used in a considerable number of offices. These chairs are designed for executives, clerical workers, and typists and operate on the principle of adjusting the chair to the individual user. Therefore, it is important that the initial adjustment of the chair be made carefully and properly and that prior to assigning the chair to another employee it be completely readjusted and fitted to the new user. Failure to do this results in the loss of any benefit from the posture chair. The use of poorly adjusted chairs may

prove more detrimental than the use of standard, non-posture models.

**Files.** Filing cabinets of all types may be secured in either wood or steel. The four-drawer vertical filing cabinet, of either kind of material, made to hold 8½ by 11 inch papers, is the standard and usual piece of filing equipment. Practically all equipment manufacturers, however, produce as standard models vertical files designed to hold papers or cards of sizes other than 8½ by 11 inches, ranging all the way from 3 by 5 to 11 by 17 inches. Where the nature of the business is such that customers frequently call at the office, counter-height files are often used to advantage. Such files, in reality, are three-drawer rather than four-drawer, thus making the total height convenient for counter purposes. Not only does the use of such files save space, but it is often possible to file right at the counter papers or other records needed for use in talking with the customer or caller, thus saving the time which it would be necessary to take to go to some other part of the office to secure the paper, to return to the counter, and, after finishing the business at hand, to return the paper to the file.

**Visible record-keeping equipment.** Visible record-keeping equipment is extensively used in offices. The fundamental principle upon which all such equipment works is the fact that, in one way or another, the name, title, or subject is made quickly visible. Visible equipment is of three general types: (1) the unit or panel type, in which the card or metal rack itself is removable; (2) the type which consists of a series of panels built horizontally into the outer unit so that, by pulling the panel out, the principal name or title is quickly found (the holder in which the card is kept may then be raised, so that the entire card is visible); and (3) the revolving-rack type, similar to the first one mentioned, but used chiefly in cases where it is necessary for a considerable number of persons to use the rack at the same time. Credit cards used in retail stores, showing the names of customers who have a charge account, and the credit limit of each, are often placed on revolving racks of this kind. Each rack contains cards covering a section of the alphabet. In cases where the customer is waiting to take a package with him, the sales check is sent by tube to the credit clerk, who can quickly check the credit by turning to the rack, authorize the charge, and return the sales check to the sales clerk.

**Limitations of visible equipment.** Visible filing equipment has certain principal limitations. (1) In some cases visible filing equip-

ment is used for cards containing information that it is not necessary to refer to constantly or quickly. This type of equipment is somewhat more expensive than vertical filing units. Hence, when one considers the number of cards that one unit will hold, it is apparent that unnecessarily high costs may be incurred by using visible equipment when non-visible equipment would serve the purpose equally well. (2) In an office where record-keeping equipment needs are growing rather rapidly, the installation of visible equipment may result in a rise in equipment costs which will become increasingly disproportionate in relation to the filing space that is appropriated as more units are added. (3) Ordinary vertical file cabinets are often used for the storage of miscellaneous booklets, leaflets, reports, and so on, as well as for filing papers and letters in the regular way. Obviously, visible equipment is not adaptable to storage filing of this character.

Steel versus wooden equipment. Since the introduction of steel filing cabinets, there has been a considerable increase in the amount of steel office equipment used. Steel files are now used almost exclusively in preference to wood. It is possible to equip an office entirely with steel equipment including desks, tables, filing cabinets, partitions, bookcases, and chairs, the latter available in both steel and aluminum. Many companies that formerly produced only wooden equipment have added steel to their line, while a number of other companies produce steel equipment exclusively.

Among the advantages that steel equipment offers, under practical working conditions, are the following:

1. Steel resists fire much more readily than wood. It will not burn, nor will it fall apart if dropped from one floor to another.
2. Steel equipment costs about the same as wood, but lasts indefinitely, thus reducing the amount of depreciation which it is necessary to charge off each year.
3. Because steel parts wear out more slowly than wood, and, in general, stand the wear and tear better, the mechanism of a steel cabinet is less likely to get out of order.
4. In a good many cases which have come under observation, the bottom drawer of the filing cabinet is often used by the file clerk as a step to enable her to reach something on the top and at the back of the cabinet. Steel stands this practical kind of wear and tear better than wood.

Wooden files have one important advantage over steel files. In a burning building, the wooden exterior of the file cabinet may burn

somewhat, but the papers inside will not be charred so quickly as they are likely to be in steel cabinets. This is due to the fact that wood burns slowly and does not transmit heat, while steel, although it does not burn, is a conductor of heat, with the result that, under similar circumstances, papers may be charred more quickly in a steel cabinet than in a wooden one.

Adding and calculating machines. This group includes those machines whose sole work consists of calculating of one kind or another. The operations possible are addition, subtraction, multiplication, and division. Some types of machines are capable of performing all four operations; others, only one or two of them. Listing machines furnish a printed record of the calculation; non-listing machines do not. Some operate mechanically when the keys are depressed; others are equipped with hand levers which register each item in the computation; still others are electrically operated and will perform an entire multiplication or division once the necessary factors have been set up. There are at least twenty different manufacturers of adding and calculating machines, many of them offering several basic types with various models in each.

Billing and bookkeeping machines. Billing and bookkeeping machines are not unlike, in that they are really a combination of a typewriter and a calculating machine. In fact, a number of machines which are sold for billing work and also as bookkeeping machines can be used, with slight changes, for both billing and bookkeeping work. The main purpose of the billing operation is to produce an invoice and simultaneously make additional copies for other purposes, such as the packing slip, the shipping copy, the manufacturing department copy, the express receipt, and so on. The fundamental principle of bookkeeping machine operation is also the writing of a number of records or forms at once, thus eliminating the copying necessary with hand work and also insuring accuracy of posting through mechanical calculation and devices that lock the machine when an error has been made. In these cases, such copies as the accounts receivable ledger, customer's statement, and a proof journal would be obtainable. Basically, both machines are a combination of a typewriter and a calculating machine, although there are some billing machines which merely type, others which type, add, and subtract, and still others which type, add, subtract, and divide. In the case of both billing and bookkeeping machines, the selection of the proper model will de-

83 cents. Other machines are available which will separate mixed change, which will count coins and wrap them the proper number to each denomination, and which will separate, count, and wrap, all in one operation.

**Check-handling machines.** There are a number of machines available for the production and processing of checks. Checks may be written by typewriter; they may be produced on certain billing and bookkeeping machines, when these machines are applied to accounts payable work; or certain portions of the check may be handled by means of addressing equipment. In addition to this, certain features such as the writing and protection of the amount of the check can be handled on machines specifically designed for this purpose. These machines imprint and perforate the amount upon the check, thus protecting the check against subsequent change in amount. These same machines will also affix signatures to the checks, protecting these signatures in the same manner. In some instances where the routines make it necessary, these signatures may be added as an operation separate from the writing of the amount. Some of the above equipment will not only write the check as indicated, but also produce a check register at the same time.

In certain offices the volume of checks arriving from customers is so great that the normal handwritten or rubber stamp endorsement proves to be a burdensome process. In such cases, the use of a check-endorsing machine is helpful. These machines automatically imprint the proper endorsement on the reverse side of the check and protect these endorsements simultaneously.

**Dictating and recording machines.** There have been a large number of improvements in the field of dictating and recording equipment within the last ten years. The standard dictating machine with the wax cylinder has been improved and, in addition, new types of equipment have become available. The wax cylinder system consists of three separate machines: the dictating machine, the transcribing machine, and the shaver (which is necessary to clean the surface of the record). The success of this type of dictating equipment has led to the development of a number of other types, the most important of which are the machines that utilize the principle of electronic recording on wire and those which record on flat disks rather than on cylinders. A number of models of the former type have appeared lately and include the benefits of clearer reproduction and the elimination of the shaving operation.

There are 9 basic reproduction problems common to offices:

- A—Reproduction of the Primary Copy (without halftones).  
(Record forms, reports, charts, checks, letterheads, bulletinheads, advertising literature, envelopes, tags, and labels.)
- B—Reproduction of the Text or Message (without halftones).  
(Form letters, bulletins, letters, and memo's.)
- C—Reproduction of the Primary Copy and/or Text Requiring Half-tones.  
(Bulletins and advertising literature with halftone illustrations.)
- D—Fill in of variable data on sheets of the same kind of Primary Copies.  
(Fill in by longhand, writing machine or duplicating machine.)
- E—Fill in of variable data on different kinds or sizes of Primary Copies.  
(Fill in by longhand, writing machine or duplicating machine.)
- F—Transfer posting of an individual line from a master list to individual sheets.  
(Each line of a journal sheet is transferred to separate ledger sheets.)
- G—Insertion of repetitive data on separate individual sheets of Primary Copies.  
(Inserting or imprinting a name, address, number, date, size, etc. on individual sheets.)
- H—Inserting or imprinting facsimile signatures.
- I—Imprinting agent's name and address on Advertising Literature.  
(Imprint for sales office, branch, dealer, distributor, etc.)

There are 9 possible combinations of the above:

- J—Reproduction of "A" and "B" at the same time.
- K—Reproduction of "A" and fill in of "D" at the same time.  
(Requires preprinted hectograph master, die impressed stencil, or direct process offset plate.)
- L—Reproduction of "A" and the insertion of "G" at same operation.
- M—Reproduction of "A" or "C" and the imprinting of "I" at the same time.
- N—Reproduction of "A", fill in of "D" and insertion of "G" at the same time.
- O—Reproduction of "B" and the insertion of "G" at the same time.
- P—Reproduction of "B" and the imprinting of "H" at the same time.
- Q—Reproduction of "B", insertion of "G" and imprinting "H" at the same time.
- R—Fill in of "D" and imprinting "H" at the same time.

There are 10 basic reproduction processes:

1. Carbon Paper
2. Automatic Typewriter
3. Hectograph Duplicator
4. Stencil Duplicator

5. Relief Printing
6. Offset, Planography
7. Photography (Camera)
8. Contact Print
9. Impression Stamp
10. Addressing Machine

Note: Check protector, postage meter, tabulating machines, facsimile equipment—and other processes such as oil paper stencils, silk screen, engraving, embossing, stone lithography, pen ruling, and the various high-speed presses which are uncommon in an office—are disregarded here.

Each of the ten basic processes has several variations that multiply the possibilities for solving reproduction problems. In fact there are so many possibilities that anyone unfamiliar with all the ramifications of reproduction becomes confused; therefore, this analysis has been developed as a measuring stick to help solve reproduction problems the most practical way.

To control reproduction so that advantage can be taken of minimum costs, improved quality, standard sizes, increased production and to expedite service, all reproduction requests should clear through one central point, and be handled by individuals thoroughly familiar with all the possibilities, characteristics, limitations and comparative quantity production costs of all processes available within the organization.

In most cases a problem can be solved by two or more processes, and usually the deciding factors are: (1) quantity required; (2) quality of copy required; (3) master available; (4) design of the copy; (5) layout cost for preparing master, stencil plate or typesetting; (6) combination runs (two or more up or front and back on the same plate); (7) equipment limitations such as (a) thickness of paper or card stock, (b) minimum and maximum sheet size, (c) maximum printing area, (d) style type, and (e) gripper or margins required; (8) time element or urgency for completing the job; (9) preservation of master, stencil plate or type for reruns; (10) over-all cost of the finished job (your cost compared to outside prices).

### How to use the Reproduction Guide:

1. Ascertain the code letter, that applies to the reproduction problem or job, from the top of the guide—either one of the Basic letters, A to I, or one of the Combinations, J to R.
2. Determine the quantity of copies required.
3. Refer to the proper code letter opposite arrow and also to the quantity of copies required. Then refer downward simultaneously in both code letter and quantity columns until you come to a horizontal bar in the quantity column which also has an X to its left in the code letter column. These points reveal the various processes applicable to the particular problem or job.

#### Example:

1. We wish to reproduce a text or message without halftones. This is Basic Reproduction Problem B.
2. We need 1000 copies.
3. Opposite arrow, we find code letter "B" and under "Practical Run—Quantity Copies" we find quantity "1M." Referring downward under both "B" and "1M," the first method we come to is Stencil Duplicating with stencil prepared individually, while six other methods are also indicated.

Note: "O" in chart indicates that a process can be applied but should be used only in exceptional cases.

### DESCRIPTION OF THE 10 REPRODUCTION PROCESSES

1. *Carbon paper.* There are two basic types of carbon paper, one made for writing longhand with pencil, the other for use with typewriter or other writing machines. (Hectograph carbon paper is covered in Section 3.) Both types are available in sheets or rolls, four weights of tissues, with three carbon finishes, and in five colors. It can be had with carbon coated on one side or both.

Spot carbon or strip carbon placed at any location on the back of a form or on a separate carbon sheet permits reproduction of the copy at that location and deletes the copy on the balance of the form. Inexpensive carbon paper, known as "onetime carbon paper" is commonly used in unit blocked, snap out, and continuous forms in sets.

Factors to consider when making a quantity of legible machine copies are: the weight of the carbon tissue, the intensity of the carbon, the weight of the paper stock, the kind of machine, the degree of hardness of the platen, and the touch of the operator.

2. *Automatic typewriter.* An automatic typewriter reproduces individually typewritten form letters or letters made up of form paragraphs, mechanically from a pneumatically operated perforated record roll. The operator manually types the individual name, address, and salutation and the body of the letter is typed mechanically, stopping at predetermined points for insertion of fill-ins, such as names, balances,

# REPRODUCTION GUIDE

REPRODUCTION IS THE DUPLICATION OF ONE OR MORE COPIES OF AN ORIGINAL

## BASIC REPRODUCTION PROBLEMS

- A - REPRODUCTION OF THE PRIMARY COPY (WITHOUT HALFTONES) - Record forms, reports, charts, letterheads, bulletin heads, advertising literature, etc.
- B - REPRODUCTION OF THE TEXT OR MESSAGE (WITHOUT HALFTONES) - Form letters, bulletins, letters, memos, etc.
- C - PRODUCTION OF THE PRIMARY COPY AND/OR TEXT REQUIREMENT - Bulletins and advertising literature with halftone illustrations.
- D - FILL IN OF VARIABLE DATA ON SHEETS OF THE SAME KIND OF PRIMARY COPIES - Fill in by longhand, writing, duplicating or addressing machine.
- E - FILL IN OF VARIABLE DATA ON DIFFERENT KINDS OR SIZES OF PRIMARY COPIES - Fill in by longhand, writing, duplicating or duplicating machine.
- F - TRANSFER POSITION OF AN INDIVIDUAL LINE FROM A MASTER LIST TO INDIVIDUAL SHEETS - Each line of a journal sheet is transferred to separate sheets.
- G - INSERTION OF REPLICATED DATA ON SEPARATE INDIVIDUAL SHEETS OF PRIMARY COPIES - Reprinting a name, number, size, etc., on individual sheets.
- H - INSERTING OR Duplicating SIGNATURES.
- I - INTRUPTING AGENT'S NAME AND ADDRESS ON ADVERTISING LITERATURE - Imprint for sales office, branch, dealer, distributor, etc.
- J - REPRODUCTION OF "A" AND "B" AT THE SAME TIME.
- K - REPRODUCTION OF "A" AND FILL IN OF "D" AT THE SAME TIME - Requires preprinted halograph master, die impressed stencil, or direct offset plate.
- L - REPRODUCTION OF "A" AND THE INSERTION OF "G" AT THE SAME TIME.
- M - REPRODUCTION OF "A" OR "C" AND THE IMPRINTING OF "I" AT THE SAME TIME.
- N - REPRODUCTION OF "A" FILL IN OF "D", AND IMPRINTING OF "I" AT THE SAME TIME.
- O - REPRODUCTION OF "B" AND THE INSERTION OF "G" AT THE SAME TIME.
- P - REPRODUCTION OF "B" AND IMPRINTING OF "H" AT THE SAME TIME.
- Q - REPRODUCTION OF "B", IMPRINTING OF "G", AND IMPRINTING "H" AT THE SAME TIME.
- R - FILL IN OF "D" AND IMPRINTING "H" AT THE SAME TIME.

## COMBINATIONS OF THE ABOVE

J - REPRODUCTION OF "A" AND "B" AT THE SAME TIME.  
K - REPRODUCTION OF "A" AND THE INSERTION OF "G" AT THE SAME TIME.

X - INDICATES THE MOST PRACTICAL PROCESSES APPLICABLE TO THE SPECIFIC PROBLEM  
O - INDICATES POSSIBLE PROCESS APPLICATION USED ONLY IN REMOTE CASES

Fig. 15 (Cont.).

as the original report or used a second time to make a maximum of two legible transfer postings of each line.

4. Stencil duplicating. Stencils are made of a tough fibrous tissue having a texture impervious to ink. The image to be reproduced is cut into the stencil by typewriter or stylus. The cut stencil is placed around the drum of the machine and the pressure on contact with the paper forces the ink from the drum inkpad through the cut stencil to reproduce the image. Stencils for line work, drawing or hand-lettering are prepared on a drawing scope, and a stylus is used for cutting the image into the stencil. Several types of styli are available for different breadth of lines or for dash or dotted lines. Metal and plastic screened plates are used for shading. Lettering guides are used for hand-lettering. A transparent cellulose ribbon, wound on a typewriter ribbon spool, is often used as it eliminates cutting out of interiors of letters and helps keep the type clean.

Photographic or die-impressed inserts of illustrations and cartoons can be stripped in with the regular typewritten copy. The die-impressed copy can be a form, letterhead, or bulletinhead and the text is inserted by longhand or typewriter so that the form and the fill-in or text can be reproduced simultaneously. Water soluble ink produces quality work on regular sulphite stock, eliminating the necessity for special porous stock. Offset on the back of the copy can be eliminated by using an inter-layer for slip sheeting.

Some of the outstanding advantages of this process are that copies are made direct from the stencil; any portion of the image can be deleted by masking out; two or more colors can be reproduced at the same time by separating colors on the ink pad; illustration inserts can be stripped in with typed copy; fill-in can be made on die-impressed stencils and both reproduced at the same time; and stencils can be cleaned and preserved for reruns.

5. Relief duplicating and printing. Relief printing is the means for reproducing copies from type or plates on which the image is raised. There are six types of machines designed for this purpose:

(a) Rotary duplicator. Hand set type, line slugs, embossed metal strips, rubber plates or curved electrotype plates are mounted on a drum segment and reproduction can be made by using either printing ink or inked ribbon.

The rotary duplicator can be used for other miscellaneous operations, such as imprinting, perforating, scoring, signature imprint, and consecutive numbering. Some of these operations can be performed at the same time the copy is being reproduced, while others require a separate run.

(b) Flat-bed duplicator. One or more embossed metal plates of five to seven lines per plate are assembled into a frame to compose the master record for imprinting. The frames holding the embossed plates are laid on the printing bed of the machine and the required number of imprints are reproduced through a ribbon. The application of this

the image is offset onto the paper. Reproduction can be made on all weights and types of paper and card stock. The master or plate can be prepared by typewriter, tracing through carbon, handwriting, shadow tracing, drawing, pressure transfer, painting, mechanical transfer, opaque stencil transfer, ruling, and photography.

Three different mediums can be used for preparing offset plates. Each has advantages particularly suited to certain classes of work. They are:

(a) Direct image. The image is applied directly to the smooth coated surface of a paper, plastic or metal plate. Only materials having an oil base and especially designed for applying images direct to the plate will reproduce. Some of the outstanding advantages of this process are that copies are made direct from the original writing, typing, painting or drawings, and that fill-in can be made on preprinted plates and both reproduced at the same time.

(b) Opaque stencil transfer. Opaque stencils are made of a tough fibrous paper which is photographically opaque. The image to be reproduced is cut into the stencil by a typewriter or stylus. The cut stencil becomes the medium for transferring the image onto the offset plate by passing bright arc light through the image apertures which affect the sensitized zinc or plastic offset plate.

An opaque stencil can be spliced to a photographic negative of a letter-head or bulletinhead so that both appear on the offset plate. This permits running the complete job in one operation. Photographic negatives of line illustrations or halftones of pictures may be stripped into a typewritten stencil. Some of the advantages of this process are that clear-cut copy can be reproduced from typewriter type or drawings; typewritten text can be spliced to photographic negative and both reproduced at the same time; and halftone negative or line illustrations can be stripped to a typewritten stencil and both reproduced simultaneously.

(c) Photography transfer. Any image that can be photographed (line work or halftone) will reproduce by this method. The photographic negative becomes the medium for transferring the image onto the offset plate by passing bright arc light through the transparent image which affects the sensitized offset plate.

Means for preparing the master are unlimited. It can be an existing copy or it may be originated to requirements. The existing copy, such as letters, books, advertisements, photographs, drawings, maps, forms, magazine or newspaper articles, can be reproduced by photographing the original, either in the same size or enlarged or reduced. Line drawings and record forms, prepared on a good quality white drawing stock by means of a ruling pen and india ink will photograph well. Typewritten composition can be typed directly on the master or can be cut and pasted in place. Some of the advantages of this process are that any copy that can be photographed can be reproduced in the same size or enlarged or reduced; only one master is required for printing two or more up on a plate; halftones can be reproduced; shading effects and block outs can be used effectively; longhand writing can be reproduced; the plate can be

be backed up with carbon paper in reverse on the under side to improve opacity.

In general, there are two types of contact prints: wet process and dry process.

(a) Wet process. After exposure, the copy must be developed, washed, and dried. A negative print is reproduced from a positive original or a positive print is reproduced from a negative original.

(1) Blueprint. Blueprint equipment is available to make copies on continuous rolls or on cut sheets. Continuous roll equipment completes the entire process automatically. It exposes to the arc light, develops with potash, washes with water, and dries the print. These operations are handled individually when cut sheets are used.

(2) Van Dyke print. The equipment and process is much the same except that the Van Dyke paper is developed with hypo and the results are dark brown and white rather than blue and white.

(3) Contact printer. This process is similar to the blueprint and Van Dyke processes except that cut sheets are exposed to light in an inexpensive box printer and the special sensitized paper is developed and fixed. The results are black and white. Copies can readily be made from existing materials, such as letters, graphs, charts, and advertising, or from transparent originals.

(b) Dry process. Positive prints are reproduced directly from transparent originals by dry developing processes. The sensitized paper and the transparent original are exposed in the printer, then the exposed paper is fed through the developing machine, and the finished print emerges fully developed for use without washing or drying.

Since the backgrounds of these prints are white, added written notations or revisions are legible, and prints can be colored with crayon, ink, or water colors. Black and white prints are available with a jet black, red, or brown line on a white background. The prints are developed by the application of moisture to the surface of the sensitized paper. The so-called white print (ozalid) process produces blue, black, or maroon lines on a white background. In this case, the prints are developed by ammonia fumes. This dry process reproduces true to the scale of the original and prints do not wrinkle or curl.

9. *Impression stamps.* Impression stamps are ideal for inserting repetitive data on record forms and there are many variations designed to meet specific problems.

(a) Rubber stamps. These are made in such stock designs as "PAID," "BILLED," etc., and other rubber stamps can be made to order in any size or style to meet specific problems. There are other models which use interchangeable type which is either set in grooves or the characters appear on an endless rubber belt.

Ink for such stamps can be obtained in a number of colors, including purple hectograph, which is used for reproducing the impression by the gelatin hectograph process.

(b) Signature stamps. Facsimile signature stamps can be conveniently used for approvals when longhand signature is not required. They are

legibility. The machine which was developed to type in variable type faces has gained wide acceptance because of its versatility. Both horizontal and vertical spacing of lines and letters may be varied to fit the work. This machine can be used for special reports, where condensation is important and where varied sizes of type will enhance the readability. It is also widely used as a composing machine, since it can be used to create photo-offset copy, cut stencils, and prepare direct process photo-offset masters.

**Other available office machines and appliances.** In the foregoing discussion, the principal kinds of office machines and appliances have been described briefly and non-technically, and some of their chief uses and applications have been indicated. Yet there are numerous additional machines and appliances used in business offices, of which no mention at all has been made. Among the more important of these are:

1. Autographic registers and manifolders.
2. Loose-leaf equipment.
3. Envelope moisteners
4. Folding machines.
5. Paper-cutting, punching, and perforating machines.
6. Telephone indexes.
7. Envelope openers.
8. Hand stamp affixers.
9. Sealing machines.
10. Combined sealing and stamping machines.
11. Metering-permit machines.
12. Non-metering-permit machines.
13. Postal scales.

Earlier in this chapter mention was made of the Office Machines Directory of the National Office Management Association. The following list of machines and trade names was taken from that directory.<sup>6</sup>

## *Organization and Work of the Filing Department*

Filing department a service unit. Mention has been made in a previous chapter of the fact that the office is a service department to the business departments, and that the office manager is primarily a service executive. The organization and work of the filing department illustrates this situation especially well. No matter what duty of the filing department one may be considering, an analysis of the work and the need for it will quickly show that the ultimate object is an arrangement whereby the needs of some one of the business departments may be better served. Service, therefore, is the cornerstone upon which all of the activities of the filing department are built.

Duties of filing department. Under an arrangement of centralized filing, one of the principal duties of the filing department is to act as the final coördinator of information secured through, and handled by, the other departments. Often, this is done by bringing together in one folder or binder all correspondence and papers relating to the company's transactions with a particular concern or to a particular subject. In its capacity of coördinator, the filing department may be called upon to perform functions usually assumed by the business library, the research department, or even the statistical department, in a larger company. In so doing, it gathers and stores material regarding matters outside the company's own business. An oil company, for example, has a direct interest in having constantly and readily available a large amount of information with reference to conditions in oil fields, statistics of consumption, development of new lands, and so on. At the same time it places in its file all correspondence and records relating to its own business. In this case the filing department is acting in the dual capacity of a library and a keeper of company records.

The preservation of all records sent to it, both active and inactive,

is also a duty of the filing department. Moreover, the record must be made readily available at all times. The most important function of the filing department is not filing—it is finding. Files are not wastebaskets, nor are they places to put papers with the thought of never seeing them again. The proper performance of the filing function assumes not only the existence of an effective method of control, but also the installation and use of types of filing systems suitable to the work. The advantage of centralizing the filing function and the various types of filing systems in use are discussed in subsequent sections.

Filing departments also render tickler or follow-up service to the various business departments. It often happens, for example, that an executive wants to have a certain letter drawn to his attention at a specified date in the future. It is the duty of the filing department to see that this letter comes to him at the proper time. The methods by which this may be accomplished also are considered below.

which are and should be kept in private or departmental offices rather than in a centralized filing department. On the other hand, it is also true that in many cases papers which a young or egotistical junior executive may like to regard as highly important and confidential are, as a matter of fact, simply part of the routine business of the company and, consequently, belong in the general files rather than in his private office files. It should never be forgotten that all papers handled by any company employee, whether he be the chief executive or the office boy, belong to the company and not to the individual.

Advantages of centralization. Centralization of the files in one department yields a number of outstanding advantages which no departmental arrangement can possibly bring about.

In the first place, centralization results in the concentration of trained employees. Instead of a miscellaneous group of stenographers, clerks, and junior executives doing the filing or going to the files occasionally for papers, only people with specialized training and experience do the filing. As a result the filing is better done.

Centralization of the files also results in a uniform system of indexing and filing. Uniform service for all departments in such matters as the attaching of previous correspondence to incoming mail, follow-up, and transfer are also secured under a centralized plan. Since correspondents, senior clerks, and executives may be transferred from one department to another, uniformity in service of this kind is extremely helpful.

Centralized filing relieves other employees of this work. Provided, of course, that papers can be quickly and readily obtained from the centralized files whenever they are wanted, employees welcome the shifting of this responsibility. The ability to place responsibility definitely at one source is one of the outstanding advantages of centralized filing.

Many instances might be given to prove that centralization is of distinct money value in the saving of equipment. Where each department maintains its own files, the natural tendency, and in fact the actual necessity, is to provide a liberal amount of filing space. A department, for example, may have sufficient material to fill six file drawers. Filing cabinets are, however, usually purchased in units of four drawers to the cabinet. Thus one must have, under a departmental plan, eight drawers available in order to obtain the use of six. Duplication of guide cards and folders is also a necessary part of a departmental arrangement. A reduc-

from the filing department to the business departments is set up, through either the establishment of an efficient messenger service or the installation of mechanical conveyors, such as tubes or overhead carriers, then papers can be obtained from the filing department without any appreciable loss of time. If, however, the company is not willing to spend the necessary money and effort to provide such a system, then centralization inevitably will lead to great inconvenience on the part of department heads.

A second claimed disadvantage of centralizing the filing function arises from the fact that the various business departments each have different needs. It is said, for example, that the credit department will want its correspondence kept alphabetically according to customers' names, whereas the sales department may wish to have a cross index of customers and prospects by salesmen or by territories. This objection may be largely overcome by the installation of a proper filing system. It is true that the needs of the various departments differ, but it is also true that competent and experienced people are readily available who can work out a system which will fit the needs of the various departments and yet permit centralization of the filing function.

**Centralization not practicable in all cases.** Despite the fact that certain claimed disadvantages of centralization can be overcome by the installation of an efficient messenger or conveyor service and by the use of a filing system which meets the specific needs of the company, there remain certain cases in which centralization is impracticable. In the first place, there are the correspondence and other papers of important executives. Much of this material is clearly confidential and should remain in departmental or executive files. Many of the records and reports of the financial and accounting departments are necessarily filed in these departments and should not go to a central filing department. Because of the nature of its work and contacts, it is unusual to find any of the correspondence and records of the purchasing department in the central files. Engineering data in most cases are kept within the department itself. The legal department offers another illustration.

The important point to be borne in mind is that centralization of the filing function is a desirable and practicable arrangement in most organizations and for the majority of the departments, but that there are certain departments in every company and some business organizations in which a decentralized or departmental plan is much the better working system. This is a practical point

that is sometimes overlooked by those who see in centralization a panacea for all filing problems.

Centralized control—a compromise. When physical centralization is impracticable, centralized control frequently can improve the quality of filing service in all the departments and safeguard the entire organization's interest in the departmental files. Ida Welch explains it as follows:<sup>1</sup>

In many offices, large and small, the records and papers supporting them are under the direction of the person responsible for getting out a unit of the work. He, in turn, is responsible to another who also has a set of files. The latter is responsible to his superior who keeps his files, and so on up the line to the president.

All these files are working files, arranged in the manner most convenient to the people using them and, of course, in accordance with their individual ideas on filing.

These little files are successful from the individual's standpoint. The only trouble is, they are not company-minded, and getting at the records stored in them depends on the good-will of the party in charge. If that individual leaves his present job, he takes along in his head the key to his system, and transfers his files to storage where they become a time consuming problem.

The fact remains that more companies are using such individual files than are maintaining central filing departments. Therefore it would seem these files are fundamentally all right. Going on this presumption, let us look at central control to reduce expense and streamline the files.

Instead of tearing down the files now existing and reworking them into some new structure, let's see what happens if we keep the files as they are, impose a super-structure over them which will coordinate the systems, christen each section with a formal name, and eliminate duplications. Or, to put it differently, create a filing language easy to learn and agreeable to all concerned and use that language to keep a written record of the location and types of files within the company.

Actual control of the files is accomplished by listing all files in central control. General files can be listed and the file arrangement shown. Specific files are liable to give more trouble and should be listed individually.

The control may be a card index, giving file name and location, or it may be a typewritten list. It should be in charge of a competent, experienced file supervisor whose business will be to sell central control, give filing advice, and supervise the care of transferred records to central files and to dead storage.

Centralizing the files physically is optional, but at any rate after all filing is being done in a uniform way, there is no longer any reason for the individual to keep other than current matters.

<sup>1</sup> Welch, I., "Central Control to Cure Filing Troubles," *American Business*, August 1945, p. 30.

Under such a plan, departmental file clerks are responsible to the file supervisor for the maintenance of filing standards. When one division has a heavy load or gets behind, the supervisor borrows a girl from a section where the work is lighter at the moment. Thus, the work keeps flowing and no department has the extra filing help which otherwise would almost surely be employed to care for peak loads.

The A. O. Smith Corporation, of Milwaukee, Wisconsin, has centralized control of transferred material under the Central Filing Department and is working toward complete central control of all filing, along the lines outlined above.

The general offices of The Babcock & Wilcox Company utilize a similar idea in several of their divisions. Subject files are set up in accordance with a master subject index and the Office Planning Section works out additional designations when necessary. The filing is performed within each department, division, and section, but under the guidance of a file supervisor and the Planning Section.

Routine of filing department operation. Assuming that the filing function is organized on a centralized basis, at least as far as such a plan is practicable, the following routine of filing department operation is typical.

1. When a letter is received in the filing department from the incoming-mail department, it is first time-stamped. A file clerk then reads enough of the letter to determine whether it will be necessary for the recipient to have the file containing the previous correspondence in order to answer the letter just received. If the previous correspondence is necessary, the folder is taken from the files, charged to the dictator to whom it is sent, and forwarded, together with the incoming letter, to the proper person.

2. After the reply has been dictated and transcribed and the original letter signed, the carbon copy, together with the original letter and the file holder, if it has accompanied the correspondence, is returned to the files. In many companies the dictator or his secretary indicates the name of the company, person, or subject under which the reply is to be filed. In this way letters addressed to one company but referring to business with another are insured proper filing. Similarly, in cases where two copies are made of a letter for the purpose of filing each under a different name, marking them in this way makes certain that they will be placed by the file clerk in the correct folders.

3. The carbon copies of outgoing letters, together with the original copies of incoming letters, are then sent to the head file clerk's desk for sorting and for stamping specific filing instructions to the file clerks. In this way the head file clerk not only is kept in constant touch with the papers passing in and out of her department, but any matters which deserve special comment or instructions are taken care of at the right time—before they get into the files.

4. After all returned papers have had the attention of the head file clerk or her immediate assistant, subordinates proceed to sort them for filing and refiling purposes. Old files are placed in a pile by themselves and the unfiled papers are sorted alphabetically, numerically, or by subject, as the case may be. When the volume of sorting work of this kind is large, a sorting device (sorting tray, flat sorter, or the like) applicable to the specific problem is recommended.

5. If index and cross-reference cards are used, they should be prepared before new material is finally put away. The preparation and use of indexes and cross-reference cards is discussed in a subsequent section.

6. The last step in the filing-department routine is the actual filing or putting away of the new material in the file folders. The almost universal custom is to place the letters in the folder so that the last date is on top, or, in cases where a numerical system is used, to place the letter so that the highest number is on top of the folder.

The charge-slip system. Mention was made in the previous section of the fact that when complete file folders or individual letters are removed from their place in the files, the person to whom they are sent is charged with them. The usual charge system consists, in the case of an entire folder, of inserting in the files in place of the folder an 8½ by 11 inch card of distinctive color which is prominently marked "Out" at the top. On the body of the card are columns for noting the date on which the folder was removed from the files, the person to whom it was charged, and the date on which the folder was returned. The same plan may be used in the case of individual letters, the only difference being that in this case a single sheet of paper rather than a card is substituted in the file folder in place of the letter which has been removed.

Too much emphasis cannot be laid on the importance of pro-

viding, in any filing system, for some such charge plan as has been outlined. One of the chief reasons why filing systems, both centralized and departmental, do not always yield the best results is that no systematic method is provided whereby a proper record may be kept of material removed from the files. It should be obvious that, just as soon as anyone in the organization is allowed free access to the files and no provision is made for charging material taken out, the system must fail sooner or later.

Methods of controlling papers. The charge-slip system just outlined provides one effective method for controlling papers in a centralized filing department. The establishment of a strict rule that no one but file clerks shall be admitted to the filing department, much less have access to the files themselves, is another practical means whereby the operations of the filing department may be made more effective. In some companies it is a rule that all papers must be returned to the files every night, even though they may be required again the next day. Many banks and stock brokerage houses keep daily records of all incoming and outgoing correspondence. This is a relatively expensive method of controlling papers, but it is sometimes warranted, particularly where large sums of money may depend on the contents of a single letter.

Checking the work of the filing department. The practice of having the head file clerk make a periodic spot check of the file folders to determine the accuracy of their contents has much to recommend it, not only from the standpoint of finding possible errors, but also because of its effect on those doing the actual filing.

As a matter of fact, there is no reason why the work of the filing department should not be audited in exactly the same way as that of any other department. In addition to periodic checks by the supervisors, office managers themselves, in a number of companies, make such inspections occasionally. For example, the office manager or the person making the file audit may list a hundred letters or other papers by name and date as they come across his desk during the ordinary day's work. At the time of the audit he may ask that these be secured from the files, or that a statement be made of who has them, if they are charged out of the file.

Another approach is to examine in detail a dozen or more folders picked at random from the files. In any case, the primary pur-

that the office manager and his file supervisor have against such accusations.

The office manager should also be interested in the efficiency of his filing section. By comparing the volume of work accomplished daily and the time consumed in the various operations with carefully established standards, he can determine a fair day's work for each employee and control his filing costs intelligently. The nature of filing work differs in every organization; therefore, standards must be set in each office individually. However, the following statistics, which were compiled by the Chicago Bureau of Filing and Indexing from a survey of manufacturing concerns, banks, insurance companies, and some government offices, can be useful as a check on individual established standards:<sup>2</sup>

1. To file cards in an alphabetical file.....	297 pieces per hr.
2. To mark $8\frac{1}{2} \times 11$ letters for a name file and make the first A-Z sort .....	291 pieces per hr.
3. To sort and file letters in an alphabetical file..	176 pieces per hr.
4. To file only papers in an alphabetical file ..	350 pieces per hr.
5. To find papers in an alphabetical file.....	94 pieces per hr.
6. To sort vouchers in a numeric file .....	512 pieces per hr.
7. To file vouchers in a numeric file .. .	451 pieces per hr.
8. To file papers in a geographic file; state, town, and name .. .	308 pieces per hr.
9. To file data by subject .. . . . .	147 pieces per hr.
10. To sort into a flat sorter.....	759 pieces per hr.

**Types of filing systems.** A competent file supervisor must be acquainted with the five basic systems of filing, which are alphabetical, numerical, subject, geographical, and chronological. Other filing systems are in use, but they are adaptations of these basic systems. Therefore, the file supervisor must be acquainted with the advantages and disadvantages of the major types so that she may evaluate a file system and judge its utility. It must always be borne in mind that no system is proof against errors made by careless, incompetent clerks, nor is any one system superior to all the others. A filing system must be selected for a particular need, and the fitness for the work in question is the practical test which must be met.

**The alphabetical filing system.** This system is the most direct, the oldest, and the most widely used today. Ninety per cent of

<sup>2</sup> *The Filing Bulletin*, Chicago Filing Association, June, 1944, p. 78.

all filing is alphabetical. It is a direct system because no index is required to locate material in the file. It uses alphabetical notations on guides, generally of heavy pressboard, on which the captions may be terminal, such as Aa—Ac, Ad—Ah, and so on; non-terminal, such as Aa, Ad, and so on; or inclusive, such as Aa Ab Ace Aco, Bab Bac Bad Bag, and so on. Advocates of the inclusive caption maintain that the combinations appearing on the guide are those met most frequently when material is filed and clerks and file clerks have to perform very little mental spelling. Filing becomes a matter of matching letter combinations. All of the above types of guide are supplied in alphabetical subdivisions ranging from 25 to 10,000 divisions. In many cases, special name guides are inserted to cover those names which appear very frequently within a file—for example, American, Consolidated, and United.

The primary advantage of the alphabetical system is its simplicity, which reduces the training necessary for file clerks who use it and enables those who may not be entirely familiar with the filing arrangement to find whatever they wish in cases of emergency. Its disadvantages lie in the fact that, as it grows, the alphabetical guides must be replaced by other sets which are more finely subdivided, thus increasing the difficulty of filing and possibility of misfiling correspondence. The former disadvantage can be overcome by making each file clerk responsible for a particular section of the entire file so that she may become more familiar with the organization of that section, thus decreasing the tendency to misfile.

*The numerical filing system.* The numerical system was popular in the early 1900's because alphabetical equipment had not been perfected at that time and because the opinion was held that, after the necessary coding, filing and finding could be accomplished by less efficient personnel. From the time of the development of improved alphabetical systems, the numerical system lost ground rapidly and is today used mainly by lawyers, architects, contractors, and engineers. Numerical filing is an indirect method of filing, since a cross-index must be maintained in order to find the filed material. A number is assigned to each correspondent, case, or project and the numbered folders are filed in numerical order. Miscellaneous material must be maintained in a separate alphabetical or subject file. The advantages of the numerical system are that material once coded may be filed faster than in an alphabetical file and that a numerical file can be expanded in-

definitely. The disadvantages are that the entire coding and filing process is about 50 per cent slower than straight alphabetical filing and thus more costly. There is no satisfactory provision within the system for the filing of miscellaneous material, and the opportunity for errors through a transposition of numbers is present. Such errors once made are difficult to trace. The numerical system is used mainly in files where the jobs, clients, or subjects each have a number that acts as an identification mark; for the filing of confidential records; for handling a rapidly growing file; and in files where there is extensive permanent cross-reference.

*The subject filing system.* The subject filing system is the most involved method of filing material, but at the same time it is the most useful filing system for handling certain types of material. A subject file is a source of data, statistics, and information that could not be filed in any other manner.

The installation of a subject file requires care because no filing system is more open to failure, none requires more safeguarding, and none can be more quickly wrecked by carelessness. It requires more experienced workers, it is slower work, and it is more costly. A study must be made of the various departments and the functions of each as well as of the type of material each department sends to the file and how it requests material from the file. Department heads and executives should be consulted regarding technical details. Subject headings must be carefully chosen so that synonyms may be eliminated and so that subjects can be specific, significant, and technically accurate. Dictators and secretaries should be encouraged to indicate the subject on each letter which is sent to the files, but this suggestion must not be regarded as authoritative. The final decision must rest with the file supervisor, who is responsible for maintaining uniformity of terms. An outline of subject file headings should be furnished the entire organization by the file department to guide them in their requests for information.

*The geographical filing system.* The geographical system is a direct method of filing and is used mainly by publishing houses, mail order houses, wholesalers, and various types of sales organizations. As in the case of alphabetical systems, equipment houses supply standard sets of guides which may consist of a set of state guides subdivided to the required degree by auxiliary sets of county and city guides. Individual folders are filed behind the proper city guide, and in those cases where but one or two papers

are filed each year for a given customer, miscellaneous city or miscellaneous state folders are used. Where the file is large enough, an auxiliary alphabetical set of guides and folders may be used to expand the file at any point where an unduly large amount of filed material collects.

The main advantage of a geographical file is that a desired review can be made of the activity in any given territory merely by removing the town, county, or state from the file. The disadvantages of the system are that there is an increase in labor cost inasmuch as geographical filing is roughly 33 $\frac{1}{3}$  per cent slower than alphabetical; there is an increase in the possibility of errors; and the location as well as the name of filed material must be known, or else an auxiliary alphabetical index must be main-

tasteful task, because it adds to the burden of clerical work. It is important to recognize the fact, however, that the use of office space to store a considerable quantity of material which might as well or better be stored in less expensive quarters is much too wasteful and expensive a procedure to follow. Moreover, equipment used for filing active material is considerably more expensive than transfer cases, which are ordinarily used for inactive material and serve the purpose equally well.

The first step in transferring material from the active to the inactive files is to decide what material can be deemed active and what inactive. Naturally, the decision on this matter will depend not only on the kind of business in which the company is engaged, but also on the nature of the material itself. In a manufacturing business, for example, the unit of work is usually the customer's job or order. When the work has been completed on a particular order and the last shipment of the goods made and paid for, that transaction is usually completed and closed. In such cases all correspondence and papers relative to the order should be kept in the active files for, say, three months after receipt of payment. At the end of this time they may be removed. In the same company, however, received bills for purchases made will naturally be kept until after the legal time limit for bringing suit, as set forth in the statute of limitations, has expired. On the other hand, banks and brokerage houses are necessarily forced by the nature of their business and by government regulations to keep some of their documents for a considerable length of time, although this material does not remain indefinitely in the active files. Insurance companies necessarily preserve all papers in connection with every policy issued. This is done for their own self-protection, as well as in the interest of the policyholder. When one considers that many insurance companies have outstanding millions of individual policies, every one of which is of vital interest to a number of individuals, the importance of this matter, as well as the complexity of the whole problem of record-keeping, becomes more apparent.

**Legal limitations.** How long records and correspondence having to do with contractual relations should be kept depends, among other things, upon the several state laws covering the period during which suits may be brought. As any given state may have prescribed as many as eight different periods of limitation for civil actions, a complete listing of these periods is not given here. They

may be found in detail in the *Credit Manual of Commercial Laws*, 1939, or as reprinted in *The Disposition of Inactive Records*, published by the Policyholders Service Bureau of the Metropolitan Life Insurance Company, and in *Retention and Preservation of Records with Destruction Schedules*, published by the Chicago Bureau of Filing and Indexing, 1946.

The statutes of limitations, however, are not the only legal factor involved. Fraud is never outlawed. Any record that may involve a case of fraud should have thoughtful consideration before

**Classification of records.** As is clearly indicated by the foregoing discussion, it is impossible to lay down definite rules that will hold good in all cases. Nevertheless, by making a simple, common-sense analysis of the various kinds of records in a company, the procedure to be followed in each case can be determined without difficulty.

Such an analysis will show that there are, in the main, three classes of records for which a definite plan must be provided. The most important are (1) those records which contain or refer to the broad, underlying policies of the business. Such records are the "common law" of that business, one might say, and for this reason they must be kept accessible indefinitely. Next are (2) the more important records of progress, such as annual reports, summaries of departmental operations, financial statements, and so on. It is usually necessary to retain in the active files only those of a few previous years, since the report of any given current year is frequently compared with the corresponding one for the previous year. Of the least importance are (3) the records which have to do with routine matters, such as routine correspondence, inter-office memoranda, daily or weekly departmental progress reports, and so on.

With a classification such as this in mind, one can readily enough decide into which of the three groups any particular piece or class of material falls, and thus establish a definite procedure for its transfer. In general, material in class 1 should be kept indefinitely, that in class 2 should be kept from three to five years, while class 3 material may be disposed of at the end of a year.

**File-transfer methods.** Having classified the records in some such way as just described, the next step is to decide when and how the material is to be transferred from the active to the inactive files. There are three ways in which this may be done. One plan is to transfer each year, intact, the entire material of the second preceding year. Thus, for example, the 1947 routine correspondence, periodic reports, and other material, which would fall in classifications 2 and 3 above, would be transferred in January, 1949, from the active to the inactive files. When this method is

followed, there is always at least one year's back material in the active files. If the classification of papers has been properly made, it is not likely to be necessary to make any more than very infrequent reference, at the most, to the material in the inactive files.

A second method, which is a variation of the first, is to transfer material of a certain age, say, one year, periodically from the active to the inactive files. This transfer may be made as often as may seem desirable; every three months is a very usual period. This "continuous transfer" method has the advantage of spreading the work more evenly over the year rather than concentrating it once a year, as is done in the case of the first method. Moreover, the continuous method avoids the sudden break that necessarily occurs when the first method is used.

A third method of transferring material from the active to the inactive files is to use a specific unit of work, such as a customer's job or order in the manufacturing business previously cited, as a basis for deciding when material is to be transferred. If this plan is used, the file clerks can be instructed to hold open as active a folder with a given order number until some definite point in the transaction has been reached, such as the receipt of a check in payment of the goods. After allowing a period of grace, such as a week or ten days, beyond this limit, during which any odd papers that may be out in the hands of the various office departments will be returned, the file clerk may consider that job order number closed, and transfer it to the inactive files.

Arrangement of records in inactive files. Having decided when the material is to be transferred and how this process is to be carried through, there remain for consideration the arrangement and storage of the records in the inactive files. This matter may be discussed logically under three heads: (1) the possible places of storage, (2) the kind of equipment best suited for record storage purposes, and (3) the way in which the material should be arranged.

Storage space. Either one of two places is to be recommended as suitable for the storage of inactive material. In a number of the larger cities, rooms especially designed for the purpose normally are available in certain public warehouses. In some cases these rooms are entirely empty; in other cases filing equipment is provided. Some warehouse companies even provide file clerks, whose services are available when papers are to be brought in or removed. The use of warehouse space by business firms for the storage of inactive records seems to be increasing. The chief advantages to

be secured by the adoption of this plan are the security of records against damage or loss by theft, fire, or vermin, and their accessibility. Payment is made, of course, only for space actually occupied.

A number of larger business organizations maintain their own warehouse buildings for record storage. Among these are Westinghouse Electric Company in Pittsburgh, Metropolitan Life Insurance Company in Bronxville, New York, and Prudential Life Insurance Company in Newark. Under such an arrangement valuable space at the general office and at branch offices is conserved, yet the records are afforded the protection and care they require. In the case of Prudential, a five-story building is devoted entirely to filing operations, both inactive and active. This is made possible by the close proximity of this building to the home offices.

Most companies, however, store inactive records in their own offices. In this case the space used should be that which is the least desirable for general use. In every office there is space that has little or no natural light, or where the ventilation is poor. Such space may be effectively utilized by fitting it up as a storage room for inactive records. Study of the existing layout and space occupied will usually reveal that there is room of the kind just described suitable for storage purposes.

**Equipment needed.** The matter of selecting the proper equipment for storage purposes is fully as important as finding a suitable place for it. In this connection the office manager must strike as nearly as is practical the proper balance between two extremes. It is a senseless waste of money, on the one hand, to invest in storage equipment of the same quality and type as that used for the filing of active material. On the other hand, the use of cheap, flimsy containers is equally poor economy. A primary consideration in connection with the transfer of records from the active to the inactive files is that the material, inactive though it may be, will be in perfect condition for use whenever the need may arise. It is, therefore, simply common sense, as well as good management, to use equipment of sufficiently high quality to safeguard adequately and properly the records stored therein. Durable and suitable transfer filing cases, especially designed for the purpose, are made by a number of reliable manufacturers of office equipment, and it is this type which the office manager should use for transfer purposes.

Filing inactive material. Last, but by no means least, careful consideration must be given to the method to be used in arranging the material in the inactive files. From observation of the method, or, more properly speaking, the lack of method, of a considerable number of concerns, the writer has no hesitation in saying that the chief point for the office manager to bear in mind in this connection is the fact that an archives department is not an enlarged waste-paper basket or a household attic. The proper storage of inactive records demands that the material be put away in an orderly and systematic manner, so that it can be found as readily and as easily as material in the active files. The practice of tying up inactive records in huge bundles and stacking them ceiling high in the storage space, as often as not without even a tag, or at best with one which is descriptive of the content of the package only in the most general way, is largely a waste of time and money. It may take a little more time to place the material carefully and in an orderly manner in transfer cases, marking each plainly with a label, but the results more than offset the effort. As a matter of fact, there is no good reason why it should not be just as easy to find inactive material as that which is active and, in all well-managed companies, this is the case. If the inactive records cannot be found when they are needed after they are stored, the money and effort expended in storing them has been wasted.

#### THE WESTINGHOUSE ARCHIVES BUILDING<sup>4</sup>

An entire building has been acquired by Westinghouse Electric Corp., in Pittsburgh for the storage of records and the storage and maintenance of surplus office equipment. The Archives Building is 80' by 300' and provides 144,000 sq. ft. on its five floors and basement. Part of the first two floors contains the offices of the building's staff. Fireproof vaults on the first floor house microfilm. Floors three, four and five are fitted with 37,728 ft. of steel shelving 37" wide, which is installed in four-shelf tiers to provide filing space for 18" deep boxes. Two sizes of boxes are used; one size for 5" X 8" or smaller records and another size for records up to 8½" X 11". Some 200,000 of these boxes will rest on the shelving.

The building will relieve the central records bureaus, located throughout the far-flung organization, of their rapidly accumulating piles of inactive records. In many cases, high rental was paid for outside storage and, even then, the facilities were not ideally suited to the job. The

<sup>4</sup> Neaidengard, R. C., "Westinghouse Archives Building," *The Office*, September, 1946, p. 74.

Ease of reference to records includes the factors of speed and convenience. Assuming that both the original records and the microfilm are stored in reference rooms and that both are indexed as completely as possible, it appears that there is no appreciable difference in the speed of reference between the two methods of filing. It is impossible to quote any exact figures, however, because ease of reference depends upon such things as the total number of documents from which a given record must be selected, the form in which the physical records are kept (card file, letter file, bound volumes) and several other variables. The speed of reference to microfilm varies with the total number of reels from which the proper reel must be selected and with the nature of the indexing system.

The next factor is convenience of reference. It must be realized that in most microfilm installations designed primarily for reference, there is only one working film available on the premises. The central filing department will have this reference film and requests for information regarding a given document can be answered over the telephone. However, should the interested party desire to see the document, the information being too voluminous to permit of transmittal over the telephone, it is necessary for the film to be consulted in the filing department unless desk readers have been distributed at strategic points throughout the office.

The second point to be considered is the amount of space saved when reference files are placed on microfilm, and the value of the microfilm process to a particular concern may well hinge upon this factor. Microfilm will occupy approximately 1 per cent of the space required by records stored in files. If space is the most pressing problem, the application of microfilm deserves serious investigation.

The third factor to be considered when weighing the use of microfilm for reference files is the necessity for making reproductions. An immediate objection to the use of film arises from the fact that the films can be used only for reference in a reader and it is not possible to present an individual document to the person requesting it. However, microfilm, as commonly used, is in negative form, and should it be necessary to produce a copy of an individual document, a facsimile can be created with but little difficulty in a number of ways.

Only after weighing these factors can the office manager determine what part microfilming should play in the solution of his record storage problems.

Analyzing the work of the filing department.<sup>6</sup> The following questions indicate a method which the office manager may use to audit and analyze the work of the filing department. The list is intended, of course, to suggest a method of attack and not to be inclusive.

---

<sup>6</sup> *Office Management Handbook*, National Office Management Association, 1947.

1. Is centralized control of all filing maintained?
2. Is physical centralization introduced wherever possible?
3. Are files examined to eliminate the maintenance of duplicate material wherever possible?
4. Is there a list or a chart showing the location of files?
5. Are files neatly and clearly labeled?
6. Is a workable "out" system used?
7. Are the most accessible file drawers used for files most frequently referred to?
8. Is the filing production maintained so that work does not pile up?
9. Is filing production measured and standards set for various classes of material?
10. Is each drawer of each file cabinet equally filled?
11. Is there sufficient space for future expansion?
12. Examine 1,000 pieces of filing for accuracy. There should be fewer than 10 errors in the thousand.
13. Examine the contents of one file drawer. Were all of these papers worth filing?
14. Is it a practice to mark the retention period of all material before it is sent to the files?
15. Is the filing system simplified to the greatest extent?
16. Is each file clerk made responsible for a certain section of the filing?
17. Are new file clerks adequately trained?
18. Has a definite retention period been established for all classes of office records?
19. Is this retention period maintained and obsolete material destroyed?
20. Is someone assigned to police this matter?
21. Has microfilming been investigated to determine whether money can be saved by using it for those records which must be maintained either permanently or for long periods of time?

## 8

# *Organization and Work of the Stenographic Department*

**Evolution of dictation and stenographic methods.** For many years the accepted practice in business offices was to furnish everyone of any importance with a private secretary and a private office. Junior executives who, as a matter of fact, had only a limited amount of authority in the organization were, nevertheless, dignified by these supposedly inalienable rights of the executive. In many cases, needless to say, neither of these pieces of "stage setting" were necessary or even desirable. Moreover, they were inevitably expensive.

Some twenty years ago the movement toward the centralized stenographic department began. Gradually, first one firm and then another began to see the desirability of transferring to a centralized typewriting department certain routine straight copying and typing work. Thus the private secretary who did not become a member of the centralized stenographic group was left with less work to do. Today, one may go into a very large number of concerns and find that only the chief executives and the more important members of the organization have private secretaries for their own exclusive use. The junior executive's former private secretary has become a member of a centralized stenographic department.

The invention and constantly widening adoption of the dictating machine has had an important influence on this development. Where such equipment is installed, the usual practice is to supply all or most of the dictators with a dictating machine and concentrate the transcription work under the direction of a supervisor in a centralized transcription department.

**The private secretary.** From what has just been said, it should not be assumed that the private-secretarial arrangement is a thing of the past, nor that, under certain circumstances, it is not the most practical method of organization. Like the private office, certain executives are entitled to, and need, private secretaries.

The office manager is likely to have two principal responsibilities in connection with the private secretaries: First, he is expected to be reasonably familiar with the kinds of work which these employees can and should do; second, as chief personnel officer, he may be asked by one of the executive officers to assist in selecting a secretary.

Duties of the private secretary. The position of the executive and the nature of the business organization will determine, for the most part, the duties of the private secretary and the relative importance of these duties. However, the following list is representative of those found in most responsible secretarial positions:

To take routine and some specialized dictation, such as financial, legal, engineering, or a combination of all.

To transcribe shorthand or dictating machine records.

To make notes of conferences or meetings; sometimes testimony.

To organize and maintain specialized files.

To organize the local office routine, including incoming mail, handling of the principal's appointments, arrangement of travel and hotel reservations, and other similar details.

To gather material for reports and often to prepare the entire report in rough draft.

To organize and manage the work for the clerks and stenographers in the immediate office, so as to produce the information and facts required by the executive.

To handle whatever of the executive's personal affairs he might request.

To handle callers for the executive and, wherever possible, relieve him of the burden of dealing with routine matters.

In general, to preserve as much of the executive's time as possible so that it may be devoted to the planning and administration of those affairs of the company for which he is responsible.

Personal traits of the private secretary. In addition to the technical ability required in various secretarial situations, the following personal traits are generally essential:<sup>1</sup>

### EFFICIENCY

*Punctuality*—On time in the morning and at noon; on time with work when required.

*Cooperation*—Attempt always to see from the other's viewpoint.

*Accuracy*—Standardize, wherever possible, to avoid errors; double check to eliminate them.

### LOYALTY

To the boss and to the business; avoidance of petty gossip, the guarding of office information.

### INTELLIGENCE

The ability to reason clearly and to apply acquired knowledge to the successful solution of problems arising in new situations.

Practical application of the foregoing capacities concerning the duties and personal traits essential to success in secretarial work will help the office manager to carry out such responsibilities as he may have regarding the supervision and selection of these employees.

Conditions in the average office. An impartial study of conditions in the average office in which all stenographic work is decentralized or departmentalized is likely to reveal the existence of a number of uneconomical and inefficient situations.

If a time study were taken of the amount of work actually done by the various private secretaries in an office where such an arrangement exists, it would be found in most cases that there is a surplus of stenographers. In other words, the tendency is always to employ more stenographers than necessary. It may happen, for example, that there is more work in a given department than one secretary can handle, yet, when an additional person is hired, there is not sufficient work to keep both girls adequately employed. Furthermore, the amount of work which private secretaries are called upon to perform varies widely between departments. Owing to the nature of the work, or to the habits of the department head, one girl may be kept extremely busy and, as a matter of fact, have more work to do than she can turn out. The girl in the next office, however, having a similar position, may have the problem of making five hours of work a day cover seven hours' attendance at the office. Naturally, such conditions lead to petty jealousies and charges of favoritism on the part of one girl.

It is also true that often the girls do not possess the same ability

and training. Too frequently secretaries are judged by the department head at the time they apply for work on factors other than those of capability. The result is that one may find girls who are exceptionally well qualified for the work and others who are poorly trained receiving equal pay.

Perhaps the most important practical difficulty with the whole private-secretarial arrangement is the annoyance to department heads when the secretary is absent on account of illness, vacation, or other causes. In such cases, it is necessary, under the private-secretarial plan, for the department head to make special arrangements to borrow someone else from another department temporarily, an arrangement which is highly unsatisfactory to both the department head and the employee.

Production and costs of centralized and departmental plans compared. The experience of Thomas A. Edison, Inc., manufacturer of Ediphone dictating and transcribing machines, and the data which it has secured, during hundreds of surveys of the methods of handling correspondence in offices of all sizes and types of business, amply substantiate the foregoing comments.

In a work day of 480 minutes, secretaries and stenographers, using shorthand and working under the decentralized plan, spend their time, on the average, as follows:

11%	taking dictation
18%	transcribing dictation
18%	copy work
45%	clerical
5%	non-productive
3%	absent

Under a centralized plan, using dictating machines, the time was spent as follows:

91%	transcribing
6%	rest
3%	absent

In the majority of cases where centralization took place, the clerical and copy work which the shorthand stenographer was performing could be assigned to other clerical workers on a lower salary scale.

Measurements of production showed that the stenographer averaged 42 lines per hour (including time for dictation), whereas

when the work was centralized with dictating machines, the production was 120 lines per hour. Based upon an average wage of \$38 per 40 hour week, it cost \$22.80 per 1000 lines under the decentralized, shorthand method and \$7.89 per 1000 lines under the centralized, dictating machine plan. Translated into costs per letter, the former method averaged \$.264 per 12-line letter and the latter, \$.094 per 12-line letter.

It would seem, then, that here is a fertile field for study on the part of any office manager who is interested in speeding up service and reducing unit costs of operation.

**Advantages of a centralized stenographic department.** Among the advantages accruing to an organization that establishes a centralized typing and stenographic unit are these:

1. The surplus of workers in each department is reduced, and the surplus in the central department is increased, providing an organization for handling peak loads.
2. Work is properly assigned according to class of work.
3. The work is equally distributed.
4. Less time is wasted.
5. Wages are consistent.
6. Definite standards are maintained; uniform quality and style of work will reflect credit on the firm.
7. There is no distracting noise; typewriting is isolated from executives and clerical workers.
8. All stenographers receive better training.
9. Work is not held over in the absence of a stenographer, as her work is done by others.
10. Stenographers are familiar with each dictator's style and dictation—not just with that of one.
11. There is a continuity of work—the work is not affected by the coming and going of the personnel of the central department.

**Disadvantages of the centralized plan.** There are, however, certain possible disadvantages of a centralized stenographic arrangement. These may be summarized as follows:

1. Dictators develop preferences for the more efficient, better-looking stenographers. Stenographers likewise request "steady" assignments and do not like to change dictators frequently. This objection is not present when dictating machines are used.
2. Unless costs are charged back to the departments using the services, there is a tendency to assign work which, upon analysis, is seen to be unnecessary.
3. Dictators dislike having their work scheduled and frequently demand "rush" service.

which the department will operate, despite absences due to illness and vacations.

Generally, the best girls should be assigned to machine transcription, the next best to stenographic, and the least competent to the copy work. Copy work is normally assigned to girls who have been typists, although the typing they will do is, of course, by no means to be confined to that of the department from which they have been transferred.

The reasons for the assignment of the best girls to machine transcription merit a word of explanation. In transcribing shorthand notes, stenographers have two advantages over dictating-machine operators. First, the stenographer reads with her eyes, the dictating-machine operator must read with her ears—and since most persons get a much more definite impression through the eye than through the ear, the stenographer has a natural advantage. Furthermore, the stenographer has not only heard the dictation once, but has had an opportunity to ask questions, while the dictating-machine operator, listening to the cylinder or record, is hearing the dictation for the first time. She must be keener, have a better background, a better power of concentration, and initiative and courage enough to write good sense and good English no matter what she may think she hears.

Much depends on the collection and delivery system—the collection of cylinders or records and folders in the case of a dictating-machine installation, and the delivery to the dictator of both dictating-machine and shorthand transcription. Collection of cylinders or records from dictators' desks, or from a central station in each department, should be made at least hourly. It may even be advisable to have half-hourly collections in the early afternoon. The messengers assigned to this work should see that the dictators are supplied with cylinders or records at all times, and that the transcribed cylinders or records are collected from the operators' desks promptly.

A practical way to get started. One practical and simple way to introduce the organization of a centralized stenographic department, particularly in a company where there may be some opposition, is to start on a small scale with a few departmental stenographic workers, guaranteeing to serve satisfactorily the departments from which they are taken. Sometimes the work of the departments is such that two or three or more of them have extra work which their regular employees cannot handle and they are

chines, business requirements; are deficient in work methods, spelling, punctuation, accuracy, and speed.

4. In most offices supervision is poor, discipline is lax. The increase in quantities of work to be done has created a let-down in quality of work.

5. Failure by business to train and instruct, to correct habitual errors, to keep production records, and to teach best use of equipment perpetuate the low skills acquired in schools.

Many companies have found the only answer to the problem of the green operator is to put her to work as a page, messenger, clerk or helper, giving her free time to attend classes or to practice.

Eastman Kodak Company, The Pennsylvania Company, Quaker Oats Company, Swift & Company, Northern Trust Company, many large insurance companies and other employers of typists start operators in messenger and clerical jobs, and put them through a training course or school until they qualify as typists or stenographers.

Executives of these companies point out there are five important points in any program of cutting typing and stenographic costs. They are:

1. Determining the skill of beginners and placing them on work at the proper level.

2. Conducting a planned training program to prepare beginners for higher jobs as typists and stenographers.

3. Use of a company manual, style book or instruction sheets to standardize style, methods, and practices.

4. Strict supervision to maintain best working habits and methods. Instruction in proper use of equipment.

5. Use of motion study, job instruction and job planning. Better work assignment methods.

*Testing new operators.* The first step in any cost-cutting program is to test every new operator as soon as hired. This test is not the usual pre-employment examination. It covers a wider field and is designed to determine present skills, enable the supervisor to assign work for which the employee is fitted, and to plan a training program to develop the speed and accuracy required of the employee.

It is not enough to give a test which consists simply of copying a page or two of material, then checking the work for errors and making an estimate of speed. Neither is it enough to ask a beginner to transcribe the dictation and use the result as an example of her skill.

Tests should include typing from corrected copy, tabular matter, detecting errors in a list of commonly misspelled words, and perhaps questions to determine the operator's familiarity with the machine used. Many executives think speed, as expressed in words-per-minute, is stressed too much in deciding an operator's skill. More elaborate tests require the typist to: set up material such as columns of statistics; arrange material, such as reports, in the proper form; answer questions on the use of the machine; center columns of words and figures; space

standard secretarial manuals for drills in punctuation. Similar sources are used for brush-ups or training in English and grammar.

In a number of large offices typists are graded according to the type of work they do. There may be as many as four different grades of typists, such as beginners, juniors, seniors, experts. Or they may be called by the types of work assigned to them—copy typists, transcribers, stenographers, statistical typists—the last named being the most skilled and highly paid of all.

As the training program is finished it is important to determine what type of work should be assigned to each operator who completed her course. It is an advantage to have the work as carefully classified as possible; so an operator who has just barely come through training with passable grades may be assigned to simple tasks, while one who shows great skill and possibility may be given more difficult work.

Another advantage of classifying the work is that the girl has more chances for promotion. There should be pay differentials for each class of work.

Once the operator is finished with her training and is assigned a full-time typing job, the training is by no means completed. In departments such as those operated by Le Tourneau Company, Northern Trust Company, General Electric X-Ray Corporation, Quaker Oats Company, Eastman Kodak Company, Workman Service, Inc., and others, training is perpetual and never ceases. Only through constant training and careful supervision is it possible to maintain the quality and quantity of work needed in modern business.

*Preparation and use of manuals.* Practically every well-managed typing department uses a manual for typists. For example, Union Carbide & Carbon Corporation uses a 56-page, 8½ by 11-inch book for the spelling and shorthand symbols of technical words alone. General Electric X-Ray Corporation uses a 38-page, 8½ by 11-inch book of five sections as a manual for its stenographers and transcribers. One of Chicago's largest banks uses a loose-leaf, leather covered, 88-page, printed manual; while United States Gypsum Company uses 32 Mimeographed and Dittoed pages stapled together for the same purpose. Other companies have less comprehensive manuals in the form of small notebooks with the necessary instruction.

Many companies started with informal, typed or duplicated manuals, gradually adding information until it was possible to publish a formal, printed, well-illustrated manual. R. G. Le Tourneau, Inc., of Peoria, uses illustrations of its various machines, with brief descriptions of them. In some organizations a company catalog will serve this purpose better and the supervisor should decide whether a company catalog should be part of every typist's equipment. A price list may suffice, or some other list of products.

Almost every company will need special sections in its manual, such as a list of railroads and their abbreviations included in United States Gypsum's manual. Another company might need a list of salesmen, a list of best customers, wholesalers or distributors. Still another com-

have designed a lift box, which is a platform 2 to 4 inches high, on which the typewriter is placed, raising it from 26 to 28 to 30 inches. About 3,500 typists in the Department of Agriculture at Washington are using these lift boxes.

*Teaching proper use of machines.* Beginners and even some experienced typists are not adequately acquainted with their machines. The supervisor should instruct every member of the typing department, paying particular attention to the following items:

1. Proper method of inserting papers in machine.
2. Returning carriage with proper stroke or motion.
3. Rhythm and even touch in operating.
4. Using tabular stops to minimize use of space bar.
5. Typing special symbols and characters such as %, @, \*, /.
6. Short cuts in reinserting and lining up typed material.
7. Chain feeding cards, envelopes and small forms.
8. Short cuts in jogging and inserting multiple copy jobs.
9. Stencil cutting.
10. Centering, placement, typing tabular jobs, etc.

No typewriter can be used properly unless it is kept scrupulously clean. Set a time for daily cleaning, wiping and brushing. Do not permit operators to oil typewriters. Have a mechanic to do that or call the serviceman from the typewriter company. Make liberal use of servicemen to keep machines in the best possible condition, having platens treated (or buy new ones) as frequently as necessary. Petty economies, when compared with present-day salaries, are false economies in typing departments.

*Job instruction and work organization.* Executives at People's Gas Light & Coke Company say they have cut typing costs as much as 50 per cent by determining the correct placement of work on the desk, by planning, by providing written instruction for each new job, and by motion study.

It is impossible to establish strict procedures on the "mine run" of work, but where certain heavy jobs come into the department at regular or frequent intervals, considerable study is warranted in preparation of job instructions. For example, at a large gas company it is necessary to write a considerable number of orders for pavement repair jobs which are let to paving contractors. A 12-page job instruction procedure has been written to cover these orders. It contains a description of the job, which tells why the orders are written. It outlines the routine of the job, steps to follow, the typing formula, gives a hand motion chart, includes a job break-down and a list of addresses of contractors. All the forms used in the job are included in the procedure, with exact instructions for completing each one. Supervisors explain the procedure to new typists, and as the job recurs they use the procedure for reference.

The typing department supervisor of a large bank says the typing department studies forms to find time saving and short-cut opportunities.

signatures, complimentary close, second-sheet headings, identifying initials, and carbon copies. The subject of office manuals, with particular reference to stenographic manuals, is covered in Chapter 16.

When a large volume of correspondence is of a routine nature, form paragraphs and form letters are often used to advantage. In preparing 'form letters, the first step is to analyze and classify routine situations. The office manager, or a specialist employed for this purpose, then prepares a set of letters which, with the appropriate references to the particular letter being answered, such as the name, date, and so on, can be used over and over again. Thus the person to whom the letter is sent feels that he or she is receiving a personally dictated letter. Such letters, of course, are not processed letters, but are merely forms which the typist copies.

In cases where it is not possible to write a form letter which will fully cover every situation, a series of form paragraphs may be prepared for use by the correspondents and dictators. Each such paragraph is numbered. The correspondent, in answering a letter, indicates the paragraph numbers to be used. The typist, in answering the letter, merely refers in her copy of the correspondence manual to the form paragraphs as marked by the dictator and copies them in the order given.

**Incentive compensation plans.** In recent years an increasing number of companies have established wage systems based on the amount of work produced. Such plans have been especially widely adopted in connection with the work of centralized stenographic and transcription departments. This important part of the organization and operation of the stenographic department is treated in Chapter 23.

# 9

## *Organization and Work of the General Service Units*

Methods of handling incoming mail. The handling of mail is almost always centralized. Even in the small office the single office boy usually handles all the mail.

The procedure followed in handling incoming mail in the average company may be summarized as follows:

1. The mail is obtained from the post office by a company messenger, or delivered to the company by the letter carrier. Large companies usually find it desirable to have their own messengers call at the post office to secure the mail.

2. Upon receipt in the mailing department, all mail, except that marked "Personal," is opened. Practice differs with regard to the manner in which personal letters are handled. Many of the larger companies discourage subordinate employees, either directly or indirectly, from receiving personal communications in the office, some going so far as to redirect such letters to the home address of the employees as soon as they are received. Other organizations, however, feel that since the total volume of employees' mail is but a small fraction of the entire amount received, the easiest way, everything considered, is to handle employees' personal mail in the same way that company letters are taken care of.

Letters addressed to specific individuals occupying executive positions in the company may or may not be opened by the mailing department. Some organizations have a rigid rule that all mail, no matter whether it is addressed to the company or to an individual, shall be opened in the mailing department. This plan is followed on the assumption that a large majority of the communications received deal with company business and that, consequently, all mail should be examined in the mail room first so that it can be routed to the right department or individual. The majority of companies, however, have mail which is addressed to individuals delivered directly to them unopened, on the assumption that a considerable number of such communications may be of a confidential nature. While no great harm can come, perhaps, from having them hastily scanned in the mailing department to determine to whom they shall be delivered, occasionally matters might be seen by subordinate employees about which it might be better that they did not know, for one reason or another.

If the volume of incoming mail is small, it is generally opened by hand; if not, either hand or electrically operated mail-opening machines are used.

3. As soon as the letters have been opened, all those containing checks or cash may be put into a separate pile for direct delivery to the cashier's department, or the money may be detached and a notation made on the face of the letter stating the amount enclosed. If the latter method is followed, it is necessary to have one or more clerks in the mailing room enter, on designated forms, the names of customers from whom money has been received, together with the amounts enclosed.

4. As the letters are opened and those containing remittances disposed of in one way or another, they are sorted by departments, sections, and, in certain cases, by individuals. Practice differs widely, but in a large concern the mailing department will sort only by main departments or sections, except when letters are addressed specifically to certain chief executives. Racks or large circular bins may be provided for sorting mail. Some companies make a practice of time-stamping all incoming mail as it is sorted.

5. After the mail has been sorted by departments, it is ready for delivery by messengers to the various departments. Since it is highly desirable that all the steps outlined above shall have been performed and completed by the time the office opens, it is the usual practice to have certain members of the mailing department arrive somewhat in advance of the regular office hours.

**Methods of handling outgoing mail.** Outgoing mail is usually handled as follows:

1. The messenger department collects outgoing mail periodically from the outgoing-mail letter trays or baskets on the desks in the various departments. The organization of this activity is discussed in a subsequent section.

2. As outgoing mail is received in the mailing room, it is folded, inserted in envelopes, sealed, and stamped. Sometimes enclosures, such as booklets or return reply cards, must be enclosed. Particular care must be taken to be sure that all enclosures that are to accompany the letter and the envelope are actually enclosed. Large mailing departments use sealing and stamping machines, operated by hand or electrically. The folding and sealing of all mail, whether by machine or by hand, must be done carefully and neatly, so that when the letter arrives and is taken from its envelope by the recipient, it makes a good impression and does not show signs of carelessness or hasty work.

Outgoing mail should be coördinated as closely as possible with airplane, train, and boat schedules. The head of the mailing de-

partment should find out from the post office the closing hour for mail which is to be sent by a certain train, boat, or plane. Schedules showing the time at which letters must leave the company mailing department in order to meet these closing times should then be prepared and posted in a conspicuous place in the mailing room. Supplementary schedules showing the time of the last departmental pick-up for such mail should be distributed to all departments to enable them to prepare their mail in time to meet the mailing-room schedules. If this practice is followed, letters will reach their destination promptly.

For selfish reasons, if for no other, as much of the outgoing mail as possible should be dispatched early in the day. To this end, periodic collections of outgoing mail should be made from the various departments in the office during the forenoon, and a preliminary outgoing mail should be sent not later than noontime. After this, outgoing mail should be sent away at least every two hours. In this way the inevitable peak load which comes toward the close of the business day may be somewhat reduced.

**Mail handling at United Air Lines.** The foregoing sections have described the methods of handling incoming and outgoing mail in the average business office. In a number of lines of business the mailing problem is of more than ordinary importance because of the exceptionally large volume handled. The practices of United Air Lines offer an excellent practical illustration of what is involved in such cases:<sup>1</sup>

"The new system recently adopted by the mailing department of United Air Lines, which handles more than 3,500 incoming and 3,700 outgoing letters daily, has stepped up delivery of company mail by as much as 2½ hours," reports F. T. Corneliusen, assistant office manager in the Chicago home office. "Mail formerly distributed to home offices at 10:30 now reaches these offices at 8:30. A survey over a 6 months' period shows that errors in mail handling have been cut to less than ½ of 1 per cent.

"This new system has conserved a third of the space formerly used for mailing and has reduced by more than half the number of motions required in many mail handling operations. This space is now used for the addressing and duplicating department. Operations of mail sorting which had required hours now take only a few minutes. Where workers formerly had to take many steps to sort mail into racks, they can now stand in one position. A specially designed sorting turntable saves hours in sorting and distributing our early morning mail, which is always the largest of the day.

"Here at United there is a heavy volume of correspondence and reports every day between the home office and its network of branches and division offices. Fast plane schedules require the work of these hundreds of United Air Lines' departments, branch ticket offices and airways operations offices to flow smoothly with a minimum of peak loads, errors and time lost in mail handling.

"Our problem was to meet these stringent requirements of mail handling operations. To do this we first conducted a time-and-motion study of our mailing procedure and had an extensive survey made by mailing engineers and postal authorities before installing the present system. We made a flow chart, indicating the steps necessary in handling incoming and outgoing mail, which was used as a guide in arranging and designing all mailing equipment."

every half hour until 3:00 o'clock and every 15 minutes from 3:00 to 5:00 o'clock. Air mail is picked up at 5:15. During the day six messengers make more than 3,000 such pick-up and delivery stops. Here are the steps that make this rapid mail distribution possible:

When the bags of mail are delivered to the mailing department, the mail is placed on large sorting tables running the full length of the L-shaped functionally designed mailing room. In back of these tables are racks of sorting compartments for handling incoming and outgoing mail.

In handling incoming mail primary sorting is unnecessary. It is placed on a large sorting table in the center of the room. At the left on this table is an especially constructed metal revolving sorting rack, with four trays on each side.

The lower three trays are for mail going to the three floors of the home office. All mail addressed to the attention of some one in United Air Lines, or to the cashier's department, is placed in the top tray. Only the mail placed in the top tray will be opened in the mailing department. Both incoming and outgoing mail sent in envelopes marked "Company Pouch" is addressed to departments rather than to individuals, so changes or transfers of personnel will not affect this mail sorting system.

As soon as the trays are filled, the revolving sorting rack is turned around. Three girls on the opposite side of the table sort mail for each of the three floors. Mail boxes immediately in back of these girls are grouped for each floor to facilitate sorting. By this method a girl can remove mail from a tray and remain in one position while sorting. Mail boxes are labeled for departments on each floor.

Mail to be opened in the mailing department is removed from the top tray by a girl at a desk to the left of the sorting rack. This desk, which faces the three workers sorting mail into boxes, has an outer rim of six sorting slots. Slots are arranged for distributing opened mail according to floors, just as the unopened mail is sorted. After letters are run through an opening machine and the contents removed, envelopes are passed over a glass surface with a strong light beneath before dropping into another slot at the left of the desk. These envelopes are placed in large drawers marked for each day of the week and held one week before being discarded. The three girls on the opposite side of the desk take the opened mail from these slots and sort it according to departments. Only air mail, special delivery and registered mail are time stamped.

When mail addressed to the cashier's department contains checks or cash, an entry is made on a special form, which has the time and date printed at the top. As soon as this mail is opened, the girl at the desk records on this form the name, check number, date and amount of each check. She then signs this report, and it is delivered immediately to the cashier's department. The cashier indicates the time the checks and money are delivered to this department and also signs the form at the bottom. This receipted form is returned to the mailing department and placed in a permanent file. (See Figure 17.)

Fig. 17—This form, used to record all checks and money, is signed at the bottom by the one who prepares it and is receipted by the cashier's department.

After incoming mail is sorted by floors and departments, it is placed in baskets, ready for delivery about 10 minutes after 8:00 by six messengers—two for each floor. These messengers also make the first mail pick-up of the day at this time, and the mailing department begins sorting outgoing mail. Time required to complete these scheduled runs for each messenger averages 10 minutes.

As messengers return with collected mail, it is placed on sorting tables in the outgoing mail section. Here a girl on one side of the sorting table divides this mail into three groups: Regular mail; company mail and mail for airports along United routes; and the third group consists of mail pertaining to air line traffic and mail going to other air lines.

On the other side of the table girls sort outgoing company mail into boxes. These mail boxes are also arranged for handling groups of mail so the girl can distribute letters by standing in one position. All letters for each branch are placed in one envelope, then put into company mail bags at the end of the sorting table.

The regular mail is taken to a separate section of the mailing department, where it is placed in boxes marked air mail, local, special delivery, registered, foreign. Mail is then weighed and the correct amount of postage set on a Pitney-Bowes meter for each group as it runs through the machine for stamping and sealing.

When the final pick-up for regular mail is made at 3:00 o'clock, a blue slip is left in each basket, which reads: "This sheet in your outgoing basket indicates the final pick-up of outgoing mail has been made for today. Please leave this sheet in your basket to be collected on the following morning." When the final pick-up of air mail has been made for the day at 5:15, a pink sheet is left in each outgoing basket.

Fig. 18.—United Air Lines' outgoing mail section is arranged so workers can distribute letters by remaining in one position.

preparing requisitions for applications to expedite the payment of death claims.

All mail at Prudential is divided into three broad classifications: Envelopes of various sizes and shapes are marked for home office mail, policyholders' mail and field office mail. First morning mail is picked up at the post office at 6:15. This mail is neatly stacked in hampers rather than in bags to facilitate sorting. This early morning mail usually consists of about 38 hampers and is delivered to the home office mailing department for primary sorting and opening by machine at 10 minutes before 7:00 each morning.

By 8:00 A.M. all policyholders' mail not addressed to individuals or specific departments—averaging about 2,500 letters per day—has been opened and sent to the policyholders' mail section for reading and directing to the right departments. Unidentified forms and documents are also sent to this department.

By 8:45 all incoming mail has been sorted according to floors and departments and is then sent to one of the three substations of the main mailing department. At this time messengers begin their scheduled half-hour pick-up and delivery service. Last mail collection of the day is at 3:35 P.M.

When outgoing mail is received in the mailing department it is classified according to home office, field offices and mail going to policyholders. District mail is sorted by divisions of the company organization, using portable Multisorts. All outgoing policyholder mail, which averages 42,000 letters a day, is run through meter machines for imprinting postage and sealing at the rate of 10,000 an hour.

The Addressograph section of the mailing department prepares forms for branch and division offices and automatically prints addresses on checks, envelopes, bulletins and company publications.

Forty-nine different kinds of checks are also prepared for mailing each day by the mailing department and are signed by check signing machine.

Another function of the mailing department is the handling of telegrams. The department uses two Teleprinters for sending telegrams by direct wire to Western Union's New York office and sends and receives more than a thousand telegrams a day.

To prevent unnecessary delays and errors, the department publishes a special list of instructions covering home office, policyholders' and field office mail. The address on mail going to field offices contains only the office designation, district number and state. Employees are kept posted on changes in daily pick-up schedules so the time of outgoing mail to branch offices complies with train schedules. To avoid peak loads, employees are advised to deposit mail regularly during the day.

**Methods of reducing mailing costs.** Since the advance in postage rates that took place a few years ago, increased attention has been given to methods of reducing mailing costs. By no means should it be assumed, therefore, that the entire duty of the mailing

Fig. 20.—Four types of postage indicia.

as well as the envelopes themselves, must be of white or a light tint or shade.

#### BUSINESS REPLY ENVELOPE FORMS

Collect-on-delivery, or business reply envelopes, are allowed. Two permissible forms are shown in Figures 21 and 22.

Concerns with branches or dealers who desire to distribute business reply envelopes from their main office to be returned to various dealers or branches may do so either under permit obtained at each of the offices to which envelopes are to be returned, or under one permit issued at the post office where the main office of the company is located.

Fig. 21.—One Form of Business Reply Envelope.

#### THIRD-CLASS MATTER

Fig. 22.—Another Form of Business Reply Envelope.

Third-class mail is printed matter and other mailable matter weighing eight ounces or less. "Printed matter" includes:

- A. Single copies of straight printed matter (not reproductions of type-written or handwritten matter). The rate is  $1\frac{1}{2}$  cents for each 2 ounces or fraction thereof. Stamps or postage meter machine without date line may be used.

B. Twenty or more copies of printed, multigraphed, mimeographed, or otherwise reproduced circulars, including reproductions of handwriting. The insertion of handwritten, typed, or stamped date and names of addressee and addressor is permitted. The rate is  $1\frac{1}{2}$  cents for each 2 ounces or fraction. Regular or precancelled stamps, postage meter machine, without date line, or printed non-meter indicia may be used.

C. Two hundred or more, or 20 pounds or more, of mail otherwise like (B) may be sent under bulk rate, if the mailer has a permit, and if the mail is sorted and faced for states and for all post offices receiving fifteen or more pieces. The rate is 12 cents per pound, but not less than 1 cent per piece. Precancelled stamps, printed non-meter indicia, or postage meter machine without date line may be used.

D. Books and catalogs of less than twenty-four pages and those having twenty-four pages or over (twenty-two of which are printed) and weighing 8 ounces or less each. The rates for single copies are 1 cent for each 2 ounces or fraction, and 8 cents per pound for 200 or more copies or 20 pounds or more, but not less than 1 cent per piece. The mailer must have a permit, and the mail must be sorted and faced for all states and all post offices receiving fifteen or more pieces. Precancelled stamps, printed non-meter indicia, or postage meter machine without date line may be used.

Merchandise, books and other articles, except circulars and miscellaneous printed matter, if weighing less than 8 ounces, may be sealed if the package carries the printed statement, "Postmaster: This parcel may be opened for postal inspection if necessary," and the return address of the sender is written or printed. The return and forwarding of third-class mail requires postage anew. Return of undeliverable third-class mail may be secured by printing upon the face in connection with the corner card a guarantee of postage payment. The forwarding address of third-class mail may be secured by printing in the lower left-hand corner, "Postmaster: If forwarding to a new address, notify sender on Form 3547, postage for which is guaranteed." Advertisers using Form 3547, however, should avoid annoying prospects who may have changed residence and left a forwarding address, by wording inscription as follows: "Postmaster: In case of removal, do not notify addressee but hold matter and state on Form 3547 amount of forwarding postage required. Forwarding postage and postage for notice guaranteed." If this is not done, the prospect must pay the cost of forwarding postage on delivery—a fruitful source of ill-will.

Other suggestions for reducing mail-handling costs. Aside from savings to be secured through a thorough knowledge of the postal regulations, there are many other ways in which mail-handling costs may be reduced.

1. Segregate outgoing mail for branch offices, plants, and other frequent destinations. Eliminate the practice of using individual envelopes. Send all mail to one destination in one large envelope. Do not fold such mail.

2. Prepare such envelopes in advance either by addressing the proper First and Fourth Class labels with an addressing machine or, if the quantity warrants it, by having the envelopes printed. One or more complete sets can then be provided each day.

3. Analyze, in advance, proposed mailings of printed material. Consider reducing the weight or trimming the size in order to conform to postal regulations. The U. S. Post Office will examine and rule on a sample if there is any doubt.

4. Keep a constant check on all mail which arrives from branches and plants having insufficient postage. Notify the offending sources to check the postal scales and to exercise more care in weighing in order to stop such errors.

5. Give the mail room the authority and responsibility to question any department's apparent misuse of higher postal rates, e.g., air mail, special delivery, and special handling. Such misuse is often due to the lack of knowledge of postal regulations on the part of these departments.

6. Consider the possibility of substituting single and double penny postcards for letters ordinarily used for order acknowledgments, answers to standardized customer inquiries, inquiries to vendors, and so forth.

From the foregoing it should be entirely clear that the organization and operation of a mailing department is by no means a simple task, especially in a large company. Knowledge of a large number of detailed technical postal regulations is essential. Accuracy, thoroughness, and initiative are qualities which every employee of the mailing department must possess. The office manager who allows his mailing department to be manned largely by inexperienced and untrained personnel, on the assumption that "anybody can take care of the mail," makes a serious and costly mistake.

Organization and work of the messenger service. With relatively few exceptions the type and appearance of messengers employed in the average concern, as well as the organization of their activities, is, unfortunately, nothing of which business houses may be proud. Like the mailing department, it is too often thought that anyone can be a messenger and that the messenger department should serve as a training school for all new employees. While it is true that the work which the average messenger performs does not require great ability, it is also true that the first impression that a company makes on visitors is often the result of contact with a member of the messenger department. Consequently, messengers should be selected on the basis of their personal cleanliness and appearance, as well as for their mental and physical ability to do the work. Courtesy, both to company visitors and to other employees, and a sense of responsibility should be emphasized. The

fact that a messenger's position is often merely an entering wedge from which promotion to a better-paying position comes should be constantly impressed on the minds of all messengers. Possibly the old facetious comment about hiring a new messenger boy when the president dies is somewhat farfetched, but it is certainly true that in many cases department heads needing a clerk for a minor position pick a messenger who has made a good impression on them.

These comments regarding the importance of the place that the messenger holds are not made for the purpose of dignifying the messenger's job, but rather to center attention on the attitude which the office manager should take toward the messengers and the department as a whole.

Control of the messenger's work. Regular schedules, close supervision, and very specific instructions comprise the three main points to be borne in mind in organizing and controlling the messenger service. A number of companies find it advantageous to employ a mature man as head of the messenger department, since such a person, provided he has the right type of forceful personality, can better control the work of the boys and their attitude toward their duties than could some less mature and experienced person.

The smooth functioning of the messenger service depends, to a large extent, upon the proper planning of the pick-up and delivery stations and the scheduling of trips to serve these stations. The central control point is generally the mail room and, if the size of the office requires it, several substations are established, each to serve a specified number of floors or departments. The departmental stations are served from these substations, which sort mail arriving at them so that it is ready for the messengers making deliveries to the departments. Each messenger is furnished with a mail bag or a mail cart with compartments to assist him in transporting the mail.

Under this plan of mail delivery, a letter arriving at the mail room is sorted into the proper substation rack, from which a messenger picks it up during a regularly scheduled trip and delivers it to the proper substation. The clerk in charge of the substation receives it and routes it to a messenger, who, using that substation as a base of operations, delivers it to the proper department. As this messenger makes his deliveries, he also picks up mail at each department and brings it to his substation. Mail for his route is sorted and returned to him. Mail for other substations and

for the mail room is sorted and picked up by the messenger operating out of the mail room, who delivers it to the proper points.

Many companies, especially large ones, use a card system for controlling the activities of the messengers. In some cases the messenger notes the exact time of his visit on a card attached to the outgoing mail box in each department. The head of the messenger department, in turn, has a control sheet which shows the time when each messenger left the central station and when he returned. In this way the head messenger may keep in close and constant touch with the activities of each of his messengers during the day.

Control over the promptness and number of trips made by each messenger throughout the day also may be maintained by the use of a series of numbered cards. The cards, which are made of heavy cardboard, give only a number; in other words, no effort is made to print or stamp the time on the individual cards. As each messenger leaves the mailing department he—or she—is given a set of numbers for that particular trip. As collections are made from each box, the card covering that trip number is deposited in the box and the card of the previous trip collected. The cards thus collected are returned to the supervisor of the mailing department at the end of the trip. No cards are issued in advance, nor are any of the messengers allowed to retain cards in their possession.

This system, which is automatic as well as simple, has been found most effective in checking both the promptness of the messengers in their collections, and their care in delivering and collecting at each box on each trip. If, for example, a complaint is made by an executive or employee that no collection has been made from his box for the last few hours, the person receiving the complaint simply asks him to give the number of the collection card then in the box. This number indicates at once the time when the last collection was actually made. If the messenger is behind schedule, or if he has skipped that box on the last trip, this fact is established without question immediately. If, on the other hand, the proper collection card is in the box, it is assumed that the messenger actually did call at the box and did collect whatever material was in it. In the same way, in cases of complaints of failure to collect material alleged to have been in the box, it can be assumed without serious question that if the number of the collection card is correct, the papers were not, as a matter of fact, in the box at the time the collection was made. It is obvious that without some such plan

as this, no basis exists for determining the facts in the case, and that dissatisfaction to all concerned is the result.

Reception and information service. One of the important general services for which the office manager is often responsible is the selection and supervision of reception and information clerks. Many companies have found it desirable to establish the position of reception clerk in their offices to receive visitors. The first impression of an organization on a visitor is gained through the reception clerk. Not only is the reception clerk a guardian of company good will, but she is also a guardian of the time and energy of employees and executives. Considerable time and annoyance, on the part of both the visitor and the organization, is saved by having the visitor directed expeditiously to the proper person in the organization.

Qualifications of a reception clerk. As the desk of the receptionist is the front door of the organization, considerable care should be exercised in selecting applicants for the position. The qualities desired, listed according to the frequency with which they were mentioned by fourteen companies who were queried on this point, were as follows:<sup>4</sup>

1. Pleasing personality	Reserve
Good appearance	Discrimination
Tact	Better than average intelligence
Good educational background	Cordiality
Poise	Patience
Conservative dress	Quiet voice
Businesslike attitude	Refinement
Common sense	Even disposition
Resourcefulness	Natural conversationalist
Dignity	

Standard instructions for information clerks. The following extracts from the manual of instruction issued by a well-known midwestern manufacturing company indicate the variety of matters with which the information clerk must be prepared to deal.<sup>5</sup>

The information desk is the first contact and sometimes the only contact that the outsider has with the company, and it is essential therefore that our visitors receive careful consideration. If some department appears to be careless in the length of time it requires visitors to wait, this should be reported to your superior.

<sup>4</sup> Duties and Qualifications of Reception Clerks, Policyholders Service Bureau, Metropolitan Life Insurance Company.

<sup>5</sup> Ibid.

### SECURING NECESSARY INFORMATION FROM CALLERS

1. Visitors wishing to contact individuals, regardless of purpose, should give their name, company represented, and the nature of their business (if not clear on the business card) before being announced, by telephone.

As a rule when asked, "What company do you represent?" the caller will give it, or he will state the nature of his business, or he will say, "I am a personal friend," or, "I am calling on personal business." Should he tell you the latter, say: "Then Mr. A knows you?" (Many who say they are calling on personal business are not even known to the person whom they wish to see.) Should he then admit that he is not known to the man he wishes to see, ask him if he can give you the nature of the personal business and if not, then ask him if someone has sent or recommended him.

If the caller gives a reason or indicates that he has been recommended by someone to see the person upon whom he is calling, then announce him. When he refuses to give any information, tell him: "I cannot announce you unless I may give Mr. A. some information on what you wish to see him about." Should the caller still refuse, telephone the secretary of Mr. A, telling the facts. Act on the secretary's suggestion.

2. Farmers and dealers, as a rule, do not know whom to see. They will tell you, however, what they want. Announce them to the proper person.

3. Visitors calling on members of the Traffic Department are not announced. You should study the faces of those who call upon the Traffic Department so that you will remember those who may be traffic solicitors and who are to be passed on to the Traffic Department without the regular announcement.

4. Ask for the name and company connection of all men calling on anyone in the Engineering Department. Because of the arrangements made for announcement of visitors to the Engineering Department on the Engineering Floor, you may send such visitors to the Engineering Department after you have listed the caller's name and his company connection.

5. Insurance agents and book and magazine salesmen have often given trouble by slipping into the office and calling on people without being announced. If anyone calls this to your attention, or you see a person attempting to pass into the office, report the matter immediately to your superior. These solicitors should ask to be announced, and after seeing one person they should return to the information desk and ask to be announced to the next person. When you know a man has previously not done this, advise him tactfully of our rule. Should he still violate the rule of going through the office unannounced from desk to desk, report immediately to your superior. The rule is definitely that no one is permitted to call from desk to desk for any reason whatsoever unless given special permission. This is done only on very rare occasions, and even then a guide may be provided.

to the person to whom it is addressed. If a special delivery letter is addressed only to the company, it should be sent to the mailing division by special messenger. Packages addressed to an individual may be accepted. If they are addressed just to the company, they should be sent to the receiving desk.

### FILL-IN WORK

Work may be assigned to the information clerk by her supervisor or his secretary. Work should not be accepted from anyone else, because misunderstandings may arise as to the order in which jobs are to be completed.

### RELIEF CLERK AT THE INFORMATION DESK

The person relieving at the information desk should be as familiar with the work as the regular employee. The hours of relief are:

10:00 to 10:15  
12:15 to 1:15  
3:00 to 3:15

### VISITORS DESIRING TO INSPECT OUR OFFICE AND PLANT

Any person or group wishing to be taken through the office or mill should be referred to the Personnel Department. If the visitor is a dealer or consumer interested in our products, it is advisable to consult with the sales manager (or his secretary) who is concerned. If the sales manager can do so, the visitor will be given special attention.

### DONATIONS

Persons asking for money or product donations should be referred to the Director of Personnel. If the donation requested is some product which is to be used at a church bazaar or similar festivity, the request should be referred to the General Sales Manager of the Cereal Department. No one is permitted to solicit employees for donations of any kind.

### BEGGARS, DRUNKS, ETC.

Visitors of this type may make trouble, hence when they come in one of the nearby men should be called who understands the situation and can handle it properly. In no instance should information clerks make personal donations—all beggars are to be dismissed at once.

### APPLICANTS FOR POSITIONS

Persons applying for work on our sales force or in the office should be referred to the Personnel Department and sent immediately to the Personnel floor, where the Personnel Department information clerk will receive the visitor. If, in the judgment of the information clerk, the applicant is of a type who would not, under any circumstances, be considered for employment, the visitor should be told that we have no work for him and be dismissed courteously.

Telephone service. The provision of adequate telephone service is an extremely important member of the group of service functions for which the office manager is responsible. The proper administration of this function requires an understanding of telephone equipment and its application, the correct methods of switchboard operation and supervision, the importance of good telephone usage throughout the office, and the regulation of the employee's use of the telephone for personal reasons. The importance of an understanding of equipment is illustrated by the experience of American Type Founders, Inc., as related by Mr. Victor J. Olearo, Comptroller:<sup>6</sup>

Before expanding our services we had a two-operator board. All calls went through this board. The two operators worked full time, with a part-time relief operator. We then had only 115 inside extensions. There were 11 trunk lines. These facilities were adequate for our requirements at that time.

Within three months our machine-shop capacity hours increased 50 per cent. Since we had been on full-time day capacity, this increase required overtime and night shifts. It affected all the internal functional services, such as purchasing, receiving, and shipping. We were soon faced with the need to do something about our communications system and to do it quickly, because the system we had at that time was not adequate for the increased requirements. There was no sign at that time of any early abatement of our needs; rather, the prospect pointed to a continued expansion of our requirements.

Investigation of the situation indicated that there were four principal courses open to us:

*First:* We could add another section to our two-board equipment. This would require relocation of the existing facilities and rearrangement of the reception desk. This additional section would put our installation in the bracket requiring a five-year contract.

*Second:* We could add a separate board for the munitions plant. We would need an additional operator and, what was more important, we would have to set up a separate central number. That meant that we would require a series of tie lines from the main plant to the munitions plant, to take care of calls which would come through the main plant but were intended for the new plant. The telephone listing of the American Type Founders made no distinction between its manufacturing departments; and, as the listing of the new plant would not be made public soon enough, a great many misdirected calls intended for that plant would have to be shuttled over.

*Third:* We could install a so-called PBX system, which permits the direct dialing of intra-plant calls. This would require a complete change-

<sup>6</sup> Olearo, V. J., "Expanding Communication Service," *Office Management Series* No. 96, American Management Association, 1941, p. 45.

over of the system. However, this system would need only a two-board arrangement and two operators. It required a five-year contract as did the first course.

*Fourth:* We could install a private system which would be parallel with our own. We soon discarded this idea because it would necessitate the outright purchase of equipment and also would mean having two telephones on desks where we now have one. To have two or three phones ringing at the same time and not know which is which is confusing and inefficient.

Cost was an important consideration. While we wanted to provide an adequate system, we also wished to avoid increased costs. We estimated that the first course (adding an extra board) and the second course (adding the separate switchboard at the new plant) would cost at that time about \$100 more than changing over our existing system to the inside PBX dial system. The cost of the private system was prohibitive. We therefore decided in favor of the PBX arrangement.

It took about three months to change over to this system. We had to provide a space for the installation of the power plant required. The cost of this installation was not great when spread over the five-year period. It will average out something like \$8 a month.

With this new system we are now operating 200 intra-plant extensions as against 115 extensions a year ago. We are handling 15 trunk lines, against 11 a year ago. We have two operators, and no additional relief operator is necessary. With any one of the alternative systems we would now be employing four or five full-time operators.

The office manager often must solve such problems of communication, and a knowledge of telephone equipment available, from switchboard arrangements down to instrument combinations, permits him to suggest solutions to the problems of other departments. The local telephone company office will provide any necessary engineering advice, free of charge.

An understanding of the methods of switchboard operation and supervision is helpful so that he might control, through the supervisor, the work of the telephone operators. Many large companies issue manuals of instruction to the telephone operators, thus assuring that the fundamentals of courteous, efficient service are observed. In addition, the telephone company will, at the request of the office manager, monitor the switchboard periodically and report to him and to the supervisor of operators the results of its study of switchboard practices. Such reports are helpful in the training of operators. In addition, they point out bad practices in telephone usage throughout the organization and indicate where the office manager should educate the clerical help in this respect.

**Employees' personal telephone calls.** The problem of handling

employees' personal calls is always a difficult one. Some companies are strict, while others are lenient. In a number of large concerns subordinate employees are not permitted to be called to the telephone on personal matters during office hours, except on special occasions. Other companies have no such hard-and-fast rule, but leave the matter to the discretion and regulation of the individual department head. It would seem, especially in the case of outgoing calls and other calls for which the company is charged, that some restriction should be imposed. This is especially true if the telephone company is willing to provide pay telephone booths at convenient locations in the building. In practice, of course, no regulation in respect to this matter can ever be fully enforced, since employees have ways whereby personal or social matters may be made to appear as necessary emergencies. The plan whereby employees are allowed to use the regular telephone service for personal calls, but for which they pay, telling the operator whether the call is personal or business, has much to commend it.

The Office Management Association of Chicago made a survey of the use and abuse of the telephone.<sup>7</sup> The following information is of interest:

In 33 offices, company telephones may be used for other than business calls. Of these, 12 companies provide pay telephones for employees' personal use, while 21 do not. Ten restrict company telephones to business calls, while two offices did not reply to this question. Of the 10 companies not permitting personal calls on company telephones, 8 provide pay telephones for their employees and 2 do not.

Twenty-eight of the 45 reporting offices impose limitations on the use of telephones for long distance calls. Nine require written approvals for making such calls, and 1 requires verbal approval.

Duplicating services. One of the important functions of the office service department in many companies consists of performing duplicating service for the entire organization. Duplicating methods and the more usual kinds of equipment used have been described in Chapter 6. The organization of the activity and the control of production are not unlike the methods previously outlined in connection with stenographic service in Chapter 8.

<sup>7</sup> "Company Telephone Policy," *The Management Review*, American Management Association, April, 1945, p. 129.

The office manager should receive daily reports showing the amount of work received, amount completed, amount remaining on hand with requested date of completion for each job, department for which work was done, and any other data that the practical requirements of the situation may show to be important.

One problem which arises in connection with duplicating work concerns the demands sometimes made on the department for rush service. There are occasions, of course, on which the promptest possible service is needed and must be given. It has been the author's experience, however, that the "special rush" requests are not infrequently directly traceable to poor planning and organization of the job by the department in which it originated. One practical method that has been found useful in reducing unnecessary rush work is for the office manager to see that all departments are thoroughly familiar with the production time required for all kinds of jobs which the duplicating department ordinarily handles. The time required to do mimeograph work, for example, depends on the number of stencils to be cut and the number of copies of each which are to be run. Standard time allowances for jobs of various kinds should be prepared, and no work that specifies delivery in a shorter time should be accepted without the personal approval of the office manager.

Stationery and office-supply stock room. The storage and issuance of office supplies is one of the service duties of the office manager that does not always receive the consideration it deserves. Too often confusion and disorder, rather than order and neatness, typify the stationery stock room.

In the first place, a definite space should be set aside for the storage of office supplies. This space should be enclosed on all sides and entrance to it should be through a door to which, incidentally, there should be not too many keys. The space selected for the storage room should be that which is the least desirable for clerical work from the standpoint of natural light and ventilation. At the same time the location must be fairly central and convenient.

In the small office there is usually one stock room, while in larger offices departmental stock rooms are sometimes provided. The amount of space needed depends largely upon the policy followed by the particular company in buying supplies. The tendency is very distinctly in the direction of more frequent purchases of a smaller number of units per order. Care, however, must be

makes the proper new entry in the line below. In this way one may ascertain at a glance the amount on hand at any given time.

It is to be noted, however, that the use of the bin-tag plan does not give as full and complete information as does the stock record. One cannot tell by looking at the tag, for example, whether more supplies have been ordered, nor to whom or to what department the supplies have been issued. Moreover, the use of a stock record makes it easy for anyone who is unfamiliar with the location of the supplies in the stock room to find the items by simply referring to aisle and bin number given on the heading of the stock record.

Still another plan which is sometimes used, not so much for keeping a record of amounts on hand as for the purpose of being certain that the stock clerk notifies the purchasing department when the supply on hand of any given item is running low, is to tie a tag on a package—which, of course, is to be used last—so that it necessarily will come to the attention of the stock clerk when it is being opened. On the tag are printed instructions, such as, "Before opening, notify the purchasing department that the order point has been reached on this article." If desired, this tag may have the name and symbol number of the item written on it. In this case the supply clerk need only tear the tag off and send it to the purchasing department.

Issuance of office supplies. In practically all well-managed offices only designated persons are allowed to enter the office-supply stock rooms. The establishment of a rule of this kind not only avoids the temptation of the office employee to take a greater quantity of supplies than the requisition calls for, but makes it possible more definitely to place the responsibility for inventory shortages, appearance of the stock room, and so on.

In some offices the practice is to have each employee who requires office supplies of any nature fill out a requisition for what is needed and give it to his immediate superior. These individual requisitions are periodically accumulated and filled, and the supplies given to the individuals requesting them. In some cases, particularly where the organization is large enough to justify the existence of a sub-supply room in each main department, requisitions are filled every day. In this case, however, the departmental supply room carries only the more usual items, such as stationery, pencils, pens, erasers, clips, and so on. This supply, in turn, is replenished periodically from the general supply room.

Various attempts have been made to work out a practical plan

whereby the amount of supplies issued to any one clerk may be definitely controlled. Some companies, for example, have invested in mechanical pencils for all office employees. A stock of lead fillers is kept on hand. Each clerk is told that she will be held responsible for the pencil. Another company requires every stenographer to show her old notebook before being allowed to draw another. Still another company allows each clerk six pencils and one ink eraser a year. Frankly, the writer is not in entire sympathy with such methods. Theoretically it may be possible to save something in office supplies by the adoption of such strict methods of control. On the other hand, observation, experience, and faith in human nature indicate that a great majority of office employees are honest and not intentionally wasteful. Perfection is not attainable under any circumstances, and it is seriously to be questioned whether a method of issuing office supplies that suggests too economical a policy does not do more harm than good.

The use of obsolete paper and forms. In every organization there is a certain amount of mimeographed, multigraphed, or printed matter which, for one reason or another, is no longer of value. A number of concerns cut this up into convenient sizes and make pads of scrap paper out of it. Regular printed memo pads are necessary for certain classes of work, but there are countless occasions when just a piece of paper of any kind is needed for making a notation or doing a bit of figuring. For such purposes the back of the obsolete multigraphed questionnaire or form letter, made up in blocks or pads, is quite good enough. A saving such as this may seem small, and it is, if one is considering only a single pad. In the aggregate, throughout the year, however, the smaller number of regular memo pads used will more than offset the small cost of making up the scrap pads.

Inventory of office furniture and equipment. In the small and medium sized company the control and disposition of office furniture and equipment is not a matter of great importance. Purchases are made infrequently, and the number of pieces on hand is not so large as to require a numbering and inventory system.

In large organizations, however, the control and disposition of furniture and equipment is usually one of the responsibilities of the general service section. In such cases the common practice is to number each piece and maintain a complete and detailed record of its location. Whenever furniture or equipment is moved, the necessary changes are made in the records. When purchases of

additional equipment are requested, a check is first made to determine whether the required piece is available somewhere in the company, either in a department or in the furniture stock room. By maintaining complete records, it is often possible to supply the needed equipment without purchasing it. Such a plan is but another example of the many ways in which the progressive office manager can effect economies for his company, thereby helping to establish more firmly in the minds of the chief executives the fact that the office is a productive department.

## *Office Management in the Order Department*

In the preceding chapters attention has been centered largely on the physical and service factors of office management, including the selection and layout of the office, equipment, appliances, and the filing, stenographic, and general services. All these activities are an essential part of office management. Together they comprise a group of responsibilities to which the office manager necessarily devotes a considerable share of his time. In an increasing number of cases, however, the office manager, in addition to his service responsibilities, is concerned in his functional capacity as supervisor of office methods with the office work of the business and operating departments. For this reason, this and the next four chapters are devoted to a discussion of the office work of those departments that are common to all kinds of business. In each case the principles and basic methods of operation are first stated briefly; then the methods and procedures used by a number of representative companies are described.

form its function before other sections can do their part. Time lost in the order department can result only in delay on the part of all departments whose work is to follow. Moreover, mistakes made at this first operation—translation of customers' orders into operating instructions—are unlikely to be noticed until after the completion of the job, with resulting complaints and difficulties. Time and accuracy are therefore essential characteristics of a sound order procedure.

More specifically, "an efficient order system should furnish a record of the purchaser's name and address and give complete shipping instructions. It must furnish a sufficient number of copies for each department interested in the transaction. It must expedite the posting of an order to the purchaser's account. It must necessitate as few written additions as possible, and a minimum of clerical help. It must also take care of the preparation of invoices and the writing of labels, tags, or other shipping materials, and it should furnish records for the statistical and production departments."<sup>1</sup>

Order department routine. The exact sequence of operations in a specific order department will depend upon a number of factors, all of which may vary between one company and another, depending upon the nature of the business. Most of the following steps are common to all order department routines:

Order is received and interpreted. Customers' orders arrive in each delivery of incoming mail and, after being opened by the mail room, are delivered to the sales department. They are routed to the proper product division and are reviewed carefully to make certain that all the information needed to prepare a house order form is included. In some cases descriptions of articles are enlarged, stock numbers of products are added, if missing, prices and price change clauses are checked, and terms and conditions are noted. If any doubt exists as to precisely what the customer wants, his order is generally routed back to the salesman or a representative who will question the customer to make certain what is wanted.

Credit is approved. In some companies this function is performed prior to interpreting the customer's order, in which case all incoming orders are routed through the credit department before delivery to the sales department. This is generally true when products are standard and there is seldom any doubt about quantities and prices as the customer lists them. In most cases, however,

<sup>1</sup> The Dartnell Corporation, Report No. 298.

In many business concerns, the problem of back orders, which comprise items the company was unable to ship because they were out of stock when the original order was received, is very important. There are various methods for handling back order procedure, one of which is discussed in the illustration following this discussion.

Invoicing. Billing the customer for the material shipped involves the pricing of the item shipped, the extension of this pricing (the multiplication of the quantity and the unit price), the totaling of the amount of the order, and the addition of any extras, such as shipping charges, normal trade extras, and so forth, which may be involved.

As explained previously, quite often the order is priced, extended, and the total amount, including extras, calculated at the time the order is originally written. This is done, when possible, so that it will not be necessary to rewrite the entire transaction in order to produce an invoice. The invoice is merely an additional copy of the order and is held in a pending file until such time as the shipping department notifies the invoicing unit that the order has been shipped to the customer. When this occurs, the invoice is pulled from the file, mailed, and the necessary accounting records made.

In those cases where the customer's invoice is not a copy of the original order, the invoice is prepared upon receipt of the copy of the order from the shipping department. The order is priced, the extensions made and checked, after which the completed invoice is checked for accuracy. As before, the customer's copy is mailed to him and the proper accounting records are then created.

The ordering and invoicing procedure presents an opportunity for a great deal of study and refinement. It is a process in which many of the basic elements of office management are present. Moreover, it generally is a highly repetitive procedure in which units of work can be measured quite accurately. Consequently, this operation can be planned, scheduled, and controlled within rather close limits. Unit costs for the operation can be calculated, and quite often worthwhile savings can be made. A wide variety of machines and systems applicable to the order and billing procedure are available. The main purpose of them all is to do this job more quickly, so that the customer may receive the fastest possible service; more accurately, so that the customer's service will be of the highest quality; and more economically, so that the

office costs in connection with the distribution of the product may be reduced to a minimum.

Order and invoicing procedure of a manufacturing company. The order and invoicing procedure of the service department of The Timken-Detroit Axle Company is an illustration of a well-planned order system.<sup>2</sup>

The Timken-Detroit Axle Company manufactures most of its own parts and buys others from various vendors. The service department handles nearly 20,000 individual items and parts are brought in and shipped every hour of the day. When a shipping order is sent to the material clerks and they find a given part on the order is not available at the moment, that part is immediately back ordered.

An hour or so later, a quantity of the part may be received and the back order filled. In such case, there is no actual delay in shipping and the customer doesn't even know the part was back ordered. But the procedure in the service department is the same as if the delay had been one of weeks or even months.

On the other hand, a quantity of that part might not be received for a long while, and orders for it would accumulate. When a quantity is received, it might not be sufficient to fill all customers' back orders. When this occurs the quantity should, of course, be allocated equitably.

When customers' purchase orders are received, they are assigned shipper numbers and sent to a master control file. In this department specifications, prices, extensions, and any other information which may be necessary before typing are added.

They are passed on to the typing department where a group of typists, using electric typewriters equipped with Hectowriters, type a Ditto master copy of each order.

The master copies are checked for accuracy and passed across an aisle to a battery of Ditto duplicators. These duplicators are equipped with adjustable tables for reproducing all or any part of the information on the masters. Here, all shipping copies and all invoice copies—a total of nine—are first duplicated. Then the operator masks all except the shipping directions on the master copy and runs the shipping and billing tickets.

A customer's purchase order usually lists 1 to 40 or more items, but a separate set of tickets is run for each item. There are four tickets, of different colors, in each set: An identification ticket (white); packing ticket (yellow); shipping ticket (pink); and back-order ticket (blue). Each set of tickets is clipped together and sorted in sequence by part numbers.

Copies of the full order are sorted and the shipping tickets sent to a

---

<sup>2</sup> French, R. G., "Down Goes Order Processing Cost," *American Business*, May, 1946, p. 12

checking desk for verification. The accounting department's other copies are forwarded to it and are filed by shipper number to await notice of shipment.

Materials record clerks fill in on each ticket the number of pieces to be shipped and the stock location of each part. If the records show that none, or an insufficient quantity, of a given item listed is available at the moment, the blue (back-order) card is posted and placed in a back-order file. Other tickets remain in the file until the bookkeeping machine operators have posted the records.

Shipping tickets are then sent to a file where clerks in the billing department sort them by customers and order numbers. They pull the master copy, the accounting department shipping copy and the order department copy and enter on the copies the quantity of pieces to be shipped, and date the orders to show the day on which tickets were sent to the stockrooms. These orders are placed in an open billing file to await receipt of shipping information.

If there is more than one item on a shipper, as is usually the case, tickets are numbered to indicate the number and sequence of tickets—i.e., 1 of 5, 2 of 5, etc.

All tickets then are sent to the stockrooms where they are put in cellophane envelopes to keep them clean. Stockroom employees assemble the items. Tickets are arranged in the same order as the bins in the stockrooms, so attendants have only to collect the items in the order indicated. They attach the identification cards to the parts and the packing tickets are placed in the boxes. The parts then are sent to the shipping room. The shipping clerks check them and fill out the shipping ticket, entering the weight, bill of lading number, routing, date shipped, etc., and return it to the service department.

On receipt of the shipping ticket properly filled in, the service department transcribes the shipping information on the accounting department's shipping copy and on the order department's copy of the full order and forwards the accounting department's copy to it. The latter department pulls its invoice copies, fills in the shipping information and bills the customer. Meanwhile, the order department copy is similarly filled in and sent to a service file where it is matched with the customer's original purchase order and filed as a permanent record.

Under the former system, when a back order was necessary, the master copy of the full order had to be retyped entirely and duplicated, as described above. Under the present procedure, a "variable master" strip, 2 inches wide, is placed on the left-hand margin of the original master copy. The original shipper number, date back ordered, and the new shipper number are typed on it through a Ditto carbon. Copies are duplicated as before, but no new tickets are required. The back order is held until the next shipment to that customer, when it is pulled and included with the new order. Using this variable master strip effects a major saving of time in typing masters.

As quantities of parts on back order are received, the back orders are

pulled and filled. If the quantity is insufficient to fill all back orders, the available supply is equitably allocated among all customers who have been waiting for the parts.

While the greatest advantage of this system probably is in handling of back orders, the procedure also has other advantages. The most important of these is that tickets are duplicated and held until they are ready to accumulate all stock available for the shipment. Thus, tickets, rather than stock, are accumulated.

Shipments usually are made to designated customers on certain days of the week. All of the stock is accumulated at that time, instead of being accumulated and stored a little at a time. Then too, it is desirable to attach a separate identification ticket to each part and to furnish a separate packing ticket for each part in a box. This plan provides the necessary tickets.

At the time the present parts order control system was installed, new duplicating equipment was also acquired to replace the gelatin type duplicators formerly used. As a result of the two improvements, cost of order processing was cut approximately 50 per cent.

More important, management insists, is the better service it is able to render customers.

Speedy service to customers is an important factor in good customer relations. The above plan, it should be noted, stresses this service feature, in addition to accuracy, the elimination of double and triple writing of the same information, and the lowering of the cost of order and billing work.

Billing procedure at Grove Laboratories, Inc. The following example serves to show how good order and billing procedure affects the operation of other functions of a business, in addition to reducing order costs and speeding up service.<sup>3</sup>

The accounting system at Grove Laboratories, Inc. was designed to handle all billing and to segregate product sales by territories and marketing areas. The time saved on these operations was approximately 62½ per cent. Broken down to separate operations the savings are:

1. Fifteen man-hours saved daily in billing, which has reduced overtime in that department.
2. Tabulating daily sales distribution, savings of more than 70 per cent.
3. Keeping records of future orders, savings of more than 90 per cent.

Since its adoption there is a noticeable improvement in office efficiency. Operations in the general filing department have been speeded up considerably. The credit department finds it can give better service in checking orders, which shows how the system reflects efficiency to other departments, although not directly connected with them.

<sup>3</sup> Lawson, A. T., "Billing and Sales Analysis." *American Business*, August, 1945, p. 14.

An index of customers is maintained by trade classifications. One tabulating card is punched to show the customer name, another his street address, and one for his city and state. The customer name card contains his code number, salesman's territory number and the marketing area number. These three cards as well as all product cards show the same punch operations from column 61 to the extreme right. The small columns are for punching all fixed data concerning an individual account, making it possible to check any information desired. Product cards need no other customer identification than the punched code number. The punched slots at the upper left of product cards identify customer and all other needed information. If, by error, product cards should become mixed with those of other customers the whole lot can be placed in the assorting machine, set for any code number desired, and they are separated automatically.

Files of product cards show an assortment of quantities ranging from  $\frac{1}{12}$  dozen to 1,200 dozen. If any quantity card in excess of 1,200 dozen is required, a combination of cards is pulled. On receipt of an order, the particular name, street and city cards are pulled along with the required product cards for the quantities specified in the order. After cards are pulled and verified for accuracy, the complete order is placed in the printing machine for invoicing.

All coded information in the customer name card is transferred automatically by gang punch operation, through the use of a reproducer unit, directly into the product cards. These completed product cards then become a source of statistical break-down for all vital information required in making a quick analysis. Here the sales department can find the answer to a selling problem for any individual account or for any given territory within a few minutes. These completed product cards are used in keeping an accurate control over advertising expenditures and to direct special effort to any part of the country on any product which needs special sales effort.

Should it be desired to learn how B complex Vitamins are selling in certain types of stores in Cook County, a card run is made on that particular class on all 037's in that area. The complete picture is ready for action in a few minutes.

Under the old system, billing operations required two full-time operators of 8 hours each, plus overtime at certain periods. Now customer invoicing requires only a 3-hour period, thus leaving the battery equipment open 5 hours for statistical runs and other punch card performances. At the same time and within this 3-hour period about 25 per cent more orders can be billed than formerly.

Five girls were formerly employed in the distribution of product sales and accumulation of sales data by marketing areas, city and state allocations, etc. This made a total of seven persons required to handle these operations and those in the billing department. Now the man in charge assisted by four girls does all this work.

The company always used a daily accumulation of sales to ascertain its sales position compared to a year ago to reflect increase or decrease.

To obtain this information under the manual method required 3 hours daily for one clerk to complete the tabulation. Now the job is done in 45 minutes, saving about 70 per cent in time.

Stock control was one phase of the business that used to cause a lot of trouble. There was always a lag of several days in keeping accurate check on the movement of goods. It often occurred that the last check showed a stock of several thousand dozen of an item on hand. But checks were not always current and before it could be counted again, the stock would be depleted and filling orders would have to be delayed until the item was restocked. By making a run of product cards for any item of shipped goods during any past specified period of days, the inventory can be determined within an hour or two. Then the daily movement record of finished goods yields a closer control over stock at the main plant and in the warehouses.

Keeping complete control of large quantities of future orders and the many products ordered was a difficult problem since new orders were added from day to day and others were shipped. With the method of punch cards a current file for such futures with punched cards is maintained. As shipments are made, the cards are removed and it is very easy to make a card run for various products to determine the quantities of each to be shipped over the future order period. In some cases, future orders are scheduled for shipment three or four months ahead.

It formerly took the full time of one clerk in the credit department to keep these future records. Today, a complete check on the future status can be had in 30 minutes to a maximum of 3 hours, depending on the quantity of orders in file. It should be noted here that these future card runs are not made regularly under this system, but only when it is deemed necessary. This application of the system means that on this one operation the company saves more than 90 per cent of the time formerly required.

This factor of control is greatly simplified in that each operation upon completion can be rechecked for accuracy and tied into control figures.

A double check is kept on back orders which carry the same number as that used on the original invoice. This number is printed on the invoice when the back order is billed so as to give a cross reference. Now that stock control is kept up to date the number of back orders has been reduced, which not only permits better service to customers but saves labor.

The company uses a quadruplicate invoice: (1) Customer copy; (2) shipping department copy—on the reverse side of this sheet is listed all information pertaining to shipment, such as number of cases, B/L data, routing, etc.; (3) accounting department copy; (4) transportation—on this sheet is kept a record of shipping procedure, such as freight expenses, etc., in a loose-leaf file.

**Order department procedure in a mail-order house.** The following paragraphs describe the methods of handling orders in a large mail-order company.

All incoming mail is sent directly to the in-mail department. Letters are opened by an ordinary letter-opening machine which, in addition, stamps each letter with the date and the mail number. Each delivery is given a number. The letters are then marked—for example, 1-2-47-2, which means the second mail received on January 2, 1947. Along the entire side of the mail room is a sorting board, which is low enough so that the girls can sit down on stools of ordinary height while at work. In the middle of this table-like arrangement there are two rubber belt conveyors, one about eight inches above the other. Since this conveyor system is in the center of the sorting board, the girls can work on each side of it.

The orders are sent through in accordance with a carefully planned schedule, which, however, varies with the number of orders received. In the sorting of the mail, the orders are sorted out and put on the upper of the two conveyors, while all other correspondence is put on the lower one. The orders go along the conveyor to the end of the sorting board to a table. At the sorting board the orders are pinned on order forms, on each of which is a number. At the table the orders are marked with the amounts, after which they are checked and added. The cashier's department takes care of all money orders and checks, as well as currency.

The orders next reach the stenciling department. This department has two main divisions. The first consists of the files, containing a stencil for every person who has ever ordered from the firm previously, and the other is a group of stenciling machines on which stencils for all new customers are made. A record is kept for each individual customer, and all his transactions and other relations with the company are recorded. These files are arranged alphabetically as well as by states and localities, and contain approximately two and one-half million stencils. The order form is stenciled, as is the gummed label which is to go on the package.

From the stencil department the orders go to the order-typing department. In this department the order is typed on a duplicate form. If more than one item is ordered, a separate sheet is typed for each one. On this sheet appears the history of the order. M 10:20 A 12, for example, means that the order is scheduled to leave Monday at 10:20, and that it is to go to section A, in the assembly department, and to bin 12. The order form goes to the bin, so that when the time comes to send the order out the items may be checked against the order to see that it is complete. The

individual item sheets are sent through pneumatic tubes to the departments for which they are intended. All orders are scheduled to leave the house within twenty-four hours after they are received.

The orders next go down to a desk in each stock room or merchandise floor, as it is called, where the clerk goes to the shelves and selects the article called for by the order sheet. The clerk puts the article along with the order sheet on a table on one side of the room. Another clerk then takes the various articles and sends them down a large chute which connects the merchandise floors with the assembly floor. On a platform just above the assembly floor the articles are sorted into sections. Sections A, B, C, and so on, are for combination orders, and another section for single orders. The sections are further subdivided by ten-minute periods and by hours. The orders are then sorted into these ten-minute periods according to the time schedule stamped on them. When the articles come to the various sections from the sorters on the platform, they are dropped into the appropriate hopper. At the bottom of the hoppers is a long sorting board. Here each article is put into its individual bin. Before the merchandise is shipped, it is checked with the order, which has also been put into the bin. If the check shows the order to be complete, it is wrapped up and the gummed, stenciled label is stuck on. The orders then are sent to the shipping room, in which is a substation of the U. S. Post Office. The orders are put into regular mail sacks, and they go out in this form.

Analyzing the work of the order department. The foregoing illustrations indicate the many possibilities for service which exist in good order-handling procedure. The advantages described were achieved only after a great deal of study and planning on the part of each of the companies mentioned. The following check list will suggest some of the points to be questioned when existing order routines are to be examined, and on the basis of the facts uncovered by the examination improvements will suggest themselves.<sup>4</sup>

How many clerical operations are used in recording, filling and billing each order?

Are there standard instructions that explain, in detail, the proper way to prepare and handle orders and are these instructions used by the employees?

How are peak loads handled?

<sup>4</sup> Pierce, J. F., "Is Your Order Department Ready for Business?" *The Office*, March, 1946, p. 50.

What percentage of orders are received by mail? by telephone? from salesmen? from other sources?

Are order writers assigned to other duties?

Are orders proofread before leaving the order department?

Is any part of the order recopied?

What are the types of orders received?

Where do delays occur in handling orders?

Does the work pile up when a clerk is absent?

Are unnecessary copies of the order being written?

How many times is the same information written on the order, on the shipping forms and on the invoice?

What do the salesmen think of the present order-writing system?

What do customers think when they receive acknowledgment of their order and the invoice?

What writing method best meets the needs? (Single sheets or padded forms? Pads with interleaved carbon? Continuous multi-copy forms with interleaved carbon? Duplicating machine-stencil, spirit, gelatine, offset, or photocopy process?) The method of writing an order determines the answers to many questions. Each order-writing procedure must be studied and analyzed before the proper machine can be selected.

Important factors that are present in every well planned and well executed order-writing system are: accuracy in transcribing all information to all forms needed to complete the transaction; accuracy in reading the information; accuracy in preparing the items for shipment; accuracy in shipping the items.

To improve an order-writing system every copy of the order must be legible. Whenever possible, reduce the number of forms and thereby reduce the number of re-writings of repetitive information. Use the most efficient order-writing method. Have the forms properly designed. Allow the minimum time for routing the forms through all departments. Keep adequate records which show how much it costs to handle and invoice an order and the time required to complete the entire transaction.

# 11

## *Office Management in the Sales Department*

The main objective of the sales department is the marketing of the company's product at a price which will permit a profit and in the quantities necessary to assure steady, high-level production at low unit costs. The fulfillment of this objective requires attention to at least two functions: the creation of demand and the direction and control of the sales force. The following chapter will deal with the former function. Our present concern is with the role of office management in the direction and control of the efforts of the salesmen. Lowered margins of profit, increased competition, and other equally important developments have made it essential that the most careful attention be given to the development of efficient methods of sales management.

Reliance of the sales department upon records and reports. Records and reports constitute the primary means whereby the sales manager and the sales department at the home office keep in touch with salesmen and customers. The sales manager, through a system of daily, weekly, and monthly reports sent to him by his representatives in the field, exercises control and renders decisions almost entirely by means of these documents. In fact, so easy is it to manage the sales force in this way that there is a very real danger of its being carried too far. Of necessity, however, the sales manager depends to a considerable extent upon reports of others for his information about conditions in the sales field.

Organization of the sales department. Lack of space prevents more than brief reference being made to ways in which sales activities may be organized. All firms take into consideration, to a considerable extent, the geographical division of the sales territory. Some have district sales managers, each of whom is in charge of a specified territory and all of whom usually report directly to the sales manager. Other concerns, in addition to the geographical basis of exercising sales control, emphasize the various items or

products in the line through the designation of certain individuals as product managers. Each of the product managers devotes his entire time to developing the sale of his particular product, no matter in what geographical area it may be sold. Still other companies establish selling agencies in different parts of the country and appoint local agents as their direct representatives. In addition to these methods, there is the type of organization commonly used in the retail business and to a considerable extent also in the wholesale field, in which the buying and selling functions are combined and referred to as merchandising.

Obviously the exact nature of the sales records and reports needed depends to a considerable extent upon the kind of sales-organization structure under which the company is operating. In practically all cases, however, there are certain fundamental records which it is absolutely essential to keep.

**Prospect records.** Two important functions of the sales department are to supply leads to salesmen and to see that prospects are properly followed up. The essentials of a practical prospect-file and follow-up system are that the plan work automatically and that it provide for a definite check on results.

One method is to make a lead slip in duplicate for each inquiry received, whether by mail or telephone. One copy is sent to the salesman, the other is kept for the company's prospect files. This slip should contain such information as:

1. Name of customer or prospect.
2. Inquirer's name, initials, and title.
3. Full address.
4. Date inquiry was received.
5. Nature of the company's business.
6. Origin of contact (mail, telephone, visit, and so on).
7. What did the inquirer want to know?

The salesman uses his copy of the lead slip to plan his call and develop the sale. The sales department's copy is placed in a follow-up file, which will bring it to the attention of the sales manager should the salesman fail to follow the prospect or fail to report his progress. A lead slip is illustrated in Figure 31.

**Salesmen's reports.** One of the primary interests of every sales manager is the amount of business which his representatives in the field are securing. Consequently, one of the fundamental

records of the sales department is the salesman's report, which shows specifically and in detail just what each salesman is doing. Practice varies as to the particular method of securing this information from the salesmen. Some companies require a daily report from each salesman containing the names of customers and prospects visited, the results secured, and so on. Other concerns ask that this same information be submitted weekly rather than daily. Still other firms supply their salesmen with customers' record cards, one card for each customer, and ask that the salesmen note the results of their visits on these cards and send them to the office as the calls are made. In other cases the daily or weekly expenses of the salesmen are shown in designated columns on the same form on which the reports of calls are entered. The items commonly found on salesmen's reports are:

1. Name of customer or prospect.
2. Buyer's name, initials and title.
3. Full address.
4. Date of call.
5. Consumption capacity.
6. Competitive conditions.
7. Basis of competition.
8. Price quoted.
9. Orders.
10. Suggested follow-up.
11. When next call should be made.

Whatever details the report may contain, the primary object of the salesmen's reports is to give the sales manager a specific and rather detailed report on each customer or prospect. Ample space should be left for the insertion of any information about the customer's or prospect's present or future business or plans that will be of practical usefulness to the sales department. Under this heading might be such a notation as, "Does not need any more office equipment now but is planning to open a branch office at Albany, N. Y., about April 1, and will be in the market for a complete set of furnishings for it sometime during the first part of March."

Customer's record card. The sales manager must know at all times how much business his firm is doing with each customer. For this reason he keeps in the sales office a customer's record card, a separate card, of course, being maintained for each customer,

Fig. 23.—Customer's Record Card

**Statistical records of sales.** Complete, accurate, and up-to-date customers' record cards also serve as the basis upon which sales statistics are compiled. While it is not within the scope of this chapter to enter into an extended discussion of the use and value of sales statistics, it is in order at least to draw attention to the very great usefulness and practical value which the compilation of such data may have for a progressive sales manager. Classification of sales by items or products sold, by salesmen, by territories, by customers, and so on, will frequently show results that are truly surprising. For example, in an investigation of one company that made use of information secured from customer record cards in this way, an analysis of some 8,000 cards showed that approximately one-third of the customers bought in excess of \$100 worth of merchandise; one-third, from \$25 to \$100 worth; and one-third, less than \$25 worth in the course of a year. Tabulation of these same cards by the amount of sales, however, showed that over 95 per cent of the sales made were to customers who bought over \$100 worth of goods per year. Further study along this same line brought out the fact that, although only 6 per cent of the customers bought more than \$1,000 worth of goods yearly, nevertheless, this 6 per cent bought 85 per cent of all goods sold. The value of such information in planning sales campaigns and in systematizing efforts to reduce selling expenses by concentrating on the most profitable customers is obvious. Every sales manager should regard sales statistics, not as an evil to be avoided if possible, or at most to be put up with grudgingly, but rather as a means by which much valuable information may be secured.

Sales records used by Majestic Manufacturing Company.<sup>1</sup> The following example illustrates one method of maintaining sales records of customers' activity, salesmen's activity, and salesmen's expenses.

Majestic Manufacturing Company, St. Louis, maker of stoves and ranges, has installed a simple set of records that present a visual analytic picture of all sales activities. The new system was installed January 1, 1945, and the following results have been achieved:

1. Time of keeping records cut in half;
2. The handling of orders was speeded up;
3. Progress of customers may be seen at a glance;
4. A visible picture is given of each salesman's activities—his progress, his aggressiveness in conjunction with his training;
5. Cut in cost of distribution as results from salesman's training;
6. A noticeable improvement of the morale and efficiency of the office workers.

The complete set consists of one 4 by 8-inch "fold-over" sheet for the customer record, three 5 by 8-inch cards for salesman's records, and one 5 by 8-inch card showing activities of customer and salesman. All are reversible, providing space for several years' records. Figure 24 illustrates two of these records.

*Customer record.* Records are kept geographically by state. They are slipped into place alphabetically and fastened on a horizontal slide that fits a visible panel. The name of each account appears on the visible index at the bottom of the card. This record sheet is 4 by 8 inches, folded in the center and is reversible, providing four pages for records. These sheets are called "fold-over," because they fit over the salesman's activity card. They are thin, permitting as many as six to be used over the salesman's card before transferring them to dead files. On the salesman's card and flush with the customer fold-over sheet is space for information concerning quota of the different style ranges such as coal and wood, etc. There is a salesman's activity card for each account, which shows everything he did on each call, to afford a quick, fingertip checking of sales progress.

At the bottom of the visible index are celluloid movable signals. Left to right they are: A large orange signal indicates this store to be a group unit. If the account's credit is questionable a large red signal is placed here; if there should be a possibility of reopening an old account but an investigation is first required, a large black signal is shown. The small blue signal shows the month the salesman last called; a small orange signal, the month last order was received. The yearly quota is written in pencil on tab under "quota unit." Under "summary of sales"

<sup>1</sup> Lawson, A. T., "Fingertip Control of Sales Abolishes Guesswork," *American Business*, June, 1945, p. 14.

Fig. 24A.—The card shown above is part of a set of records which provide quick facts concerning sales to dealers, a sales summary, percentage of quota.

at the right, blue and orange signals indicate styles of stoves customer has been buying. The small figures at lower right show, by moving the orange slide, the percentage of quota filled.

*Salesmen, training and record.* Much attention is given to salesmen by Majestic. This starts with the salesmen's training and carries through with every detail, year in and year out. The policy is: "Salesmen produce the business that makes pay rolls possible; they make expansions necessary, and make it possible to look for new outlets. It is salesmen who keep factories running. With all other details of manufacturing a product functioning properly, the salesman who knows his duty and executes it with sincerity of purpose will make progress in the years that lie ahead."

*Salesman's record.* Other than the salesman's store activity card, there are three others to complete the set. Card number 1 provides for volume of sales by month, with space for several years' record. Under the volume column is salary and commissions by month, next is travel expense, then total sales cost. At the right is space for percentage of cost sales. Orange slide shows percentage of quota reached. Card number 2 has salesman's name, short history of him and his family, his wife's name, number of children; quota, volume produced, total selling cost, percentage of sales, total earnings, citations, remarks. Card number 3 provides a summary control for three years on each side, the number of days worked each month, authorized dealers called on, new accounts called on, new accounts sold, resale calls, service calls, mileage. The lower half of this card shows the accumulated totals of the different units sold.

*Territorial records.* Inasmuch as the sales representatives of most companies are more or less constantly on the road covering the territories that have been assigned to them, it is important that the sales office have records that will tell exactly not only what territory each salesman has, but also the exact or approximate location within the territory of the salesman on any given day. For the purpose of setting forth the location of different territories, the sales manager usually has on the wall of his office a rather large map on which the territories are clearly marked, either in ink or in colored crayon. In the center of each territory there may be placed a number. A simple code pasted in a lower corner of the map shows the name of the salesman covering each territory as numbered on the map. Sometimes, too, other information in regard to the territories, such as the sales quota for the year, the potential customer population of the territory, and so on, may be shown on the same map.

*Salesmen's route cards.* In order that the sales manager may have a record showing where each salesman is in a territory at any

given time, a simple report form showing the anticipated route of the salesman during a given period in the future, usually a week, often is used. This report may be sent in by the salesman each week with his report of calls and his expense account. On this report will be shown the salesman's name and below, in columnar

Name			
Day	Date	City & State	Hotel
Monday			
Tuesday			
Wednesday			
Thursday			
Friday			
Saturday			
Sunday			

Fig. 25.—Salesman's Weekly Route Card.

form, the dates of the coming week, together with the name of the town and the hotel where he expects to be each day. The use of such a report enables the sales manager to get in touch easily and quickly with any of his men if the need arises. A copy of this same record is also sent to the mailing department to be used by

it in sending mail to the salesmen on the road. Incidentally, such a report is useful to the sales manager in that it shows him at once whether his men are covering all the communities that they should visit, or whether, as is sometimes the case, especially where a lax system of sales control prevails, the men are going only to the larger towns and neglecting the smaller ones. Figure 25 shows a copy of this report.

**Salesmen's weekly expense accounts.** The salesman's weekly expense account has already been referred to incidentally in a previous paragraph. The writer has yet to see two such records that are exactly alike. In general, however, the purpose of the expense account is to ascertain the total amount spent by the salesman and to classify this total by type of expense. Thus, there will be separate columns in which are entered the amounts spent for railroad fare, Pullman fare, excess baggage, and cartage charges

(where salesmen carry sample trunks), for hotel bills, for meals, for auto hire, for miscellaneous items, and so on. Some companies ask that receipts or vouchers be submitted to substantiate certain items shown on the expense account. Figure 26 illustrates this record.

Item	Sun.	Mon.	Tues.	Wed.	Thurs.	Fri.	Sat.	Total	Remarks

Fig. 26.—Salesman's Expense Account.

Records of sales estimates and quotas. One important set of records of the sales department has to do with sales estimates, quotas, and budgets. Sales quotas are often based on more or less detailed market surveys or analyses. The translation of these figures into the final sales budget includes many necessary adjustments that must be made to suit the requirements or restrictions of the other departments of the business, such as production, finance, and so on. Setting sales quotas and making up the final sales budget constitute a problem too great and complex to be treated here. Even the records that are involved can be indicated only very briefly. The data upon which sales quotas are based should include an estimate, submitted by the salesman himself, regarding the sales possibilities in his territory. These figures must be totaled and analyzed by the district sales managers and reports, containing suggested quotas, must be sent to the general sales manager. On these reports a tentative sales estimate or statement of what the sales department thinks it can sell, in terms of volume and of value, during the coming period is prepared. These figures are then submitted to the various other departments of the business, after which they are revised before being finally approved. When this final approval is received the whole process is repeated in reverse order with a view to arriving at a definite quota for each salesman. During the period covered by the quota, frequent comparisons must be made between estimated sales and actual sales. Unforeseen conditions may arise—and in practice do arise with annoying persistency—which make it necessary to revise the quotas or estimates during the period. All of these activities require the making and the keeping of numerous records and reports by the sales department, as well as by other departments.

Sales quota record of Maremont Automotive Products, Inc.  
One method of keeping the records that contribute to the establishment of a sales budget is illustrated below.<sup>2</sup>

Maremont sales records contain information on 2,500 accounts in 22 territories covering all states and Canada with an annual sales volume that runs into millions of dollars. A visible card was designed which tells the story of every account from its contract number to its last dollar of monthly sales. This sales account card gives the picture of the sales records of dealers and territories by opening a single tray and glancing

<sup>2</sup> Eastman, P., "Sales and Quotas at a Glance," *American Business*, April, 1946, p. 18.

at the visible margin of the cards. Through the use of a sliding insert, without raising a card, records reveal the percentage of sales of each account of the sales total of the previous year. Posting of monthly sales records is made with a minimum of effort and time, as this device automatically translates the current cumulative sales total into percentage of sales for the previous year. With all the cards signaled in this manner and grouped according to territories, the sales director can see which dealers, salesmen, towns, or states require attention.

In addition to cards for the 2,500 franchise dealers classified as ledger accounts, there are 900 cards for customers buying both spring and muffler items. These records also contain information on approximately 650 branches or jobbers supplied by a franchise dealer. Branches or jobbers have a card under their city index, for referring inquiries from consumers to the nearest Maremont dealer.

The upper left-hand corner of customer sales record cards contains information on the franchise dealer; to the right are listed branches and jobbers. Columns printed on both sides provide space for a 10-year record of monthly and cumulative sales. Information for all monthly sales totals is sent by the accounting department to an entry clerk who makes all entries and operates the sales analysis system.

The following information is entered on the sales record cards: A customer number is assigned to each account for identification and accounting purposes. The area covered by each of Maremont's 22 salesmen is indicated by a territory number. This is followed by the names of the buyer, sales manager, owner. A contract number is entered for all franchise dealers. Under the title "Catalog Number," code numbers represent the type of catalog and price lists supplied the dealer. Below this is the name of the manufacturer who formerly supplied this account.

Two credit ratings are recorded, one supplied by the Motor and Equipment Manufacturers Association, the other by Dun & Bradstreet. There are also two entries for direct-mail promotion. Services are available to dealers whereby literature is mailed to the dealers' customers at a service charge. In the right-hand corner of the card a record of sales promotion work is kept. This shows the period covered, amount sold, and initials of the person who did the sales promotion work. This sales work is done by a Maremont promotion man, other than the regular salesman, who works with the dealer's sales staff in promoting Maremont items.

Sales figures for each month and the date of the latest sales call are recorded. Sales volume is carried on a cumulative sales basis showing total volume to date; figures for yearly sales totals are entered to the right of these columns. The total volume of sales for the previous year is used as a basis for establishing the next year's sales quota for each account, and is also the basis on which the sliding insert is set up to calculate the current year's business. The total for the previous year is the 100 per cent total for the current year.

After dealers have been classified as ledger accounts, this information is entered on a sales record card, which is placed in a pocket with a

printed insert along with the necessary signals to classify the account. Each insert is set at the total dollar value of annual business for last year for the account. This system works in the manner of a slide rule in automatically translating cumulative sales into percentages of the sales quota set for individual accounts.

A narrow red signal at the left of the card is used to show the month of the latest call by the salesman in that territory. A yellow signal used at the left of the card denotes a muffler customer; a blue signal, a spring customer. Smaller colored signals are used in conjunction with large signals to classify further these accounts as to type of parts sold. A purple signal is used to classify a customer as a branch or jobber of a parent account.

Figure 27 shows how this visual system of sales analysis works when the cards are placed together in a tray and arranged according to territories. These cards cover the first 3 months of 1946. Glancing at the signals, the sales manager will not pay attention to the first and last cards, because the signals are in a normal position. In both cases these accounts have bought approximately 25 per cent of their yearly quota. At the end of March, indicators point to 25 per cent for most of the cards. However, the indicator on the second card is to the left and shows this account has bought only  $14\frac{1}{2}$  per cent of its quota instead of 25 per cent. This account is lagging almost 2 months behind the others in sales volume. Following through, the sales manager glances to the left of the card and notes a salesman has not called since January.

The third card stands out because the indicator is so far to the right. This tells the sales manager the account has filled almost 42 per cent of its sales quota, as compared to 25 per cent for most accounts.

to reinstall a variant no better because modern business cannot be done profitably without records of experience. It costs no more to have a genuinely useful record than to have a record that is a failure through and through.

*Fix the responsibility.* Experience has taught that the way to make sales control records the powerful aid to sales department operations that they can and should be is to make a staff employee of the administrative department responsible for the design, installation, operation, and analysis of the sales control record, so that the sales manager is free to use it. This is no different from the universal practise of making the comptroller responsible for preparing financial records for the use of plant executives who are not expected to concern themselves with accounting techniques in detail.

The first step that must be taken to insure a workable and profitable sales control record is to assign somebody to this job and to stipulate that he be solely responsible for the record and coordinate it with the sales department. Unless and until this is done, sales control will be at least partly illusion and far less useful and profitable than it should and can be.

*Analyze the problem.* The next step is to analyze the business in relation to the economy. The best way to go about this important task is by consultation among the administrative, financial, and sales executives. Some of the points to consider are: plant capacity and location with respect to markets; product range; breakeven point volume; volume objective; nature and extent of expansion plans, if any; balance sheet position; competition encountered directly from other makers of like products and indirectly from alternative products that can accomplish the same general purpose; size, location, and relative importance of markets for each class or type of product; buying habits and practices of ultimate consumers and intermediate handlers; channels of distribution used, and alternate channels available; number of customers; number of prospective customers; distribution of customers and prospects by relative importance; minimum size of profitable transaction; importance of unprofitable transactions from a service point of view; number and location of salesmen or branch offices; gross profit margin by product classes; salesmen's compensation plan and possible modifications thereof; long range and cyclical trend of demand by product classes, and seasonal variations among them; etc.

When these and related points that will suggest themselves in terms of one's own business are set down and answered in orderly fashion, the kind of sales control record one needs emerges in outline. Its probable size will also be indicated in general terms. It must be remembered that a sales control record is both a record of sales and an instrument of control—and the control aspect is by far the more important.

*Why sales controls fail.* Many sales executives and many sales control records fail to accomplish their objectives, because they concentrate too intently on the individual accounts and summations of them. The "law of averages" in the sense it is commonly understood is the worst

enemy of salesmen and sales executives. It is perfectly true that you've got to make calls if you want to get results; but it is equally true the calls have to be in the right places at the right times, if the results are to meet expectations. Averages are all right when they are properly used, but they are too often misused.

"Averages" conceal the facts. If you have eleven customers who buy \$1,000 each and one who buys \$133,000, it is true your average sales per customer are \$12,000; but it means nothing. Yet too often sales statistics are put in a form that conceals the important facts by averaging or adding them in with unimportant things. When that is done, the sales control record becomes self-defeating. The real function of the sales control record is to increase profits, either by increasing sales through bringing the salesmen face to face with potentially profitable customers a greater share of the time or by cutting the costs of distribution—or both. It cannot perform that function, if it is used merely for individual account control on a hunch basis or if it is used as a means for "getting up a report" of salesmen's and branch offices' total of sales and calls.

*Sales record "musts."* What it can show and what it must be made to show, if it is to be a real aid to management, is the true condition of the sales activity. It must show what constitutes a profitable customer, and how many customers are profitable. It must show what kinds of customers are unprofitable, and how many of them are being sold. It must define profitable and unprofitable customers in ways that enable the management and the salesmen to differentiate among prospects so that time and promotional effort goes only to those who have a reasonable likelihood of returning a profit when and if they are sold. By revealing such facts as these, it lays a basis for some real sales planning and for seeing to it that the plans are followed as long as they remain sound and are modified when changes are needed.

Specifically, the sales manager can:

1. Interdict salesmen's calls on the unprofitable group and the prospects like them;
2. Prune his sales promotional lists of all the worthless names;
3. Assign salesmen's call quotas to the worthwhile customers and prospects like them;
4. Locate present customers and actively cultivate prospects who offer potential volume in lines not now bought from his organization, and see to it they are solicited regularly for this business;
5. Develop and commence cultivation by salesmen's calls and direct mail of new and hitherto unsolicited prospects having the characteristics of the profitable customers;
6. Reduce travel costs and wastes of time spent in beating the bushes for unprofitable accounts;
7. Modify the compensation plan along lines that will make it financially worthwhile to concentrate on assigned accounts and prospects without raising the percentage of direct sales expense; and
8. Reduce office costs, shipping and billing expense, outbound freight costs, and many other overhead items through the reduction in the number

of transactions necessary to conduct the same or a greater volume of business at better margins of profit.

When these kinds of benefits are obtained, sales control becomes a profitable reality. They cannot be obtained unless one knows where and how to seek them. This knowledge can be learned from a well organized sales control record.

## 12

### *Office Management in the Advertising and Sales Promotion Department*

As in the case of the order and sales departments discussed in previous chapters, a very considerable amount of office management and record-keeping work is done in the advertising and sales promotion departments. Unlike most other departments, however, the precise duties and responsibilities of the advertising department vary rather widely with different companies. In addition, the way in which the work is divided between the advertising agency and the company advertising department obviously has an important influence on the nature and extent of the work to be done by the company itself. Before turning to a discussion of office management in the advertising and sales promotion departments, therefore, these matters must first be considered.

The place of the advertising function in business organizations. The place of the advertising and promotion function depends both on the nature of the business and on the particular situation within the company. In many manufacturing establishments the advertising manager is responsible to the sales manager. This arrangement is used not because the advertising manager is less important to the company than the sales manager, but because the sales manager is responsible for the distribution of the company's products, and, therefore, everything that aids him in distributing them successfully, including, of course, advertising, should be under his general supervision. In some concerns close coöperation between advertising and sales is secured by making the advertising manager an assistant sales manager, and, in turn, making the sales manager assistant advertising manager.

In other industrial organizations advertising and sales promotion are two separate departments, although each necessarily works

within the company who will act not only as contact man between the company and the agency, but who also will head a department that will be responsible for doing a considerable amount of actual advertising work.

**Duties of the advertising and sales promotion departments.** As has been indicated, the specific responsibilities of the advertising departments vary considerably in different lines of business, and also with different concerns within the same industry. McKinsey & Company recently made a survey for the Association of National Advertisers, Inc., of the organization of the advertising activities of a number of member companies.<sup>1</sup>

Our examination of the organization of the advertising activities of the participating companies—as would be expected—discloses no definite pattern. Naturally advertising organization is influenced by factors such as objectives, scope of advertising responsibilities, need for coordination with other activities such as public relations, and the size of the advertising budget.

To the extent that generalizations on advertising organization can soundly be made, this can be said:

1. Since advertising is used primarily as a selling tool, in the majority of medium-sized and smaller companies advertising activities are regarded as an integral part of marketing. In such cases the Director of Advertising reports to the chief marketing executive.
2. In many companies, the sheer size of the advertising budget or the importance of advertising to the particular business calls for a separate division, with the Director of Advertising reporting to the chief executive. In such cases sales promotion activities are usually a responsibility of the Advertising Division. This organizational set-up is common in the larger companies.
3. In some companies advertising is closely allied with public relations. Here the two positions are combined, with the chief of the division reporting to the President.

Our study indicates that currently there is a considerable amount of reorganization and realignment of advertising responsibilities and relationships. For example, several companies expressed a desire to participate in the study but were unable to do so because advertising activities were in the process of reorganization. In two instances participating companies realigned advertising activities while our study was in progress.

The following check list of activities indicates the many duties which are found in advertising departments.<sup>2</sup>

<sup>1</sup> "Organization of the Advertising Function," Association of National Advertisers, Inc., New York, 1946, p. 5.

<sup>2</sup> *Ibid.*, p. 169.

**CHECK LIST OF ACTIVITIES (OTHER THAN PRODUCT ADVERTISING)  
PERFORMED BY 202 A.N.A. MEMBER COMPANIES**

This is a tabulation of replies from 202 A.N.A. companies relative to the non-product-selling activities performed by the Advertising Departments in these companies. The limitations of this tabulation should be recognized; it does not indicate the *frequency* with which an activity is performed nor its *importance* in the company.

**Departmental records.** The following sections describe the more important basic records used in the majority of advertising and sales promotion departments.

**Record of prospects.** One of the most important records of the advertising department is the prospect file and follow-up card. Such a record is used in connection with direct-mail campaigns, and also for the purpose of recording the follow-up work done with a prospect whose name has been secured as the result of an inquiry based on an advertisement, or from other sources. The card will naturally contain, usually in the heading, the name, address, and business of the prospect, while the body may have a number of

columns for recording information on what has been done and also for noting the final disposition of the case. Such headings as

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31

Fourth Letter																															
Fifth Letter																															

Fig. 28.—Prospect Follow-Up Card.

"First Letter Sent (date)," "Second Letter Sent (date)," "Folder (or catalogue) No. — Sent (date)," and so on, are used for recording information in the body of the card. Inasmuch as all correspondence with the prospect, of course, is filed separately, it is desirable that the prospect card have a space for a cross reference which will show where such correspondence may be found. When the time at which the various pieces of mail matter are to be sent out is important, or when it is desired to follow up a customer on a specific date in the future, the use of a small guide tab placed at the top of the card over the particular date will make the follow-up practically automatic. Numbers 1 to 31, each representing a date in the month, can easily be printed in a line across the top of the card for this purpose. Prospect cards are usually filed alphabetically according to the name of the prospect, although other methods of filing are sometimes used—for example, filing the cards according to the article or product in which the prospect is interested, and so on. Figure 28 illustrates one of the forms used for such records.

Mailing lists. Closely allied with the prospect card, and frequently the source from which names for prospect cards are secured, is the mailing list. While it is by no means an easy task to secure a really good productive list of names, there are several sources that may be used to advantage. A number of companies specialize in the business of compiling mailing lists, which they then sell to business organizations. Directories, club memberships, lists of

magazine subscribers, lists of telephone subscribers, and many other sources are also widely used.

Mailing lists are usually prepared alphabetically, often subdivided geographically by states, counties, and cities. The names themselves may be kept either on sheets of paper, in which case they are filed in the regular way under an appropriate heading, or on stencil plates or cards. The method best suited to a particular case depends largely upon the way in which the names are to be put on the envelopes or wrappers. If either hand or typewriter addressing methods are to be employed, the names may be listed on sheets. If, however, the list is to be run off on an addressing machine, the stencil plate is preferable. The latter method is really economical only when the volume of work to be done is large.

Every advertising department should also make some definite provision for a record on which employees of this or other departments may note possible new sources of names that come to their attention. Such a record may be made of considerable value, since it affords an opportunity to preserve for future reference specific suggestions that might otherwise be lost or forgotten.

The auditing of mailing lists. It is important that mailing lists be audited regularly. The waste from duplications, and mailing to dead names and non-prospects, is startling. This waste is composed of the excess postage paid to the government and the cost of paper and printing service for quantities of non-deliverable printed matter.<sup>3</sup>

In order to revise lists, the advertiser should:

1. Send out an inquiry every year, under first-class cover, asking the recipient to help correct the list by returning the card and supplying the correct address. The outside of the envelope should have a notice to the postmaster, similar to the following: "Postmaster: If mail is not deliverable to address shown, please return to writer." The notice will usually prevent the postmaster from forwarding the mail in case the addressee has moved, and enables the sender to run down the correct address.
2. Watch the trade papers for notices of changes of address or name, new concerns, combinations, deaths, etc.
3. Ask your salesmen (company salesmen, distributors' or dealers' salesmen) to advise you of all changes. Some concerns supply salesmen with "change of address" blanks.
4. If lists of names in cities are of worth-while size, send them to

<sup>3</sup> Tompkins, C., "How to Audit a Mailing List," *Advertising & Selling*, March, 1946, p. 58.

the postmasters in those cities for checking the names and addresses. They will eliminate dead names, show changes of address, etc., for a nominal fee.

5. All third-class mail should carry the legend, "Return postage guaranteed" and also the clause: "Postmaster: If addressee has moved, notify sender on Form 3547, postage for which is guaranteed." These legends will help weed out the dead names but they won't do the entire job.

6. All mail should be zoned, if possible, to speed delivery and to effect delivery which might not otherwise be made. The Post Office Department is glad to assist in zoning lists. If the lists are separated into cities, the postmaster will mail them to postmasters in the various cities under his franking privilege, without cost to the advertiser. Each individual post office will zone the list and return it in from three days to two weeks, depending on how busy the post office is.

Many concerns have definite regulations for weeding out unproductive names. Sears, Roebuck and Co., for example, is able to grade its customers—as a result of its long experience—into groups, based principally on the customer's past business record. Groups with low potential business value are removed from the files periodically.

The advertising budget can often be relieved considerably when the list has been brought up to top efficiency. Every dead name removed means a substantial saving in postage, cost of printed matter, addressing, stuffing, etc.

Records of advertising rates. Just as a purchasing agent naturally wishes to have a record of the prices he pays vendors for various materials that he buys from them, so the advertising manager wants records of the cost of what he buys in large quantities annually, namely, advertising space and time. A record of advertising rates of all mediums in which advertising has been placed, as well as similar information about mediums that have not been used but which may be given favorable consideration later on, is an essential part of the system of records of the advertising department. Such information is available in catalogue or book form. For each newspaper and magazine the listing shows the name and publication address of the medium, total circulation, space rates for the various units of space which may be used, such as a full page, a half-page, a full column, a half-column, and so on, frequency of publication, rates for copy containing colors, and so on. Similar data are compiled for all radio stations that sell time to advertisers. Most advertising mediums themselves also print rate cards containing the same kind of information.

Record of advertising costs and results. An advertising manager uses one medium or refuses to use another because of the results, or lack of them, that he obtains. For this reason he needs

a record that will give definite information on returns in relation to their cost. A record of advertising costs and results by mediums gives this information. For example, the record may show that \$5,000 was spent on an advertisement in a particular medium on November 14. As the result of this advertisement, 450 inquiries were received. This may be determined, in many cases at least, by keying each advertisement. If 150 orders were secured from these 450 inquiries, the direct advertising cost of securing the orders would be \$33.33 each. Although \$5,000 for a single insertion may seem high at first thought, the advertising manager, by reducing this figure

Fig. 29.—Record of Advertising Costs and Results.

ure to a unit-cost basis, is in a position to know whether a relatively few advertisements placed in this medium yield a better return on the investment than a similar number placed in another medium at a lower rate. While the use of such a record is limited to cases in which it is possible to identify inquiries through the use of key symbols, nevertheless, it furnishes an excellent basis upon which to judge the value of the results secured. Figure 29 illustrates one form of such a record.

**Record of results obtained by an advertisement.** Another record frequently used is one which gives information about the pulling power of various advertisements. It sometimes happens that a particular piece of copy or radio "commercial," which everyone in the advertising department thought would "pull" extremely well, fails to justify itself when put to the test, while another, which may not have been considered so good, proves to be a huge success. A record that shows actual results obtained is one which many advertising managers find valuable. Inquiries and orders received from each advertising message which can be identified are recorded in much the same way that results by mediums are entered on the record just discussed.

Checking advertising results. This subject of checking the results of advertising was discussed in detail by the Advertising Manager of American Photocopy Equipment Co. Her recommendations follow:<sup>4</sup>

<sup>4</sup> Weinberg, H. J., "Keeping Tabs on the Ads," *Printers' Ink*, June 15, 1945, p. 24.

Any advertiser who expects to secure leads from his ads can use his own records as a means of testing the effectiveness of his advertising.

To put thousands of dollars into advertising space, and then keep no accurate records of results, is like pouring that money down the drain. Yet there are advertisers who have only a very sketchy idea of what their ads are bringing in.

*Keying ads.* It seems almost unnecessary to state that inquiry copy must be keyed. How else can one know where the inquiries come from? Keying copy should not be haphazard. It should have a definite plan. Address keys are sometimes used to identify inquiries from certain publications, but addresses have not enough flexibility to identify specific insertions in different media. They won't take care of an extensive campaign—that is, one appearing in a long list of publications.

The use of key letters and numbers affords a much wider range. For instance, one may start with A and go on through the alphabet, using a different letter to indicate each different publication. An even easier method of identification is to use the initial letters of the publication itself. For instance, the Nut and Bolt Review could be keyed NBR, and the date of insertion would be indicated by numbers—the May 1945 issue being keyed NBR-55. The easiest place to insert the key in the advertisement is after the company address, for example Doolittle, Brag & Co., 182 Hooey St., Dept. NBR-55, Timeout 32, Ohio.

If several publications have the same initial letters, then, of course, some other combination would have to be used. One might be used backward—such as RBN, and so on. Once you have your key, you have the foundation stone on which the rest of your records study is built.

*Handling keyed inquiries.* Whoever handles the inquiries must have a list of key numbers and what they stand for, and must scrupulously enter every letter or card of inquiry with its key number. An easy way to do this is to have a rubber stamp for marking all inquiries. (See Figure 30.) This should include space for information on key number,

DATE REC'D. _____
SOURCE OF LEAD _____
KEY No. _____
TERRITORY No. _____
SALESMAN _____

Fig. 30.—Stamp for Inquiries.

name of publication, date inquiry is received and salesman in the territory. The same information is put on a lead slip (Figure 31), which is made out in duplicate, one being sent the salesman and one kept for the company's prospect files. It is also very helpful to the salesman,

STATE	CITY	SALESMAN			
PROSPECT		DATE			
ADDRESS		INDIVIDUAL & POSITION			
NATURE OF BUSINESS

HAVE THEY SEEN DEMONSTRATION	NO	YES	WHEN?	WHERE?	
REMARKS:					
SOURCE OF LEAD					

Fig. 31.—Lead Slip.

if you send him a photocopy of the original letter of inquiry. The key symbol is now entered on a daily record sheet, and each time an inquiry is received bearing this symbol, a check mark is made under that key. At the end of the day the checks under each key are totaled, and the total is entered in permanent records books.

*Advertising media.* Where a long list of trade publications is used, it is wise to have a record book or ledger for each classification given in Standard Rate and Data. Then the publications which come under that classification are arranged alphabetically, and each ad in a publication is given a separate page, in chronological order. The best way to keep these records accurately is to rule the sheets for months and days, and divide each column into spaces for inquiries and sales. The inquiries and sales should be totaled at the end of each month. In a space at the bottom of the sheet periodic cumulative totals can be written in, in pencil, to check how the ad is going. A tear sheet of the ad should be pasted on the back of the page.

Of course, it is of the utmost importance to know what pieces of copy are pulling in each publication, and what pieces have pulled the best in general. For this reason, each piece of copy should have a code number or letter, starting with 1 or A. The copy code number should be written on the record page in the advertising ledgers discussed above. Then, when you look through the records of a certain publication for six months or a year, you can see at a glance which pieces of copy pulled best in that publication.

*Salesmen's advertising ledgers.* One of the most important checks which can be made on keyed advertising is to find out which territories

are receiving too many and which too few leads, and what your salesmen are doing with those leads.

A good idea is to keep a separate record book for each salesman, a ledger of accounts with salesmen. In this book should be entered each day the name and address of every prospect who writes or phones, with the date inquiry was received and the source of lead. Space should be left for the salesman's remarks when he reports his calls on the prospect, as well as dates when follow-up letters are sent to prospect, and space for date of sale. Salesmen should be required to report contacts with all prospects on special report forms for this purpose.

*Salesmen's report on prospects.* A good report form for salesmen provides space for the salesman's name; date of his call on prospect; whether his contact was by letter, phone or visit; date of original inquiry (indicate whether a lead or a cold call); the name of the prospect's firm; the prospect's name and position; the address, city and state. With equipment that must be demonstrated, space should be given to indicate whether demonstration has been made, when and where. Then there should be ample space at the bottom of the form for reasons for no sale. Be specific here, having the form state, "If you have not sold—give three reasons." The forms should be the same size as the lead slips, so that they may be filed with them, but they should be a different color to avoid confusion. (Figure 32.)

STATE	CITY	SALESMAN

HAVE YOU SHOWN NEW OR ADDITIONAL USES?				YES	NO	
TO WHICH DEPT. HEADS? (GIVE NAME & TITLE)						

Fig. 33.—Salesman's Report on Customers.

*Entering sales reports.* Just as inquiries should be entered in a daily record book and later transferred to a ledger, so also for sales. As the orders come in, a file clerk should look up the original lead under that name and find what source originated the order. The key number and name of publication should be written on the order—also the date of the original lead. The date of the lead provides valuable information if the advertising department wishes to check the average lag between date of inquiry and date of sale. The advertising record clerk should, of course, enter the publication key numbers for orders on her daily record sheets in the same way that she did for inquiries, and later these should be transferred to the ledgers.

*Periodic advertising reports.* It is a good idea to make a periodic check on the results of ads in publications, for this prevents running a poor piece of copy for too long a time, or scheduling advertising in a publication that is not producing results.

These reports can be made monthly, bi-monthly or every two months, whichever period the advertiser finds more valuable for checking on results. These reports represent a good deal of manual labor, so it is not necessary to make them out in detail each time. A long sheet should be used. At the left have spaces for the copy number, the name of the

publication, date of issue, appearance date and cost of ad. Then the form should provide spaces across the page to write in the number of inquiries, cost per inquiry, number of sales and cost per sale. This need only be written in completely in the first spaces. After that only additional inquiries and sales need be indicated. In this way there is room on the form for about six reports. These could cover a period of from three months to a year—depending on how often the advertiser decided to make the reports. Where an advertising agency is used, it is a good idea to send the account executive photocopies of this report.

A glance through this report will show management what publications and what pieces of copy are pulling, and will help in planning future advertising. Of course, the exact number of inquiries and sales received from any single piece of advertising should not be taken as too literal an indication of the value of a publication or a piece of copy. Every advertiser will receive a number of inquiries that give no key number and must be credited to "unknown sources." Therefore, the report should be used for basis of comparison only and should be weighed in the management's minds with contributing factors.

Another valuable report, particularly as a check on advertising expenditure, is a monthly record of all types of business received—that coming from publication advertising, from direct mail, from trade shows, from recommendation, from cold calls and from unknown sources. This should include cost for each and cost per inquiry and per sale, as well as total costs. It should also indicate the percentage of business coming from each source, and the percentage of closures from inquiries. The direct-mail part of the report should show percentage of returns based on pieces mailed.

This report can also be figured quarterly, half-yearly and yearly, and used for comparison with previous years.

Important information as to the value of different publications comes from finding out which produced the leads that resulted in the greatest repeat business. This can be ascertained from a customer record card on which the source of original lead is shown and every purchase is entered. A periodic checkup here will often show that some publications which are pulling only a few leads have resulted in sales that meant big repeat business.

*Direct-mail records.* The keeping of direct-mail records is a subject in itself. First of all, every list should be given a key number, and every mailing of that list should have an additional key. This corresponds to the key used for date of issue in publication advertising. For example, List A, mailing of March 12, 1945, is keyed A-3/125. A separate page should be kept in the direct-mail advertising ledger for each mailing, and inquiries and sales entered exactly as for publication ads. In addition, the number of pieces mailed should always be shown, so that a percentage of returns on every mailing can be figured. This tells what seasons of the year are best for direct mail.

On the back of each sheet paste the mailing piece and return card

which were used in that mailing. In this way, one can easily make a check and see which mailing pieces are most effective, and which colors get the best response.

Be sure that your return cards are keyed, so that when they come back you will know what list and what mailing they belong to. The ideal situation, of course, is to have a different color for every mailing, but this is not always possible. One way to key is to have cards of the same color stamped with different numbers. Another is to cut a corner off the card. Be sure the sample card you paste in your ledger has this number or cut for identification.

*Recording test mailings.* Suppose you are mailing 3,000 pieces for a test, trying out three different circulars—one for each 1,000—and using a different return card for each circular. Keep a separate page in your ledger for each of these mailings as explained above, and in about three weeks you will be able to see your results.

#### SOME SUGGESTED ANALYSES OF RECORDS

1. Check copy appeals. After you have been keeping your advertising reports for about six months, check each piece of copy through every publication in which it was used. Record total cost of that copy and divide by number of inquiries and sales to get the average cost per inquiry and per sale for that piece of copy. Then compare these results. See which copy appeals have done the best consistent job, which have been best in executive publications, which in business papers.
2. Check publications regularly to see which are producing cheapest inquiries and sales, which are closing greatest percentage of leads.
3. Check your customer record cards to find out what source of leads is producing biggest repeat business.
4. Check your salesmen's record books to find out which territories are producing most leads, which too few, etc. If you wish, check by publication, and find out whether certain publications seem to pull more in certain territories.
5. Check salesmen's record books to find out what percentage of the leads each salesman is actually contacting, and what percentage of the contacts he is selling.
6. Analyze reasons given by salesmen for "no sale" to find out if advertising was in any way misleading or not informative enough.
7. Analyze salesmen's reports on visits to customers to find out what your customers like about your product, what specific complaints they have, how well they are satisfied with your service, etc.
8. Check on what happens to leads from some particular ad which perhaps has pulled a lot of leads and closed poorly. Go through salesmen's ledgers and analyze their reports on these leads. Find out how many were mere curiosity, how many actually had no use for your product, how many misunderstood your advertising, and how many the salesman failed to do a good job on.
9. Make periodic check on inquiries and sales to see from what types

corresponding with such prospects and making certain they get what they want.

Requests for technical assistance go to engineering service, where a staff of three or four engineers answer the requests, some of which may require hours of work to prepare the information. Some typical requests are: The procurement and office engineer of a Chicago building material manufacturer asks help in designing the radiant heating layout for a small office building. A general contracting firm of San Bruno, California, sends calculations and layout for a residential radiant heating system for criticism.

The 117 letters designed to go to Direct Mail Service are simple requests for technical bulletins and are first scanned carefully by a sales promotion clerk, who time-stamps each one, indicates by number the personalized letter that should accompany the bulletin, and designates the sales territory from which the request originates.

The letters are then taken to Direct Mail Service, where the proper bulletin is taken from the stock room, and the covering letter is processed and then personalized by typing in the name, address, and salutation. The mail is scheduled to go out the same day the request is received. The original letter of request is again time-stamped to show when it was answered and is forwarded to the proper sales division of Byers for follow-up.

It should be noted that the routine of this work automatically gives inquirers and prospects same-day service, yet important inquiries get the personalized attention of the sales promotion manager or the engineering service department.

## 13

### *Office Management in the Purchasing Department*

Like office management activities, purchasing has not always been centralized. Prior to World War I, purchasing was considered by many businessmen to be a function that could be carried on by a department head in his spare time. In comparatively few of the larger and more progressive concerns, to be sure, there was some centralized buying, especially of basic raw materials. For the most part, however, the purchase of sundry supplies and materials was a part of the work of each department head. That war brought a very noticeable change in these conditions. Many centralized purchasing departments were established. Little consideration was given, however, to prices paid, sources of supply, records, or systems. Purchasing was in most cases largely a matter of buying the best that could be obtained under the circumstances, at whatever price one had to pay and from whoever was able to make the quickest delivery.

This condition prevailed until the summer of 1920. Then a definite change took place, due primarily to depressed business conditions. Many companies found themselves with large stocks on hand of both raw materials and finished products, which in many cases could not be disposed of at cost, much less at a profit. The practical importance of accurate, complete, and detailed records and of proper systems of control became quickly apparent. Purchasing agents were rather rudely awakened to the fact that skillful purchasing did not consist wholly of signing their names to purchase orders, or of acting as transfer agents of facts from purchase requisitions to purchase orders. They began to realize that rule-of-thumb methods of buying, as well as failure to utilize the best methods for recording the many kinds of information which they must have constantly available, were bad business policy because they were likely to be costly. Centralized purchasing, which in many cases had been something of an experiment or had been

looked upon as a temporary expedient, was more and more adopted as a permanent policy. Records and office methods that gave the vital facts in concise form were adopted. Today by far the greater portion of firms operate their purchasing departments on this more efficient and economical basis.

**The office manager's interest in purchasing.** The work of the purchasing department is an activity in which the office manager usually has a particular personal interest. In the first place, the office manager in a small concern sometimes also acts as purchasing agent. This is especially true in the case of the branch-office manager, who often combines the responsibilities of office manager, personnel executive, purchasing agent, accountant, and credit and collection manager. Second, the office manager necessarily has constant relations with the purchasing department in connection with the purchase of office equipment and supplies, and often in connection with the supervision and operation of the stationery stock room. And finally, as the executive who has a functional interest in the methods, systems, and procedures of all departments, the progressive office manager should make it part of his business to audit purchasing department methods periodically, just as he does those of all other departments.

**Scope of the purchasing function.** As in the case of every other operating department, the function of the purchasing department and the scope of the authority and responsibility of the purchasing agent, or director of purchases as he is frequently called, vary in practice rather widely. In some cases his work consists almost exclusively of purchasing, and the purchasing department is in effect a specialized service section of the production department. In other organizations, on the contrary, the director of purchases is a departmental executive who reports directly to the president or general manager and who is responsible for traffic, inventory control, stores, testing, inspection, and receiving, as well as for purchasing.

**Principles of procedure.** In a discussion of purchasing procedure, Professor H. T. Lewis of the Harvard Business School recognizes seven principles of sound procedure which should be applied when considering the establishment of a procurement procedure.<sup>1</sup>

Fig. 34 (Cont.)

1. The aim of all sound procedure is to accomplish a definite objective in the shortest, easiest manner consistent with accuracy and satisfactory results generally.
2. Simplicity is basic; a cumbersome system slows down operations and increases the possibility of error.
3. Good procedure needs to be definite and understandable in order to obviate friction, duplication, and confusion generally.
4. Responsibility should be fixed for each step of the performance.
5. The procedure should be sufficiently elastic and flexible to allow for either expansion or contraction as conditions require.
6. The system should be as inexpensive as is consistent with the task to be done.
7. Finally, however, the system must be adequate; regardless of how simple or inexpensive a system may appear to be, it is quite useless unless it performs with reasonable satisfaction the task for which it was created.

#### ESSENTIAL STEPS OF PROCUREMENT

The essential steps of procurement in purchasing procedure may be indicated substantially as follows:

1. The ascertainment of the need.
2. An accurate statement of the character and amount of the article or commodity desired.
3. The transmission of the purchase requisition.
4. Negotiation for the possible sources of supply.
5. The analysis of the proposals, the selection of the vendor, and the placing of the order.
6. The follow-up on the order.
7. The checking of the invoice.
8. The receipt and inspection of the goods.
9. The completion of the record.

Figure 34 gives all the steps in procedure for one company.

Attention will be given in the sections that follow to all functions and activities of the purchasing department mentioned above. However, since the office manager is primarily interested in procedures, methods, and records, the work of the department is discussed, not by departmental divisions, but in the order in which the records are usually handled by the department. In this way it will be possible to secure a clear picture of the office methods and plan of work in the average purchasing department.

**The requisition.** Most of the work of the purchasing department starts with a purchase requisition originating outside the department, and received in duplicate.

Purchase requisitions should be honored only when approved by

designated authority. In most instances the stock and stores management will be this authority, but since many purchases require different approval, a chart of essential signatures should be set up. For quick identification and ready reference, code letters and definite number series should be assigned to each department authorized to issue purchase requisitions. Such a plan assists in establishing responsibility for each requisition, makes it easy to get or give information regarding it, and facilitates statistical work involving requisitions. Figure 35 illustrates a usual form of requisition.

Fig. 35.—Requisition.

**The stock record.** The first step taken by the purchasing department upon the receipt of a requisition is to determine whether a sufficient quantity of the item requested is available in the stock room. In many companies all requisitions are first sent to the store-keeper, who indicates thereon whether the item can be supplied from stock. In such cases, requisitions that can be filled at once from stock may never reach the purchasing department. The purchasing agent, however, receives many requisitions directly from operating departments for items regularly bought. All of these should be checked first with the stock records.

The primary purpose of the stock record is to give a complete statement of receipts, issuances, and balances on hand of every item carried in stock. This information is obviously essential if promised

delivery dates to customers are to be kept, if periodic financial statements are to be prepared at times other than when a physical inventory is taken, and if quantities to order are to be based on facts and not on guesswork. A separate card or sheet is kept for each individual item carried in stock.

The stock-record form. A form of stock record is shown in Figure 36. The heading should contain spaces for such information as name and symbol number of the item, unit of measurement used for ordering or issuance purposes, place in the storeroom where the material is stored (*section No.* —, *aisle No.* —, *bin No.* —), average consumption or usage of the material over a period of time (200 per month, for example), minimum and maximum quantities, order point, and so on.

Fig. 36.—Stock Record.

gencies is always available, and a definite point for re-ordering is established as a guide for use by the storekeeper and the purchasing agent.

The body of the stock-record form should provide for main columns entitled Ordered, Received, Issued, and Balance Available. Under each of the first three main headings are sub-columns showing the purchase order number (or sales or production order number in the case of the Issued column), date on which the order was placed or received, and the number of units involved. The Balance column shows the number of units on hand and the date on which the balance was struck. In some cases additional sub-columns are provided under the headings Issued and Received for showing the unit price and the extended total price. Likewise, some stock-record forms contain sub-columns for running totals under both the Received and the Issued headings, thus eliminating the Balance column entirely. The claim is made, not without considerable foundation, that one does not need to know the balance on hand at all times, and that, moreover, this balance can easily be secured at any time by merely subtracting the last entry in the Running Total sub-column under the Issued column from the corresponding figure in the Received column. The fact, however, that the majority of stock records have a separate Balance column seems to indicate that the "running-total" plan has not gained very wide acceptance.

The Required and Appropriated columns are for use in cases where it is necessary to reserve or set aside certain quantities for sales or production needs before incoming goods that have been ordered have actually been received. In the Required column the details of the total number of units required are recorded. In the Appropriated column the number of available units appropriated for a given sales or production order number is noted. When the incoming shipment actually arrives, the remaining number necessary to complete the requirements is first entered in the Appropriated column. When the issuance has been made, the transaction is recorded in the regular way in the Issued column. For example, if sales order No. 10,892 requires 150 units, but only 100 units are now available, 150 is entered in the Required column and 100 in the Appropriated column. When the new lot arrives, the 50 needed to complete the total requirement is first entered in the Appropriated and then the total (150) entered in the regular way in the Issued column. Under certain circumstances, as, for example,

in the case of highly fluctuating demands in a seasonal business, the use of Required and Appropriated columns is of great practical value. In other cases there is little or no need of making provision for them.

The stock record is one of the mainstays of any adequate and comprehensive plan of record control for the purchasing and stores department. The increased attention being paid by businessmen to the matter of economy, as well as to business and market conditions in their relation to efficient purchasing, is an important practical reason why virtually all well-managed companies maintain some kind of stock-control records.

**Specifications.** If the item requisitioned is not available in stock, a purchase order must be placed. Sometimes specifications accompany the requisition. The specifications are simply a detailed, specific, and, frequently, technical statement of the quality of goods wanted. Dimensions, chemical content, construction, and many other units capable of exact determination and measurement make up the specifications. When the goods are ordered, the vendor is sent a copy of the specifications with instructions to adhere to them within certain definite limits. When the material is received, the specifications are used as a basis for checking quality or content.

**Information regarding sources of supply.** One of the most important office management problems of the purchasing department is to keep the records and other sources of information so that the department knows at all times not only with whom purchase orders have been placed in the past but also who else is a possible supplier. For example, assume that additional office space is being taken and that the purchasing agent receives from the office manager requisitions for carpets, linoleum, electrical fixtures, and office furniture. Such items are not purchased frequently, so it is unlikely that the purchasing agent will know offhand the names of several vendors of carpets, linoleum, and so on, and that he will know exactly what they offer, and the probable price ranges. Yet without doubt sales representatives of several such concerns have called on him within the past year or less. All of them have left business cards, and doubtless some, at least, have subsequently sent catalogues and other sales literature.

Obviously the purchasing agent must have all such information regarding possible sources of supply quickly available. Some companies have very complete systems of numerical and alphabetical indexes in which all items purchased are classified by products,

such as automobiles, trucks, and tractors; coal; oils and greases; rope and cordage; wire goods, and so on. In such cases each product is assigned a number. A subsidiary alphabetical classification is then made of each supplier of each product. In one purchasing office which follows this plan there are thirty-eight sections of the numerical index, while the alphabetical index contains over 5000 items. Some companies go to the other extreme and have little or no written information systematically organized, depending largely on the local classified telephone directory when possible suppliers must be found quickly for an item infrequently purchased. The discussion in the following sections assumes that a reasonable middle course will be followed.

**Contracts.** When an item is purchased regularly, a purchase contract is often made with one or more vendors. Contracts are of many kinds, ranging from a definite agreement to purchase a certain quantity at a certain price within a certain time, to an agreement to protect the price against market changes for a definite period. In any case contracts require a written agreement, usually in duplicate, signed by both buyer and vendor, each retaining one copy. The contract itself is frequently a printed form containing those features that are common to all contracts and providing ample space for typing in the special features of individual contracts. On the other hand, some buyers sometimes feel that there is so much variation in these contracts that it is just as easy to type contracts complete. If this is done, care must be taken to maintain accurately worded general agreement clauses, prepared by the legal department. Certain other agreement clauses for specific commodities need to be just as carefully worded. Especially where the entire contract is typewritten, it is well to preserve a paragraph book with master copies for all such paragraphs. In this case the buyer dictates each contract, using the paragraph book as his guide.

**The contract record.** In addition to the contract file, a contract record must be maintained. The contract itself usually covers a commodity class, such as lumber, steel, and so on. Since it may call for the purchase of a certain quantity, regardless of dimensions and other specifications, within a given time, a record of purchases against each contract must also be kept. The purchase record card, which is discussed in a subsequent section, gives the story only with regard to a particular item, so that each contract purchase must also be posted to the contract record to accumulate total purchases (see Figure 37).

The contract record is often supplemented with work sheets to accumulate details, because of the large number of purchase orders which may apply against it.

**Make-and-hold agreements.** Another form of contract record, usually in addition to the contract and yet preliminary to the purchase order, is the "make-and-hold" or "mill-stock" agreement under which the vendor agrees to make a certain quantity of product to the buyer's specifications, and to hold it a certain length of time, the buyer to order out in smaller quantities at various times for individual plants.

A file of make-and-hold agreements similar to the contract file may be used for the agreements themselves. A make-and-hold record may be used also in a file similar to the contract record. Make-and-hold or mill-stock records differ from purchase records in that they must show unapplied balances still at the mill; also they usually require the analysis of purchases by plant or destination. This is easily accomplished on the record card or by work sheets similar to those used on the contract record.

**Catalogues.** The catalogue files generally contain valuable information on out-of-the-ordinary commodities. In fact, a fair percentage of catalogues and pamphlets are filed, not because the commodity is frequently purchased, but because the purchasing agent feels that some day he may be called upon to purchase the commodity described in the catalogue or pamphlet.

All catalogues should be indexed alphabetically under firm names, and if there is a quantity of them, a sectional index also should be maintained. It is desirable that one member of the staff of the purchasing department be held responsible for the care and filing of all catalogues. It is also advisable, for identification purposes, to have all catalogues marked "*Property of Purchasing Department,*" especially where other departments have catalogue files.

**The inquiry.** As a general rule there are two classes of inquiries, one in connection with goods for which requisitions have been received, and the other covering miscellaneous requests for quotations to be used for estimating purposes, which may or may not result in actual requisitions and orders. Under this latter heading may be included requests for quotations with a view to placing contracts.

The general opinion is that printed inquiry forms sent out in duplicate or triplicate are preferable to letter inquiries, as the printed form is designed so that when it is properly filled in, all

the information necessary to place the business is available (see Figure 38). It is important, when deciding where the order shall be placed, to consider the quality of the goods in question and all charges that may affect the laid-down cost, such as transportation, duty, sales tax, trade and cash discounts, as even the item of cash discount alone often is a deciding factor in placing the business. When such inquiries have been sent out, the requisitions should be filed in a pending file. As this file is never very large, it is comparatively easy to follow up the non-receipt of quotations.

**Quotations.** Quotations are obviously important and valuable not only in connection with the specific order that necessitated the inquiry, but also with regard to future action in purchasing similar commodities. There is, however, some difference of opinion as to the most efficient method of filing quotations. Some purchasing agents prefer a separate quotation file arranged alphabetically, based on the names of the materials on which quotations have been received. Others prefer a similar file, except that the successful quotation is filed numerically under the order number, together with all other papers in connection with the order. Still other firms file all quotations together with all correspondence relating to a specific order numerically under the order number. Obviously this is a matter to be determined by the circumstances of each case.

**The purchase order.** We now come to the purchase order itself. In making out these orders the typist consults the requisition and quotation for the vendor's exact name, address, and terms, the exact wording of the specifications, the quantity, price, delivery, and so on. As many copies as are required by the business will be made and, in most lines, the same number of copies will be used in every instance. A typical distribution of copies of the purchase order is as follows:

Vendor's copy.

Acknowledgment copy (often retained by the buyer as a follow-up copy).

Buyer's numeric or alphabetic copy.

Commodity file copy.

Branch buyer's copy.

Receiving copy.

Accounting copy.

Stores or warehouse copy.

Stock control copy.

**Summary of purchasing department procedure.** Most of the department's authorizations to purchase originate with individual requests or requisitions. The commodity file for the material on the requisition is sent to the buyer, along with the requisition and whatever open quotations may be available. Each request reaches the buyer with complete purchase information attached, so that it can be acted upon promptly.

The buyer next makes his decision and instructs his typist. If the typist is to send out an inquiry or request for bids, she makes as many copies as required, preserving one and sending two to each vendor indicated, while her copy of the inquiry goes to a follow-up file. Vendors retain one copy of the inquiry and return one as a bid, which is attached to other bids in the follow-up file. When the closing date arrives, the bids go to the buyer, who indicates the vendor and instructs the typist to prepare a purchase order. Bids are then filed either in a body in the quotation file under the proper commodity name, or with other correspondence by the name of the vendor. The typist then enters the purchase order on the purchase order register and distributes the purchase order.

Cancellations and change orders follow the same routine, affect the same records, and require similar forms. Merchandise rejections and returns reverse the procedure and affect most purchasing department records. Changes of price must be authorized by the purchasing department on a change order or similar form.

**Purchase and control of office equipment and supplies at American Brake Shoe Co.** The following description of the practices of the American Brake Shoe Co. is interesting, not only from the point of view of purchasing, but also because it involves office supplies and equipment.<sup>2</sup>

Whether the specialists who staff the Purchasing department of the American Brake Shoe Co. are buying paper clips or a locomotive for the company's nine divisions and fifty-nine plants throughout the country, their first consideration is efficient performance. The department's

---

<sup>2</sup> Buckley, G., "How American Brake Shoe Buys for Office Needs of 59 Plants," *Office Management and Equipment*, May, 1946, p. 35.

requisitioning, the plant purchasing agents indicate certain models or a choice of type that the local salesman has demonstrated. Such preferences are followed as far as possible, if the make is an approved one.

If the local salesman has demonstrated equipment, his interests are carefully regarded, although the purchasing department places the order with the manufacturer. A copy of the order is at the same time sent to the salesman in the plant neighborhood. This cooperation gains the good will of the local salesman, essential to the local plant agent in obtaining prompt, efficient servicing of the new machines.

Sometimes local plants buy used machines or one or more pieces of furniture, when advantageous. These, like all purchases, must be referred to the main purchasing department for authorization if over a certain amount.

An extra copy of every purchasing order that a local plant sends out is forwarded to the central purchasing department. Here one man includes in his duties the checking of all such orders, for conformity to the department's policies. If the order is for a used business machine or for office furniture that the local salesman has available, the department may inquire about the condition of the articles before approving.

**Office management and purchasing.** The foregoing example is interesting also because of the role the purchasing department assumes in testing office equipment and establishing standards. However, in most cases this plan does not work well because the purchasing agent or buyer must procure thousands of items and, consequently, cannot be familiar with all of them. Further, very few purchasing departments have established methods of testing and setting standards for office equipment. A Dartnell Survey<sup>3</sup> in 1943, covering 250 offices, found that the answer to lower office costs as related to equipment was close coördination of the efforts of the office manager and the purchasing agent—the former to prepare specifications and develop standards for equipment and supplies, the latter to procure the equipment and supplies at the best price consistent with such specifications.

**Purchasing procedure in a steel-manufacturing company.** The purchasing practice of a large manufacturer of specialty steels will serve as an example of the part office practice plays in the purchasing function. In this case, the control of purchasing is centralized at Pittsburgh. The general offices of the company are located in New York and there are some seven or eight plants located in the northeastern part of the country. In addition, there

---

<sup>3</sup> Anon., "The Office Manager and the Purchasing Agent," *American Business*, August, 1943, p. 24.

are some thirty branch sales offices located all over the United States.

*Plant purchasing procedure.* Representatives of the purchasing department are located at each plant and purchases are made both from local vendors and through the central purchasing department at Pittsburgh. The procedure is as follows:

The need for material may arise in several ways. The stores-keeper may find it necessary to replenish his stock, or some employee in the plant may need a certain item. In either case, a purchase requisition is initiated. This requisition is illustrated in Figure 35. Only one class of material may be listed on a requisition. The classes have been established by the purchasing department and a listing of these classes distributed to all employees who find it necessary to initiate requisitions. This is done so that when the purchase orders are written they carry this classification, and copies of them can be filed in a commodity file.

Upon completion of the requisition, which must contain the quantity of the item required, together with accurate specifications of the material, it is forwarded first to the storeskeeper (if he has not originated it), and thence to the general superintendent or works manager. The storeskeeper must approve it so that material already in stock will not be purchased, and the works manager or superintendent must approve it from the point of view of the control of material and expense.

After the requisition is properly authenticated, it is forwarded to the plant purchasing department, where it is processed or from where it is sent to central purchasing in Pittsburgh, in accordance with previously established policy for the material in question. The following procedure is the same in either case.

Inquiries are sent to vendors asking them to submit bids covering the material on the requisition. If possible sources of supply are already known, the inquiries can be typed at once. If they are not known, it is first necessary to locate them. Figure 38 illustrates the form of inquiry used. It is sent in triplicate to each possible vendor, and the vendors are asked to return the original and one copy with the desired information, or to submit a separate quotation in duplicate if they so desire. The body of the inquiry contains the information which appeared in the body of the requisition. Two copies of each quotation are requested so that the purchasing department may retain one, while sending the other to the

originator of the requisition, should the purchasing department desire the advantage of his advice or preference.

Fig. 38.—Inquiry.

When the bids have been reviewed and compared, the buyer decides which of the vendors will get the order and passes the requisition and the bid of the successful vendor to a purchase order clerk, who prepares the formal purchase order. Upon completion of the purchase order, it is checked and then signed by a member of the purchasing department authorized to do so. Various copies of the purchase order are distributed: two to the vendor, one of which

is an acknowledgment to be returned by him; one to the central purchasing office or to the plant purchasing office, depending upon where the purchase order was written; one to the storeskeeper; one to the originator of the requisition; and one to the accounts payable division of the company. Upon receipt of the material, the storeskeeper checks the material received against the copy of the purchase order, and, if everything is in order, either initials his copy of the purchase order or makes out a receiving report, sending one or the other to the accounts payable division to await the arrival of the invoice.

Invoices are requested in triplicate and are sent to the accounts payable division. One copy is sent to the buyer who placed the order, who is responsible for checking the price and the quantity against the purchase order and the vendor's bid. The second copy remains in the accounts payable division, filed in a tickler file which will bring it to attention in sufficient time so that the company will not lose its discount. (In plant procedure, the third copy is not used and is destroyed.) When the buyer has checked the invoice and returned it to the accounts payable division, this copy is matched against the purchase order and receiving report already in the file and, if everything is in order, the invoice is paid.

*Branch and general office purchasing procedure.* There are no buyers located at any of the branches or at the general offices in New York, all purchasing for these points being centralized at Pittsburgh. The procedure follows somewhat that of the plant procedure mentioned above, except that the office manager in the general offices and the various branch managers perform some of the functions of the purchasing department, in so far as negotiating for sources of supply is concerned. It must be remembered that most of the items requisitioned by the branches and the general office are of the nature of office supplies and equipment. Requisitions for all office forms must be cleared through the office manager at New York, so that the forms standardization and control program will not be by-passed. Branch requirements for other stationery items are lumped together and purchased from Pittsburgh and shipped by the vendors directly to the branches requesting them. Many items of stationery, notably forms, are purchased on a contract basis, and the vendor retains the entire supply, shipping to the various locations as requested.

The general procedure is that the branches send requisitions to New York, where they are passed upon by the office manager,

and, if in conformance with the standards established for office supply items, these requisitions are forwarded to central purchasing. A purchase order is written requesting the vendor to release the required amount of the commodity to the branch. A copy of this purchase order goes to the branch and another copy to the accounts payable division. Upon receipt of the material, the branch will inspect it and if it is in the proper quantity and in good order, it will place it in its stock and initial its copy of the purchase order. When the invoice is received, one copy is forwarded to the branch, which compares it to the purchase order already initialed, signs the invoice denoting receipt of the material, and returns it to the accounts payable division. The second copy of the invoice is forwarded to central purchasing to be checked against the purchase order and the vendor's bid. The third copy remains in the accounts payable division until the other copies are returned by purchasing and the branch. If everything is in order, the invoice is paid.

The description of the above procedures, of course, has been simplified a great deal for the purpose of emphasizing the major steps. Actually, purchase orders play a major role in the cost system and additional copies are routed through production control and cost accounting. A description of this process, however, is not necessary here.

In this chapter purchasing department records and procedures suitable for a medium-sized or large company have been discussed. It should be understood clearly, however, that the specific requirements of each concern naturally will necessitate changes from the methods here discussed. The main point that the office manager should constantly keep in mind is that efficient purchasing department organization and operation necessitate constant attention to details. Whether his responsibility is direct or only functional, the office manager should assure himself that the system used is adequate—and entirely practical—for the needs of his company.

## 14

# *Office Management in the Credit and Collection Department*

The main objective of good credit management is to assist the company to realize maximum profits from its operations and, at the same time, to minimize the losses. All assistance possible must be rendered the sales department in its efforts to open new accounts and to expand the volume of sales to the current accounts. However, unsound extension of credit will defeat this objective, since it can encourage over-expansion on the part of the customer and, very possibly, spoil a previously sound account. The granting of credit to unsound prospective customers results in losses to the company, and the efforts of the sales department in securing these prospects are wasted. Furthermore, the credit manager can promote good will by his diplomatic handling of delicate credit situations, thus assisting the sales department materially.

To attain such an objective, many decisions must be made daily and each one must be based upon facts. A refusal of credit based upon inaccurate reports is just as serious an error as the unsound extension of credit. The course of the credit manager must follow a delicate line, and the accuracy required makes an adequate system of reliable records essential to successful operation. The nature and extent of the records needed depend upon the type of business. Many department stores, for example, have only charge accounts, in addition to their cash business, and sell nothing on the installment plan. Other concerns sell on an open account and on installment, as well as for cash. Some organizations deal directly only with consumers; some, such as the Commercial Credit Corporation and the Universal C.I.T. Credit Corporation, deal with manufacturers, wholesalers, and retailers, as well as with consumers. Whatever the exact relationship may be, it should always be remembered that credit is a very personal matter. Conse-

quently, it is of the utmost importance that the record system be as nearly automatically accurate as possible. The honest person who pays his bills promptly when they are due resents nothing quite so much as to be told, through an error, that his bill is in arrears.

**"Project Credit Plan" of United States Plywood Corporation.** The following example serves to indicate the extent to which credit service may extend. It is unusual as far as normal business practices are concerned, but it does illustrate how the extension of credit may serve as a powerful sales weapon.<sup>1</sup>

If a man satisfies the corporation that he is of good character, and possesses or can command some skill in the use of its products, he is permitted to seek contracts from approved customers. He is then provided with the merchandise and, if necessary, the money needed to meet his payroll. The amounts to be involved and the number of jobs he may take depend upon the company's judgment of his ability and of the soundness of his projects. The help and advice of staff architects and engineers are provided by the company without charge.

Thus the man will have materials with which to work, money to pay his labor, and an assurance that he will come out with a profit if the project is handled efficiently. Once a contract has been secured, the customer makes payments direct to the contractor as the work progresses, and the company estimates the portion of each payment which must be returned to it to cover the materials supplied and the money advanced.

The contractor acts as the company's agent in collecting such sums, having executed an assignment form with it. To avoid embarrassment to the contractor, the assignment is not revealed to his customer, as it might interfere with his ability to get work in substantial volume. There is some doubt of the legal validity of such assignments if not immediately presented to the customers, especially as some business houses stipulate that no assignments may be made, but that is a chance which the company is willing to take because it has been found that the percentage of those who violate this type of agreement is small.

The "Project Credit Plan," incidentally, has been operating effectively since the depression of the 1930's, when many of the corporation's smaller accounts were unable to function.

Obviously, the successful operation of such a plan necessitates credit management of the highest order.

**Importance of office mechanism.** Smooth, swift, and efficient office operations are essential to good credit management. Pro-

---

<sup>1</sup> Anon., "Project Credit Plan," *Management Review*, American Management Association, November, 1944, p. 410.

fessor Albert F. Chapin makes this comment about the office mechanism:<sup>2</sup>

To describe a credit office system which may be adapted to more than a very small percentage of businesses is clearly impossible. But the importance of system is stressed. This embraces the most efficient mechanical aids, carefully selected and well-trained assistants, and a carefully planned routine. The saving of time is a cardinal principle in credit office management. The true executive does not permit himself to be hampered by inefficient office methods, or by details which can be shifted to an assistant. The executive is constantly alert for improvements in equipment, yet he guards his department against too much system. Red tape has no place whatever in a credit office.

Initial costs for new systems at times appear to be heavy, and yet the most radical installations sometimes will pay for themselves in a short time. The aggressive and successful enterprise does not hesitate to throw out either its machinery or office equipment when either becomes obsolete. Once the question "will the new equipment save time, labor, or space sufficient to cover the expense of installation" is answered in the affirmative, the executive can go ahead with confidence.

**Two types of credit operations.** Although the main objectives of all credit procedures are identical, there is a distinct difference in the procedures and systems used to accomplish these objectives in a manufacturing or wholesale house and in a retail store. In the former case, the credit is advanced upon the belief that the buyer will realize a profit from the handling of the purchase and repayment will arise from this profit. In the latter case, the credit covers items sold (consumer goods) or, perhaps, cash loaned, and repayment must come from income entirely unconnected with the product. The difference is important, for the sources of information regarding the credit risk vary between wholesale and retail credit and the records and procedures necessary to form a basis for the credit also differ.

**Records the credit department needs.** The nature of the records kept by the credit department depends to some extent upon the sources used by the credit manager to secure information about applicants for credit, or upon the nature of the applicant's business and the extent to which credit is granted. In general, the records maintained by manufacturers and wholesalers are more extensive than those of the retailer or loan company. Mercantile credit

---

<sup>2</sup> Reprinted by permission from *Credit and Collection Principles and Practice*, by A. F. Chapin, copyrighted, 1941, by the McGraw-Hill Book Co.

involves more detailed and more frequent investigations than does retail credit. Consequently, the volume of material to be organized is greater and the methods of using it demand a higher degree of systemization. The records discussed below are those frequently found in mercantile credit operations.

**Request for credit information.** When the sales department obtains a new customer, and frequently also in the case of a prospect, the first step in the granting of credit is to provide the credit department with the information it requires to make a credit decision. The request for credit information or credit data sheet is frequently used.

Fig. 39.—Credit Examination Sheet.

This record may be merely a form letter sent by the credit department, in which it is requested that both general and specific information be furnished regarding the applicant in question. If, for example, the proposed sale is to be made to an individual and involves less than \$100, all of which will be payable within thirty days, nothing more than personal and bank references may be required. On the other hand, complete financial statements, including both a profit and loss statement and a balance sheet, may be asked for, particularly if an installment sale involving a considerable amount of money is concerned. For example, a concern may wish to purchase \$50,000 worth of machinery or equipment, proposing to pay \$10,000 (20 per cent) in cash at the time of delivery, payment of the balance of \$40,000 to be spread equally over the next twelve or eighteen months. Under such circumstances the customer's ability to pay the installments obviously depends primarily upon his future earnings; hence complete information regarding his financial status is essential.

The form illustrated (Figure 39) serves the same purpose, but it is not sent to customers by the company that uses it. It is used to collect information when contact is made by telephone or when salesmen obtain bank references, and so forth, directly from the customer. It records the first contact with the prospective customer and is a work sheet from which information is later developed.

**Customer's credit file.** The customer's credit file, or credit information file as it is sometimes called, is the basis for all credit decisions in the mercantile field. It is usually a vertical file folder of letter size, housing all the material for one account. It may have a printed form on the front cover which contains an abstract of the material within it. The method of filing may be alphabetic, geographic, or numeric.

Such a folder would contain the request for credit information or credit data sheet, together with agency reports (Dun & Bradstreet, for instance), copies of the debtor's current balance sheet and profit and loss statement, confidential reports from banks and other vendors, and the important letters having a bearing on the customer's credit rating. It is the usual practice to retain these files permanently, for their value increases in proportion to the history which is built up within them. For this reason, letters and papers of limited interest, such as copies of collection letters, invoices, and monthly statements, are usually filed in a separate

correspondence file in order not to clutter up the credit file. The credit file is reviewed periodically, since business conditions are constantly changing. It is the usual practice to revise these files every six months or so, checking to make certain that the information regarding the customer is up to date. If any is lacking, current information is requested from the customer and from whatever other sources were used previously.

**Correspondence file.** As mentioned above, some firms maintain a separate correspondence file for general credit correspondence with the customer. In some cases the contents of this correspondence file is sent to the general file as fast as the credit department is finished with it. In other cases the correspondence file is reviewed periodically, obsolete papers are destroyed, and those which have developed permanent interest are transferred to the customer's credit file. In other cases no separate correspondence file is maintained and these routine letters are immediately filed in the credit file. Although, as was pointed out above, this has a tendency to add bulk to the credit file and make reference more difficult, it does have the advantage of centralizing all information about the customer in one file.

**Other records.** Most mercantile credit departments frequently find it necessary to refer to copies of invoices and to the customer's ledger. Both records, consequently, must be made available to the credit department, the usual practice being to locate the credit department adjacent to the accounts receivable section of the accounting department, so that these records will be readily accessible. When such coöperation between accounting and credit can be established, duplications of these records are unnecessary. In some cases, however, this arrangement cannot be worked out, and for this reason, or because he needs more detailed information than the accounts receivable will yield, the credit manager maintains a record of customer's purchases and payments.

**Record of customer's purchases and payments.** In a previous chapter dealing with the records of the sales department, mention was made of the customer's record card, the primary purpose of which is to record sales made to different customers. The credit manager needs substantially the same information, but he naturally carries the customer's relations with the firm one step further—that is, until the goods have been paid for.

The record of customer's purchases and payments usually has three main columns, one for purchases, one for payments, and the

third for balance due, if any. Under each of the first two main columns there are a number of subcolumns for entering such information as the order number, date of the order, value of the order, date when payment was due, date when payment was actually made, explanation of late payments, and so on. A separate series of entries may be made for each order, or all information may be shown on a monthly basis, depending largely upon the nature of the business. The customer's record of purchases and payments should not be confused with the ledger account, which is merely a list of debits, credits, and reference numbers and cannot give such complete information about the relations of the company with each customer. Neither is the customer's record of purchases and payments expected to serve as a record of collections received from customers whose accounts are past due. Its purpose is simply to give a clear picture of the paying habits of the firm's customers.

Procedure in granting credit. As pointed out previously, no two offices handle credit details in exactly the same manner. The general routine, however, is somewhat similar. In most cases orders from present customers take precedence over any other activity of the department. In considering a customer's order, if orders from him have been filled frequently, a decision may be made without reference to the files because of familiarity with the account. The size of the order may also influence this, as a small order may be approved with little or no investigation. It is generally necessary, however, to refer to the credit file to see if the account is in good standing and to the accounts receivable ledgers or to the record of customer's purchases and payments in order to determine whether this order will exceed the credit limit. Since one of the most reliable sources of information about any customer is experience with him, the credit manager will be favorably or unfavorably inclined according to the nature of that experience. No firm rules can be established, but the following indications are of extreme interest to the credit man:<sup>2</sup>

1. Account past due. This is the commonest occurrence.
2. Cash discount taken after time allowed; evidence of dishonesty.
3. Check for less than amount due, marked "paid in full." This must be handled carefully.
4. Delay in presentation of claims for shortage, damage, or defective quality.
5. Cancellation of orders or of parts of orders.
6. Unusual volume of credit inquiries from other houses about this customer, especially on first orders.
7. Abnormal increase in number and size of orders.
8. An unusually large order from a slow-pay customer who has recently been paying promptly.
9. Fire under suspicious circumstances. To the credit man, no fire is "successful."

In general, if the ledger experience is favorable, the order will be passed. If any doubt arises, a complete study of the customer's credit file will be made before passing the order.

**Handling new business.** In most cases, the credit manager or his assistant will want to see orders for new business and after examining them will indicate what information should be secured. A clerk is instructed to obtain this information, which may include mercantile agency reports, bank information, financial statements, and statements from other vendors. The degree of completeness of the check-up will depend to some extent upon the size of the order. When this information is obtained, a customer's credit file is set up for the account and future orders from this customer are handled as indicated above.

**Collection of accounts.** The function of collection of accounts is most important and has a distinct bearing upon the success of the entire credit operation. Although accounts are expected to be paid when payment is due, in practice some sort of demand is frequently necessary to insure payment. This demand may range from the monthly statement which is automatically sent when payment has not been received, to the threat of a law suit, the degree of severity of the reminder depending upon the length of time the account is owed and the attitude of the customer. The meticulous follow-up of unpaid accounts, even beyond the period of the statute of limitations, frequently pays, as the following examples indicate:<sup>4</sup>

---

<sup>4</sup> Mikesell, J. B., "Dollars in Past Due Accounts," *American Business*, January, 1945, p. 20.

is not paid by a certain date, it will be turned over to an attorney or collection agency.

**Collection card.** The essential record of the collection division is one which shows the exact status in the collection process of all past-due accounts. A record often used for this purpose is a simple collection card. A separate record is kept for each customer. The top of the form provides for the usual information, such as name, address, and so forth. The body of the record provides for entering the various notifications, requests, and letters sent to the customer. One method often used is to assign a number to each such letter or request and print it on the form itself. As the notices are sent out, the date on which each is sent is entered opposite the appropriate number. In order to make possible an automatic follow-up of any given account at a definite future date, a series of numbers, 1 to 31, each indicating a day of the month, may be printed across the top of the card. Thus if notice No. 2 is sent

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30

out on the tenth of the month, and it is desired to send notice No. 3 on the twenty-second, provided, of course, that payment has not been made by that time, a tab may be put over the number 22 at the top of the card. The card can then be filed with the other collection cards in the regular way, but will automatically be brought to the attention of the collection follow-up clerk on the twenty-second. Figure 40 shows a typical form of collection card.

An important part of a systematic procedure for handling collections is a definite plan of coöperation between the collection and accounting departments whereby notice will be sent promptly to the collection department just as soon as money is received from an account. In smaller concerns this is often handled by sending all checks, as soon as they are received, directly to the credit and collection department. Here they are posted at once to the Customer's Record of Purchases and Payments, after which they are turned over to the accounting department for entry and deposit. In large companies the accounting department may prepare a daily summary of all payments made on accounts receivable. If some such plan is not followed, confusion within the organization

will result, as well as ill will on the part of the customer, if he receives a collection letter covering an invoice or bill that he has already paid.

Retail credit. Inasmuch as credit management is based on an estimate of the customer's ability to pay for the merchandise from income other than that derived from the use of the article, the procedure used in establishing a basis for credit is slightly different. The retail credit manager has at his command the use of a number of credit agencies specializing in investigations of individuals. The Retail Credit Company is a national agency organized to assist the credit managers of retail stores, installment houses, small loan offices, and so on. Nearly every major city has a credit bureau from which all the subscribing department stores may obtain credit information quickly. This is important, because frequently customers desiring to open charge accounts wait in the store until the credit is cleared. An example of the efficiency with which these organizations operate is illustrated below:<sup>5</sup>

Here's how the Credit Bureau of Greater New York, Inc., one of the largest credit information agencies, enters the picture when a customer goes into a department store to make a purchase and says, "Charge it."

The customer's name is written by the store credit manager on a Tel-Autograph transceiver connected with the Credit Bureau's main office. Credit rating of the customer is then flashed back to the store and the purchase is okayed. The Bureau rarely takes more than 11 minutes to give the required information.

About 3,000 requests of this type are received daily. With the increase in installment buying, it is anticipated that the number of inquiries handled each day may reach 7,000. To handle this heavy demand for quick credit inquiries, the New York Bureau has 11 telephone lines and 41 TelAutographs.

Today there are approximately 33 New York stores using this service for immediate transmission in writing of credit analyses.

Records used in retail credit management. In general, the heart of retail credit management is the accounts receivable ledger, which is usually designed to include a system that will immediately call to the attention of the credit manager any account upon which payment is not received. In installment selling, the conditional bill of sale or purchase agreement forms the legal basis upon which the retailer may collect his money, and this, of course, is filed away carefully; but the activity of the account is checked

<sup>5</sup> Anon., "System Speeds Credit Information," *American Business*, October, 1946,  
p. 36

from the ledger generally according to the scheduled payment date. As soon as that date passes without payment, the account is followed. The following example indicates how the American Trust Company keeps track of its installment loans.<sup>6</sup>

Recognizing the trend in commercial banks toward the acceptance of all types of consumer credit, we established in 1935 a special department to handle this kind of business in our bank. Formerly we had granted instalment loans to individuals as personal loans and automobile loans but had carried them in our commercial note department; the impetus given instalment lending by the introduction of FHA Title I soon expanded our volume to the point that a separate department became a necessity.

Our bank has over sixty offices and when we first transferred our instalment loan business to a separate department within the bank, each office was permitted to carry over to the new operation such features of their commercial loan operation as they felt desirable. Because of the wide variation in volume and types of activity, many radically different systems of posting developed, ranging from hand posting in smaller offices to machine posting in those offices having a greater volume. In the Berkeley office we simply carried over our commercial loan method of posting each loan card by hand. Although this worked satisfactorily for a short time, it soon became apparent that it was inadequate to handle our volume of business. Numerous efforts were made to improve this system but by 1940 the volume had increased to the point that an immediate change in our entire posting system became necessary.

Our problem in Berkeley was not unique, as nearly every other office had experienced the same growing pains. A committee was appointed by our Head Office in San Francisco to make a study of the various systems in use throughout the country. It was decided that whatever system appeared to be the most useful would be installed at our office on a trial basis. We were selected for this trial because the volume here was not so large as to make an experiment dangerous but still large enough to act as a proving ground for a system which might have to handle a volume of business many times larger. It was also determined that, should the system operate effectively at the Berkeley office, it would then be installed uniformly throughout all of our offices.

Fig. 41.—Installment Loan Record. Credit posting requires only the use of a rubber stamp. A colored signal instantly warns of delinquent accounts.

the payment book and results in a considerable saving of time and postage. The coupon becomes a credit entry to be run through our batches, and is then used by the bookkeeper in posting the payment on the ledger card. The coupon book contains appropriate instructions as to where and how to make payments and shows the date each payment is due. Of course, payments are occasionally tendered without the coupon book, but an index file, arranged alphabetically, provides a quick cross-reference to the account number.

The ledger card cabinets used are stationary, certified fire-resistive, and are provided with locks. As a result it is not necessary to move the ledger cards into the vault at night and we save not only the labor involved in this process but valuable vault space as well.

After five years of operation we have found this system to be entirely satisfactory. Our analysis indicates that one bookkeeper can handle approximately 5000 accounts, including the handling of routine delinquency notices. This high efficiency can be translated into terms of low operating cost. As a result of our satisfactory experience in this office, this system has been designated as the standard system throughout the bank.

**Summary.** In determining the records and the record-keeping procedure needed by a credit and collection department, too much emphasis cannot be laid on the fact that a systematic plan of procedure which will result in both promptness and accuracy must be worked out and maintained. Obviously the effectiveness with which this department is operated has a very direct bearing on the status of the working capital account of the company. In the opinion of many financial authorities, the maintenance of a proper working capital fund may spell success or failure for a business. Only by having an adequate system of record control in the credit and collection department will the greatest effectiveness of operation be secured.

# 15

## *Branch Office Management*

Although branch offices often deal primarily with sales matters, the office manager frequently has many direct relations with them. In some concerns he has direct line control of the office work at all branches. In other companies the general office manager at headquarters is responsible for standardizing the office work at all branch offices, even though the local office managers report directly and only to the branch managers. And even in those organizations in which the general office manager has neither direct nor functional responsibility or authority for branch office work, he still must deal constantly with branch office reports and records as they affect the work of the main office. Thus, whatever the specific organization relationship between headquarters and the branches may be, branch-office management is an important part of the work of the average office manager.

Relationship of the office manager to the branch offices. Occasionally, studies of the relationship of the office manager to branch office operation have been made, but in most cases the results are not subject to clear interpretation and do not yield definite conclusions because practices seem to vary in different industries. Then again, the lack of definition of the home office manager's duties in industry as a whole seems to add to the difficulty of such studies. In general, very few business concerns give the office manager complete control of the branch offices. His role is advisory in most cases and frequently he has neither complete nor advisory control. Whatever trend there is seems to be toward decentralizing all functions which can be transferred out of home offices and toward placing the authority and responsibility for their operation as close to the point of operation as possible. This makes for a relaxation of complete and partial line control but strengthens the opportunity for advisory control by home offices and the benefits of specialization which advisory control brings.

Systems and procedures can be analyzed and improved by specialists who are not burdened with line responsibilities. In turn, a line supervisor at the branch office need not neglect current operating problems in order to plan office operations or procedures. He has the benefit of using the staff specialist whenever he wants to.

**Classification of branch offices.** Branch offices may be classified as follows:

1. Those that function as independent units, such as subsidiary companies operating in foreign countries. In this case one usually finds a complete unit comprising a factory, sales offices, and offices of other departments. If the branch is incorporated, all the transactions incidental to a complete corporate unit are present.
2. Branch sales offices where a specified territory or area is assigned for the distribution of the product. Here is found a complete branch unit—merchandise is purchased from the home office (at least theoretically); sales are made; customers' accounts are kept and collected; cash is banked and the expenses incidental to sales are paid; and the balance of cash is remitted to the home office. Such a branch may have sub-offices, in which case this type of branch takes on the complexities of a complete commercial unit.
3. In some cases the branch is a combination of agency and branch, the goods being shipped on consignment and the manager being treated as an agent or dealer who owns the business (at least theoretically). In this case accounts receivable are kept at the home office.
4. A retail store where goods are sold for cash or credit or both. Income is remitted currently to the home office, where all expenses are paid, excepting petty cash disbursements. Here the main responsibility of the branch office is the custody of the goods and accounting for the proceeds in cash or credits.

5. Finally, there are combinations of any two or more of the foregoing. Consideration has not been given to factory units, which in some instances may be regarded as branch units.

**Types of branch office organization.** A frequent criticism of branch organizations is that they tend to kill individual personality and effort. Thus, a local organization often is more effective from a sales standpoint than is a branch of a national company. To offset this, however, line control is sometimes used, the managements feeling that to give a man rather complete and sole authority within his sphere as to policies, execution, and review offsets the "cog

in the wheel" feeling. In a nation-wide company, however, line control is not always practical. Local conditions vary widely. Often there are totally different methods of handling the details of the business. Even vital policies are often administered along different lines, even to the extent of price variations, to say nothing of general company policies such as credits and collections, merchandise returns, pay rates, hours, and vacations. A purely functional organization, on the other hand, often makes discipline difficult. Lines of authority and responsibility are not fixed, with the result that friction may develop. A line and staff organization tends to breed committee action, and this may lead to constant conferences and slowness or indecisiveness, which often are associated with committee action.

A combination of line and functional control often works well. Most companies cannot afford to maintain technically or highly trained and experienced practical men in the individual branches, or even in groups of branches. Expense is all-important. Therefore, the home office, or, perhaps, certain major district offices, may maintain an organization to which these experts belong. Thus there exists a functional organization, at least in part. To maintain discipline and to insure execution of the functional director's policies, however, there must be line chiefs.

#### BRANCH OFFICE OPERATION OF LIBERTY MUTUAL INSURANCE COMPANY<sup>1</sup>

The secret of successful branch office supervision depends upon the maintenance of a proper balance between home office control and branch office freedom. Top-heavy control hampers branch efficiency and service to customers. Unrestrained local freedom results in lack of uniformity of methods and often in extravagance.

Our home office is in Boston and has a personnel of about 1,500. We have more than 100 branches located in the principal cities of the country. We also have offices in Honolulu, the Canal Zone, and Manila. Our branches vary in size from small offices having but a few employees to offices having several hundred. Our office in Rockefeller Center, in New York City, is our largest branch and has a personnel of about 600. Such great differences in size make standardization of methods difficult. Office equipment must vary in accordance with the size of the job performed. The competency and experience of supervisors must increase as assignments become more complex. As an office grows, we add more functions. This complicates our management problem and makes uniformity of practice very difficult. Because of the nature of our business, the functions of our offices vary; for example, some write

<sup>1</sup> Atwater, C. B., "Improving and Standardizing Branch Office Methods," *Office Management Series No. 96*, American Management Association, New York, 1941, p. 14.

bi-annual office management conference held in Boston. At these meetings we ransack from top to bottom our office management policies, methods, and problems. Arranging programs for these conferences requires several months, but we consider that the time is very profitably spent. These conferences are now an indispensable part of our effort to promote progress and uniformity.

### REGIONAL CLERICAL SUPERVISORS

About a year ago we selected seven young women who had outstanding records as clerical supervisors in our branch offices and appointed them Regional Clerical Supervisors. The average length of their company employment was nine years. After a week of special training in the home office, they were assigned to assist the regional office managers.

Their duties are as follows:

1. They are sent to assist temporarily in offices in which emergencies have arisen.

2. They make regular inspections of branch offices. These inspections are quite similar to those made by the regional office managers.

3. They are expected to become specialists on branch methods. Their training and past experience enable them to deal authoritatively with all clerical procedures. Because of their close contact with methods, they help in simplifying and standardizing procedures.

We used great care in selecting these Regional Clerical Supervisors, and each has proved to be eminently successful. They are most enthusiastic about their jobs and their activities have been enormously helpful, so much so that I have had no difficulty in securing budget to add more to the group.

So that I may be in sympathy with branch office problems and know by personal contacts that the work of our department's field organization is successful, I make rather extensive trips. These visits have enabled me to acquire on-the-ground appreciation of the value of this project. On the way to the coast last spring, I visited our Houston office. This is a small branch office with four men and four clerks. Because of illnesses and a resignation due to marriage, the office suddenly found itself with but one clerk, and a rather inexperienced clerk at that. A Regional Clerical Supervisor was dispatched by plane from Chicago, quickly arrived on the scene, and when I visited the office she was busily engaged training the new clerks she had just hired. In the meantime she was keeping up the most essential work. Many other examples can be given of the value of these Regional Clerical Supervisors on emergency assignments, but I want to describe another important part of their work.

Our regional office managers have been making two inspections a year of branch offices in their territories. Several of these men have so many offices under their jurisdiction that they have found it difficult to give proper time to inspections. We consider these inspections very valuable, for through them we are able to know whether the branch is conforming to standard practices and operating efficiently and to apply remedies where needed. The addition of the Regional Clerical Supervisors has

has to do with the actual handling and storing of the products.

The controller and the general sales manager establish the policies and, after the approval of the chief executives, they see that they are carried out. The controller, while maintaining no direct authority over the branch managers, does stipulate the methods to be used in preparing customers' invoices and maintaining stock records. The general sales manager's chief concern, of course, is the volume and types of business produced by the various branches.

Each branch of this company "buys" its merchandise from the various mills, stores it for quick service, and distributes it as the customers require. Each branch is a selling office, and no attempt has been made to make an office manager out of the branch manager. Instead, there is an office manager at each location whose duty it is to see that the office work, which includes the invoicing mentioned above and the maintenance of stock records, is handled according to the directions issued by the controller through the general sales manager.

The customers of this company buy many items which cannot be carried in stock; for this reason, orders are placed on the various mills (through the general offices of the company) and shipments are made to the customers directly from the mills. Because of the complexity of the specifications appearing on such orders, order writing is one of the chief concerns of the office manager and a good portion of his time is spent in supervising this work. Each office manager is acutely conscious of the fact that sales orders incompletely or inaccurately drawn up adversely affect customers' service. For this reason, each of them is most particular that this phase of the work be done correctly.

In order to make certain that the methods used by the branches conform with the regulations issued by the controller and the general sales manager, inspections are made at regular intervals, sometimes by the traveling auditor, sometimes by a representative of the sales department, both of whom are familiar with the approved procedures governing the accounting, sales, and stock functions. In addition to this, formalized bulletins and operating manuals are issued and kept current, so that all branch and office managers may be aware of additions and changes to procedures.

**Branch office methods of the Retail Credit Company.** The Retail Credit Company is a corporation furnishing information on individuals for various purposes, such as insurance underwriting and claims, the extension of credit, and pre-employment check-ups.

The reports are primarily character reports covering moral hazards and other factors pertinent to the transactions under consideration. The company has been in business since 1899, covers North America, and has worked out a very definite system of branch office control. This is necessary because customers may request reports from any or all of the branch offices. The service must carry certain standards and a uniformity that stamp it as Retail Credit Company service, irrespective of whether it comes from Maine or Texas, Quebec or Hawaii.

Each branch office is responsible for results and service in its territory. These territories are drawn by state, county, or provincial lines. One office does not overlap the territory of another. There are 117 branch offices varying in size from a personnel standpoint, with an average personnel of 34 per office. The primary function of the branch offices is to render satisfactory service on the reports requested of them. Selling is done largely by specialized personnel.

**Accounting.** The branch offices do no bookkeeping whatever. Each day the results of the day's operations are sent in to the home office, where credit is given for the business completed and charges against customers recorded for billing purposes. All regular expenditures, such as rents, towel service, and so on, are taken care of by the home office accounting department. Practically all bills are approved by the branches and sent to the home office for payment. All salaries and fees are paid by the home office. All billing of customers and collections are handled from the home office. Central bank accounts are carried in New York and Toronto on which any manager can draw if necessary. The branch offices, therefore, do not have a revolving cash fund.

**Supplies and space.** All stationery and office supplies are furnished from the home office. Printing and other materials are uniform throughout the organization. Furniture is standardized and purchased either by the home office or by the branch manager under specific instructions as to the standard. Office space also has been standardized to a large extent. Experience has determined the shape of office that best suits the work and the number of square feet needed for various types of employees. By forecasting the approximate volume of business a year or two in advance, the company is able to operate with a minimum amount of space and expense.

**Organization supervision.** In order to keep the service uniform and standard, close control is exercised. All branch offices are grouped into ten divisions. Each division is headed by a field executive (division manager) who is responsible for getting results through the managers in his group of offices. Four of these division managers are residents at the home office; others live in their territory. Operating vice-presidents to whom division managers report are responsible directly to the president.

**Standardized procedure.** All clerical details are carried out in a standardized way, although actual motions need not be standardized except in a few instances. The objective is to have the results standard. For example, all files are operated in the same way in each branch office, and all notations and symbols on work in process are the same. Employees are required to do their work according to the standardized plan, even though they think some other way is better, until the standard is changed. In addition to providing standard service, this practice facilitates the transfer and relief of branch office personnel when necessary. It is possible for a new branch office manager to take over a branch office, or for personnel to be transferred to a branch office, and become effective immediately.

The number of persons in all branch offices of a certain size is standardized. It has been established just how many employees of each type are required to handle a certain volume of business. Branch managers, therefore, know in advance by reason of the estimates of business the number of employees they will need. Each job in the branch office is covered by an instruction manual. The new employee studies this manual and the office always has it as a source of reference. An educational division in the home office prepares the manuals, which are loose-leaf and are kept up to date as details or instructions are changed.

**Training.** The educational division in the home office operates correspondence courses covering every branch office job. It is possible, therefore, for branch office personnel to study by correspondence the jobs to which they aspire in the branch office. In addition, training schools for branch office managers and for other personnel are operated at the home office. The employees to be trained in such schools are selected by the branch office and division managers, and they may come to the home office for a period of a week or more for purpose of special training. On com-

pletion of training schools, the men go out, some as branch office managers, some as relief men, and others as specialized inspectors or special representatives of various kinds. Branch office managers are held responsible for the development of their own employees. Promotion of branch office managers is the responsibility of the division managers and the home office executives.

**Morale.** Harmony is maintained between the home and branch offices by extensive travel in both directions. Division managers, home office department heads, and officers visit the various branch offices frequently. Also, branch office managers are brought into the home office periodically for visits of a week or more.

# 16

## *The Office Manual*

In large organizations a standardized yet simple and inexpensive method of informing employees about company policies and rules, and of giving them specific instructions regarding their own duties, is essential. This is the primary purpose of all office manuals.

Innumerable large organizations, such as Westinghouse Electric and Manufacturing Company, Jordan-Marsh, Metropolitan Life Insurance Company, New York Telephone Company, Graton and Knight Manufacturing Company, Irving Trust Company, Dennison Manufacturing Company, and R. H. Macy and Company, have used manuals successfully for years. In addition, many smaller concerns engaged in a wide variety of businesses find the use of manuals well worthwhile.

A manual used in 1856. The fact that manuals have been used for years is interestingly illustrated by the following *Rules for Employees* which was brought to light during the celebration of the eightieth anniversary of the Carson, Pirie, Scott and Company store in Chicago. The rules for employees of the first store read as follows:<sup>1</sup>

Store must be open from 6 A.M. to 9 P.M. the year around.

Store must be swept; counters, bases, shelves and showcases dusted. Lamps trimmed, filled and chimneys cleaned; pens made; doors and windows opened; a pail of water, also a bucket of coal brought in before breakfast (if there is time to do so) and attend to customers who call.

Store must not be opened on the Sabbath unless necessary, and then only a few minutes.

The employee who is in the habit of smoking Spanish cigars, being shaved at the barber's, going to dances and other places of amusement, will surely give his employer reason to be suspicious of his integrity and honesty.

Each employee must pay not less than \$5 per year to the church and must attend Sunday school regularly.

---

<sup>1</sup> Life Office Management Association Bulletin, p. 4, March 15, 1936.

Men employees are given one evening a week for courting and two if they go to prayer meeting.

After 14 hours of work in the store, the leisure time should be spent mostly in reading.

Advantages of using manuals. Several advantages accrue to organizations that make use of office manuals:

1. The manual serves as an excellent medium whereby new employees may be trained. A Chicago concern, for example, reports that it reduced the time and cost of training employees from 60 to 75 per cent by the use of manuals.

2. The use of manuals recognizes the "put-it-in-writing" principle. Reference has already been made in a previous chapter to the increasing adoption of this principle. The office manual is a specific example of why and how positive, definite information regarding company rules and policies, as well as the duties of each employee, may be put in writing.

3. When instructions are reduced to writing, in manual form, employees cannot evade the responsibility of knowing what the manual contains. The office manager who does not have manuals in use is continually faced with the new employee's statement that he did not remember what was said, or that he misunderstood the instructions given him. When verbal instructions regarding duties or rules are given at the time of employment, these two excuses never can be satisfactorily refuted. If, however, manuals are prepared and given to new employees at the time of their employment, and if new workers are told that they are expected to read the manual and will be held responsible for a knowledge of its contents, a troublesome problem can be avoided.

be most unsatisfactory. A manual setting forth present procedures clearly and specifically gives an excellent basis upon which to eliminate inconsistencies and reduce wastes resulting therefrom. Furthermore, its preparation forces the determination of the easiest, surest, and the most productive way of getting things done, the way that has been proved best by experience and study. By establishing and recording that method, the manual makes it the habitual way.

6. By telling each individual to whom and for what he is responsible, manuals define responsibilities and prevent errors. Their preparation brings to light error-breeding situations that can be corrected. The effect is to decrease misunderstandings and errors, and to move work along more smoothly and more rapidly.

7. Change and growth sometimes bring about overlapping of departmental functions, while at other times they create gaps between them. The attention necessarily given to the definition of duties and responsibilities in the preparation of manuals leads not only to a better and more accurate dovetailing of departmental responsibilities, but also to their more complete coördination.

8. If the initial preparation and later revision of a manual is made a coöperative effort, with the chief burden for its effectiveness placed where it belongs—on the man responsible for getting out the work—it becomes a powerful incentive for constructive thinking. Every business needs men who can think originally and progressively. Such men, to a certain degree at least, have to be made to order. Their discovery and development is in itself an important job that will be furthered by systematic efforts to establish correct practice.

9. Last, but by no means of least importance, it should be remembered that matters that may be entirely clear to the trained or experienced person are not necessarily so to one just entering the organization. Furthermore, fitness as an executive does not necessarily include fitness as a teacher, and, as a result, explanations of methods of doing work may not always be entirely clear. The preparation and use of a manual overcomes such difficulties.

Objections to manuals by employers. When the preparation of an office manual is proposed by the office manager or others, objections are sometimes raised by employers and employees. It will be worthwhile, therefore, to summarize the more usual objections and to comment briefly on each:

1. "Too much red tape." This is an objection often raised

against any innovation. Any change from traditional methods is frequently looked upon in this light. While not all changes are improvements, the establishment of standards is a distinct step forward. One might with equal logic, or, more correctly, with equal lack of it, urge that a change from single-entry bookkeeping to a double-entry system involved *too much red tape*.

2. "Costs too much." It cannot be denied that the introduction of standards usually involves some expense. However, just as in the case of the introduction of a cost accounting system, or as in the case of a move from one office location to another, the work of standardization should be regarded as an investment which, while possibly somewhat expensive in initial outlay, is one that will yield excellent returns.

ance of employees restrict individual initiative. Office manuals and written practice instructions are merely rules and suggestions governing certain activities. Viewed in the proper light, they are distinct aids by which the employee is helped to do better work. Moreover, it should be borne in mind that anyone who has constructive suggestions for improvements in methods usually has an opportunity to make them. It has been the experience of many office managers that those who urge the point about restriction of initiative most vigorously are the same ones who have the least to contribute in the way of constructive suggestions for improvement.

2. "More efficiency methods." This is frequently the cry of those who are content to "get by" with doing as little work as possible, and who see, in the introduction of standards, a device whereby they will be forced to measure up or else be marked for dismissal. Those who are unwilling to coöperate should be eliminated.

Kinds of manuals. There are four principal kinds or types of manuals in use in business organizations:

The general information manual. Such a manual usually contains information regarding the history and growth of the company, the kinds of goods or services that it sells, promotional policies, and other material of a general, informational character.

The office rule book. The office rule book is often combined with the general information manual just mentioned. Office rule books are widely used. Such subjects as the time and method of paying employees, holidays observed by the company, rules regarding lateness and absence, lunch hours, and other company regulations with which the new employee should be acquainted, are clearly and specifically set forth. Often such rule books also contain more or less detailed information regarding the personnel and welfare activities that are carried on in the interest of the employees. If, for example, a coöperative store is maintained, or if a company lunch room is operated, the rules governing the use of these facilities by the employee will be given.

Departmental standard practice instructions. Such manuals contain concrete and specific information regarding the work of the department in question, the relation of the department to other departments, the way in which the work of the department is carried on, and other information of a similar nature. The outstanding characteristic of such manuals is specificity.

Individual instruction sheets. In large concerns, where a high

degree of specialization of work by individual employees is possible, departmental standard practice instructions sometimes are further broken down into desk sheets or instruction sheets for each individual employee or small group of employees. Thus there may be a departmental standard practice instruction manual covering the work of the mailing and messenger department as a whole. In addition, however, individual instruction sheets may be prepared for each employee, showing exactly what his duties are throughout the day, and coördinated with a definite time schedule.

Office manuals at the Owens-Illinois Glass Company.<sup>2</sup> This company uses three separate office manuals to bring to its employees the information needed on the job. "YOU . . . And Owens-Illinois" is the title of the induction manual which is presented to each new employee.

How to prepare a manual. Many different methods are used in preparing manuals for office employees. A method very frequently followed when starting the preparation of a manual is to gather together copies of booklets or individual memoranda, which have previously been issued, containing instructions to particular departments or employees. These may indicate a starting point, at least, for an outline of present practice. The next step is to study in detail the work of each department as it is now being conducted and to outline the present practices in writing. Following this, changes should be considered carefully and, if they are approved, incorporated in the new manual of instructions. After the work of a single department has been studied and written up in this way, the preliminary draft is submitted to the department head for consideration, possible changes, and final approval. The revised draft is then prepared in its final form. Before it is distributed an adequate index should be prepared, so as to make the manual most conveniently usable.

In an office of moderate size it may be most economical to have only one copy of the manual for each department and to have this kept by the department head or his assistant for use by the subordinates if the need arises. Physical factors also must be considered in preparing the manual. If only a few copies are needed, typed sheets may suffice. If a larger number is required, they may be duplicated or printed. In any case, experience shows that, with the exception of the history and policy manual, and possibly the office rule book, the best results will be secured by preparing the manual in loose-leaf form so that changes may be made easily by substituting one page for another.

Office manual plan of Hardware Mutuals.<sup>3</sup> The evolution of the office manuals of this company illustrates one approach to the problem of manual preparation.

*Pocket size manual.* The first edition was a pocket size manual. In it we confined ourselves to a history of our companies, office hours, vacation allowances, sick leave allowances, how to prepare telegrams, how to get service from the Filing Division, and the usual general material found in office manuals. We were interested in having the people in offices outside of Stevens Point follow as closely as possible the customs and practices of the Home Office. We felt that only through the printed word would we be certain that our people had a definite record of what the Home Office wanted them to have.

<sup>3</sup> Willett, K. B., "Recording Simplified Procedures," *Annual Proceedings, National Office Management Association*, 1944, p. 55.

As we continued to grow, and opened more and more offices, and added new lines of insurance, we found it desirable not only to expand our office manual but also to furnish our people with written instructions covering the procedures on specific jobs and specific lines of insurance.

*8½ × 11 manuals.* Although we have come a long way from our original pocket size manual, we have maintained a number of the original features. The loose leaf system started in 1926 is still in vogue. The general layout is much the same. We have approximately 57 general manuals prepared by the Home Office for the guidance of our field offices. We have about 25 manuals and handbooks covering Home Office jobs. We have another 25 local manuals pertaining to local situations in our field offices. In addition we have what is known as the Master Index to our manuals.

*Master Index.* This Master Index is an important feature in our system. Through such a device it is easy to locate the manual in which a particular problem is covered. Suppose, for example, a question arises concerning the rates of dividends on different types of casualty insurance coverages which we have paid to our policyholders each year since organization. A new employee can easily and quickly locate the individual manual carrying this subject. All he needs to do is to refer to the Master Index to find the name of the manual in which the subject is covered. Then, by referring to the specific manual, the subject will be found. Each individual manual has its own index.

*Editing of manuals.* The majority of our manuals are either written or edited by our Standard Practice Division, which is under the supervision of a Standard Practice Manager, who reports to the Vice-President in charge of Office Management.

Manuals prepared by the Standard Practice Division cover the work of our various service units, such as Filing, Stenographic, Calculating, Duplicating, and Policywriting.

Manuals written outside of the Standard Practice Division and edited in the Standard Practice Division deal with Underwriting, instructions to salesmen, adjustment of claims, and others.

*Local manuals.* We also have local manuals prepared in the field offices. We find our local manuals a very important adjunct to our regular manual system. We know that each part of the country has its own problems, and that no one in our Home Office in Stevens Point could satisfactorily describe all local conditions.

We place the responsibility for recording the standard, or proper way of handling local problems, in the hands of our field offices. The Home Office merely receives a copy of each of the local manuals in use.

*Distribution of manuals.* Control of the distribution of manuals rests in the Home Office, where master records are kept. These records show the number—quantity—of any manual turned over to a field office. Individual employee records are kept in the field offices. The latter are kept to facilitate the distribution of revisions. Also, these employee records are maintained so that, at the time an employee is transferred or

leaves our companies, we know the manuals charged to him and can secure them before he actually leaves.

The distribution of new manuals and manual revisions plan is to have one individual in each office responsible for keeping the manuals in that office up to date. We have found by experience that we cannot hand correction pages for a manual to employees and expect them to keep their own manuals up to date. Too often they will put off placing the new material in the proper place. With someone responsible for this work, we are in a better position to guarantee that our manuals are kept up to date.

Whenever we place correction pages in a manual held by an employee, we give him a notice of the pages corrected, and leave with him the old pages for destruction. A sample notice is shown as Figure 42.

Fig. 42.—Manual Change Notice.

It should be kept in mind that in our companies there are relatively few complete manual sets in use. We have one complete set in each of our large offices for general use within the office. But the individual employee has only those manuals which directly affect his job. A secretary would have a Stenographic Manual, and a policywriting supervisor a policywriting manual.

*Preparing new manuals.* The Stenographer's Manual will illustrate how we draw up the first edition of a manual. What we did was no different from the practice usually followed by other companies. Someone in our Standard Practice Division made an outline of all the items we wanted to pass on to our stenographers as guides, or standards, in the handling of stenographic work. The original list included a description of how to set up a letter on one of our letterheads, the various salutations, the standard complimentary close, and other routine stenographic requirements. From this outline we wrote the various chapters for the Stenographer's Manual and released it to those affected.

After these stenographic instructions had been in use for a while, questions or problems came up which were not answered in the original draft. As a result of these questions, decisions had to be made, and we secured additional material for future editions or revisions of the Stenographer's Manual. This practice has been followed in the preparation of other manuals.

*Manual layout.* We follow a standard plan in the layout of manuals. Each has a title page, authorized distribution page, foreword, table of contents, index, text and exhibits. Each manual is broken down into chapters, and each chapter carries its own breakdown of page numbers. We can expand the number of chapters in a particular manual as revisions are required. We can add and take away pages from one chapter without affecting the page numbering of other chapters.

Like many other companies, we use the Dewey Decimal System. Each page in Chapter I starts with Digit No. 1, the first page of Chapter I being 1.01, the second page, 1.02. In Chapter II the first page carries 2.01 and the second page 2.02. If, at any time, a correction or addition is necessary between pages 2.01 and 2.02, we merely insert a page carrying 2.011.

Our manuals are mimeographed, dittoed, or printed, depending on the quantities required and whether they are to be used outside or inside the office. Salesmen's Manuals are printed; Underwriting Manuals are mimeographed. Both sides of all manual pages are used.

*Revision schedule.* We have a regular schedule of manual revisions. Frequency of revision depends on the type of manual. Some must be revised weekly, some quarterly, some semi-annually, and some annually. The Standard Practice Division is responsible for keeping a record of the revision dates and for seeing that the revisions are made according to schedule.

*Revision material.* To accumulate material for the revision of our recorded practices, our Standard Practice Division has a folder on each manual. In these folders material is kept to be included in a manual at its next revision. In every instance the material will cover items on which decisions have been made.

*Historical records.* When manuals are revised, all the old pages are destroyed, except those held by our Home Office Library. In the Library we keep one copy of all obsolete pages as a permanent historical record. We intend to place this historical record on microfilm to conserve filing space.

## SAMPLE PAGE OF A HARDWARE MUTUALS MANUAL

### CALCULATING MANUAL

1.01

#### I. Introduction

##### A. FUNCTION OF CALCULATING DEPT.

The Calculating Dept. of a No 1 Office, as an important and integral service unit, handles work for nearly every other department in the No 1 Office. Although the most important duty of the No 1 Calculating Dept. consists of calculating premiums on the insurance policies issued by our Company, various material for other No 1 departments is also handled. By having a centralized Calculating Dept., the necessity for the maintenance of calculating machines (Comptometers) in other No 1 departments is eliminated and the definite responsibility for calculating is assigned to one place.

##### B. RESPONSIBILITY OF CALCULATING DEPT.

The No 1 Calculator is responsible only for calculating the rates figures, and percentages shown on various forms that come to her for calculating work from other No 1 departments. In no event should the No 1 Calculator be made responsible for anything except the actual necessary calculations.

In brief, other departments served by the Calculator are responsible for indicating on the various working papers sent to the Calculator the proper premium formulae or other computations to be performed. The No 1 Calculator then is responsible for the accurate calculation. The Calculator is not held accountable if the computations indicated by some other department are incorrect. Of course, the No 1 Calculators should not perform calculations indicated which they know are improper, but should return such items to the department from which they were received.

On contacts with the Und Dept., any questions are taken up with the individual involved. The No 1 Und Manager is the final authority on interpretation of Manual rules and their application.

The Calculator may be called upon by other departments to figure miscellaneous items in addition to those covered in this manual. Specific instructions should be given in each instance so that the Calculator clearly understands how she is to handle these miscellaneous items.

##### C IMPORTANCE OF ACCURATE CALCULATING

If no other department in the No 1 Office is the need of accuracy any more important than in the No 1 Calculating Dept. Generally speaking, one of the major duties of the No 1 Calculator is the calculating of the dollars and cents involved in the various transactions between the Company and our policyholders. That is, practically all premiums, return premiums, corrections, dividends, etc., are calculated. Any errors in these figures are likely to result in financial loss to the Company or to the policyholder. Also, an error in the No 1 Calculating Dept. resulting in a premium over charge or under charge on a policy might entitle the policyholder and cause us to lose his goodwill.

##### D ORGANIZATION OF CALCULATING DEPT.

The No 1 Calculating Supervisor is in charge of the No 1 Calculating Dept. and does actual calculating work. The No 1 Calculating Supervisor is responsible for the allocation of duties, training and the coordination of all clerks in the department. The No 1 Calculating Supervisor reports to the No 1 Office Manager.

The number of persons comprising a No 1 Calculating Dept. varies depending upon the premium volume written by a No 1 Office and the amount of calculating work necessary. When a No 1 Calculating Dept. has more than one girl, one is known as Calculating Supervisor, and the other is Calculator. The work is divided by type, rather than by territory, the Calculating Supervisor handles corrections, cancellations, payroll audits, etc., and the second Calculator handles new business and renewals.

##### E CANCELLATION MANUAL

Please refer to the Cancellation Manual for cancellation and reinstatement procedure instructions.

Fig. 43.—Sample Manual Page.<sup>4</sup>

*Exhibits.* Another important part of our manuals is the exhibit section. We show our people by actual example how we want forms completed or procedures carried out. Actual forms or facsimiles are used as exhibits. In many cases our exhibits are prepared by printing regular copies of a form on pages to fit the manual in which the form is described. When running off a form which is to be described in a manual, we have sufficient copies made on 8½ X 11 paper for use as exhibits.

<sup>4</sup> Ibid.

*Improper use of manuals.* Manuals are of little value if improperly used. We find it necessary to keep reminding our people that manuals, like budgets, are a means to an end, or a guide in the operation of our business. Occasionally we find people who prefer to take a procedure outlined in a manual and use it in spite of the results obtained rather than to exercise judgment in carrying out the work at hand. A destructive flood along the Mississippi might make it desirable to handle premium collections in that territory at variance with the usual practice described in a manual. We try to put the responsibility for decisions as near as possible to the point of action.

*Proper use of manuals.* We have found that, when properly used, recorded procedures help in solving problems in field offices, as well as in the Home Office. It is not necessary to correspond and discuss the same subjects year after year or as positions are filled with different people. Instructions based on previous decisions can be found in the manual.

**Use of illustrations in manuals.** The written word is not the sole means available for establishing standards of correct practice. Diagrams showing the interrelations of departments, forms, personnel, the flow of work, correct routings, and the like, such as are shown in Figure 44, are often used. Such diagrams are excellent media for explaining the relations of parts to the whole. They go far toward providing the perspective required for sound judgments,

MAN AND MACHINE CHART

and they are easily and quickly understood. In some companies large diagrams are made for posting on bulletin boards or other

<sup>5</sup> Illustration from Kelly, N. J., "Simplifying Work Methods," *The Office*, March, 1916, p. 43.

strategic places; other firms do the same and in addition furnish miniatures to all individuals, with their written instructions.

Modern office manuals also make use of all kinds of illustrations. Photographs, line drawings, cartoons, charts, graphs, pictographs, and tables all can be used to good advantage, and the wider the variety, the better. Such illustrations create interest and reduce the amount of text the employee must read.

**Content of a typical general information manual.** Since the primary purpose of such a manual is to give specific information regarding company policies, rules, and regulations, the detailed content of the manual of one concern naturally will be somewhat different from that issued by another organization. The purpose of the following paragraphs, therefore, is merely to indicate in outline form the kind of data usually included in a general office manual.

*Introduction.* A typical foreword is this:

This manual is issued to familiarize you with the rules and regulations of the company and to give you a clear insight into the policies of the company in all its relations with you.

Should there be anything in connection with your work or the company's policies that you do not clearly understand, do not hesitate to ask your department head; he will be very glad to see that you receive the desired information.

You are expected to read this manual carefully and to preserve it for reference when occasion demands.

*Employment.* The official responsible for hiring, transferring, dismissing; rules regarding resignations or notice; recommending friends for jobs.

*Attendance.* Daily hours; holidays; absence, with or without leave, how paid for or penalized; lateness and promptness, how penalized or rewarded; overtime rules; vacations.

*Promotion.* Methods of salary increases, advancement, transfers; prizes or other reward methods for stimulating suggestions.

*Correspondence.* Rules regarding the distribution and collection of mail.

*Factory.* Details regarding the product, its manufacture, selling points, method of shipment, and so on.

*Customers.* Rules regarding acknowledgment of orders, handling complaints, samples of form letters illustrating relations between house and customer.

*Business etiquette.* Rules and suggestions regarding deportment, dress, talking, receiving visitors, telephone calls, smoking, personal mail, debts, neatness about desk and person, what is confidential about jobs, gifts, and so on.

*Facilities and equipment.* Hours and rules regarding use of lunch

room, rest room, library, and lockers. First aid and safety equipment available. Location of various departments. Use of machines. How to requisition supplies.

*Education and welfare.* Whatever is available in the way of schools or courses on the premises or in the neighborhood that may interest the employee. Prize and bonus plans; profit-sharing or pension system, clubs, and so forth.

A mailing-department manual. The following abstract from the office manual of the Graton and Knight Manufacturing Company, dealing with the work of the mailing department, illustrates a departmental procedure manual.

*Mail room.* A delivery of the greater part of the incoming mail is made to the department heads at 8:00 A.M., the balance of the first morning mail being delivered at 8:30. Other deliveries are made at 1:30 P.M. and at 3:00 P.M.

Collections of outgoing mail are made as follows: 10:30 A.M.; 1:30 P.M.; 3:00 P.M.; 4:30 P.M. No collections will be made after 4:30 except by a special request to the mail room by the person who desires to get mail in after this time. The morning and noon collections are made to enable the mail to catch certain through trains to distant points. Any mail for which especially rapid delivery is desired should be in the mail baskets well before collection time.

Interdepartmental mail is collected hourly on the following schedule: A.M.—7:45, 8:45, 9:45, 10:45; P.M.—12:45, 1:45, 2:45, 3:45. All interdepartmental mail should be delivered within a half-hour after the time of collection. Employees are requested to use this mail service for communications whenever possible, in order to save time, and also to prevent confusion throughout the office, which is a necessary result of much personal running of errands.

Where quick delivery of some paper is necessary at times other than those of the regular mail collections, office boys are available upon request to the mail-room head. It is desired, however, that the use of the office boys be kept at a minimum, and that they be called upon only for errands of an emergency nature.

Owing to the fact that our receiving departments are instructed to open all incoming parcel-post and other packages for purposes of recording receipts, it is suggested that all personal mail, etc., should be directed to home address to avoid confusion and possible embarrassment.

A departmental manual. The following abstract from the office manual of one company illustrates a departmental procedure manual:

P-Per 4

3-15-47

## ACCIDENTS AND INJURIES TO EMPLOYEES

*Personnel Department Procedure*

The General Procedure, P-Per 3, for the handling of all cases of illness, accident and injury to employees explains the duties of supervisors and First-Aid Kit Custodians with respect to the treatment and reporting of all such cases.

The duties of the Office Service Manager are as follows:

1. Upon receiving a report of an accident or an injury, investigate the case to determine if the attention of a physician is required.
2. If such is the case, have the employee escorted to the doctor's office or, if inadvisable to move the employee, have the doctor visit the office. When the treatment is completed, provide for the necessary escort to the employee's home from the Doctor's office or from the Company offices.
3. If the employee has no preference for a particular physician, refer him to:

3.1 For eye injuries:

Dr. . . . .

Address

Tel. No.

(Phone for appointment before sending patient)

or

Dr. . . . .

Address

Tel. No.

3.2 For all other injuries:

Dr. . . . .

Address

Tel. No.

4. Immediately after the occurrence of an accident which requires the services of a physician, the Office Service Manager shall notify the Compensation Claim Department immediately of the incident, by mail if the injury was not serious, by telephone if the injury was serious.
5. Mr. . . . . will consult with the Office Service Manager and fill out "Employee's First Report of Injury" in duplicate: (Form C-411).
  - 5.1 The original goes to Mr. . . . . who will file all necessary reports.
  - 5.2 The duplicate should be filed in the employee's Personnel File.

In the absence of the Office Service Manager, his function in the above procedure will be performed by the Personnel Department.

A manual for stenographers and secretaries. The following excerpts from the *Stenographers' Guide* of The Fuller Brush Company are indicative of the type of instructions which will aid in the standardization of correspondence forms and practices.<sup>6</sup>

*Foreword.* Over a period of many years we have noted the perplexing questions which arise during the stenographer's day. We have tried to cover these points as far as possible. . . . Although the subject matter and the tone of the letter are the responsibility of the dictator, the general arrangement and appearance of the correspondence rests with the stenographer. Thus, it is only by the cooperation of every secretary, stenographer and typist that we may hope to maintain the standards set for Fuller Brush Company letters. . . . The Company will welcome suggestions for the improvement of the next revised edition.

*To the stenographer:* Your skill in stenography and typing is the key that opens the doors of business to you. Once you are employed, your advancement depends upon many things. . . . First, you must have, or acquire, a personality that inspires confidence. Cheerfulness, tact and the ability to work harmoniously with other people, play an important part in the development of personality. Remember that cooperation is a "must" in successful business relationships. . . . A secretary should be able to meet all classes of people courteously and graciously. Knowledge of correct English is essential. To be confident that you do not make grammatical errors or mispronounce words, will give you poise and assurance.

*The mechanics of letter writing.* First impressions count. The general appearance of a letter influence the mental attitude of the reader. Fuller correspondence should be distinctive in appearance but should have no oddities of arrangement, for attention is distracted by an unusual set-up. . . . Any letter which is poorly arranged or which has errors in spelling or composition, casts a direct reflection on The Fuller Brush Company. . . . Stenographers should take pride in producing perfect letters, and so do their part in creating a favorable impression for their firm.

*Inter-organization correspondence.* Letters to our District Supervisors, Branch Managers and Field Managers should be written on Inter-Organization letterheads. No envelopes are required for branch mail.

*Inclosing self-addressed stamped envelope.* When writing a letter requesting a favor, it is courteous to inclose a self-addressed stamped envelope for reply. Please do this without being specifically directed in each case.

*Carbon copies.* Stationery is inter-leaved with carbon and distributed in the General Service Department. A light-weight white paper is used for extra copies. . . . The file copy is always made on yellow paper. Whenever a yellow sheet appears, we know it belongs in the files.

*Rules for carbon copies.* When writing to employees of the Company,

---

<sup>6</sup> Paul, E. A., *Stenographers' Guide*, The Fuller Brush Company, 1941.

provide an extra copy for the person higher up; that is, where the letter is to:

1. A Field Manager, make a copy for his Branch Manager and District Supervisor.
2. A Branch Manager, make a copy for the District Supervisor.

The Branch Manager should have a copy of all mail going into his territory. For instance, in answering an inquiry from Portland, Maine, we should send a copy to the Branch Manager of our Portland office.

*Form of letter.* It is our custom to write all letters in block form, single space, with double spacing between paragraphs. The right and left margins should be of equal width and the right margin as nearly straight as possible. If a letter is short, it may be centered by leaving wider margins, but the length of the typewritten line should never be less than five inches. A very short line gives the page an unbalanced appearance. . . . If a letter is double-spaced, the paragraphs should be indented.

Among the other subjects discussed in the sixty-four page manual of this company are:

Illustrations of accepted letter forms.

A list of words frequently confused (e.g., accept, except; affect, effect; already, all ready; etc.).

A list of words which are separated when written (e.g., all right, any day, any time, etc.).

A list of accepted abbreviations.

Rules for word division at the end of a line.

Words frequently misspelled.

Words frequently mispronounced.

Rules of capitalization.

Proper uses of punctuation marks.

The use of figures.

Telegraph, Cable and Radio Services.

Duplicating processes and the preparation of stencils and masters.

Terms used in the Company's business.

The Company calendar.

Stenographic and typing standards.

Directory of Executives, Department Heads and Correspondents.

**Instructions for individual employees.** The value and use of a manual is not limited to its original purpose of helping to establish correct practice. The analysis it makes of a job, and the detailed written description that it provides, enables the employment department to tell applicants exactly what they will be required to do. At the same time, manuals serve as a basis for specifying the personal and physical qualifications required to fill

a position successfully. Here is a characteristic page of instructions from the office manual of the Energy Control Company:<sup>7</sup>

*Procedure to be followed in checking an order—continued:* Invoice number to start at No. 1 and run consecutively. Cash received for such material would be placed in the Petty Cash Account of the Philadelphia Office and a record kept of such payments. Should a check be received for such materials the check would immediately be forwarded to New York for deposit. In placing this record in the Petty Cash Account, please be sure that the amount of cash received, the order number and invoice number, the customer's name, and the equipment are clearly noted on your petty cash record.

Upon notification of shipment by the factory of instruments, such as CO<sub>2</sub> Recorders, Flow Meters, or Combustion Control equipment, a service request form should immediately be made out which is to be turned over to the Service Department for a preliminary visit to the customer's plant to give whatever assistance possible in laying out the installation of the equipment. A report on such a visit should be made by the Service Department and this information should be placed in the permanent data file. If the Service Engineer wishes to follow-up his first visit with a second at a later date, he should notify the clerk in the office so that the report may be placed in the follow-up file to be referred back to him on the date specified.

*Filing system.* In the general office will be kept all correspondence of the current year and for one year previous. Correspondence, orders shipped, quotations, etc., prior to that period, will be kept in the file cases in the stock room for reference as required.

All correspondence will be filed alphabetically according to the subject of the correspondence (this to be the name of the particular job under discussion) except as noted in the following tabulation:

The division of files will be as follows:

1. General files.

The general files will be for all correspondence, quotations, specifications, and blue prints for every job. A folder will be made for each piece of correspondence under the name of the job and all correspondence for this particular job will be filed in its respective folder according to date, the current correspondence always placed on the top. The general files will be alphabetical regardless of territory, the name and address of the plant being typewritten on the label on the folder. As a rule all correspondence pertaining to one particular job may be filed in one folder. However, there are occasions such as might develop on large jobs where combustion control and complete layouts are being supplied, where the volume of correspondence is too large; in order to facilitate the handling of such jobs and the attaining of information quickly, these jobs will have the following divisions.

<sup>7</sup> "Planning and Preparing Office Manuals," *Dartnell Report No. 528*, Dartnell Corp., Chicago, 1945, p. 31.

An accounting department manual. Manuals are widely used by accounting departments, particularly by large organizations with many branch offices. The following extracts from the General Plant Accounting Instructions of Swift & Company in connection with the Federal Social Security Act are an excellent illustration of the practical utility of such manuals.<sup>s</sup>

Departments concerned:	P. A. Instr. #24
Manager	Bookkeeping
Auditor	Employment
Superintendent	Timekeeping
Departmental	Soc. Sec. Committee

### SOCIAL SECURITY TAXES

*General administration.* Accounting instructions pertaining to the Social Security laws are issued by the Plant Auditing Dept. Procedure in connection with employes' benefits is covered by the Social Security Benefit Manual. Questions regarding payment of taxes, contacts with governmental boards or their representatives, or interpretations of the law shall be addressed to the Social Security Division, Chicago.

*Registration of employer.* All employers were required to register each of their places of business on Form SS-4 during November, 1936. Each corporation is considered a separate employer. The Federal government has assigned one registration number to each corporation. Swift & Company (Illinois) corporation registration number is 36-1848190.

*Registration of employes.* Form SS-5 shall be used for registration of all employes. The Social Security Board will supply a numbered social security account card to each employe. Please impress upon employes the necessity of preserving these cards permanently.

### PAY ROLLS AND OTHER RECORDS

- a. Pay rolls and employes' records shall be retained in accordance with P. A. Instru. #170, Preservation of Records.
- b. Employes shall be grouped on pay roll in accordance with the state to which pay roll taxes are payable.
- c. The Bureau of Internal Revenue will compare the pay roll figures reported in the Federal unemployment insurance tax return with the pay roll reported in the income tax return; the two figures must agree, after making allowance for the following:
  - (1) Salaries or wages paid for services outside the United States.
  - (2) Labor charged to construction jobs—not included as labor, on income tax return.

*Accounts to be carried.* To record taxes accrued and charged to opera-

---

<sup>s</sup> Adapted from *Report on Controllers Manuals of Instructions*, Controllers Institute of America, New York, 1941.

tions and taxes collected from employes, the following accounts shall be carried:

Account	Ledger Section	
Federal Unemployment Insurance Tax Accrual	23	On trial balance: Separately. On balance sheet: Combined in item of Social Security Tax Accrual
State Unemployment Tax Insurance Accruals		
Federal Pension Tax Accrual		
Federal Unemployment Insurance Tax Expense	Memo Expense	On income statement, C-932: Separately.
State Unemployment Insurance Tax Expense		On departmental: Include in Social Service & Casualty.
Federal Pension Tax Expense		
Employees' State Unemployment Insurance Contributions	22	On trial balance: Separately. On balance sheet: Combined with Sundry Creditors.
Employees' Federal Pension Contributions		

*Transferring Federal and State tax accruals and contributions.* After the close of each calendar quarter, accrual and contribution accounts shall be treated as follows:

- a. Swift & Company (Illinois) units shall credit the balances of their Federal and State Unemployment Insurance and Federal Pension Accrual and Contribution Accounts to Chicago through Account Current, in the month following close of quarter, after making sure that accrual and contribution accounts reflect correct tax liability. When transfer is made, the two unemployment insurance tax accruals shall be combined into one figure and so listed on Form C-2699. The credit to Chicago Account Current shall be in one total for all accrual and contribution accounts combined.
- b. Home offices of subsidiary corporations shall carry Federal and State Unemployment Insurance and Federal Pension Accrual and Contribution accounts on their own books.

*Social Security Tax Report, Form C-2699.* All Federal and State Social Security tax returns are based upon pay roll reports on Form C-2699. This form is self-explanatory and will be made up as per instructions printed thereon or furnished by the Social Security Division. It shall be mailed to the home office of the corporation monthly or quarterly, as directed by the Social Security Division, Chicago, so as to reach the home office by the 15th of the month following close of taxable period.

#### FEDERAL AND STATE FORMS

- a. Each quarter, complete Federal Form SS-1b for all employees in triplicate, including temporary employees and those who have left

the service. Attach the original and duplicate to Form C-2699 and mail under private cover in accordance with instructions from Social Security Division. Retain triplicate in local file. (Chicago carries a stock of Form SS-1b under form numbers P. O. 1108 for Swift & Company (Illinois) and P. O. 1137 for subsidiaries.)

- b. State information returns are required quarterly by most states, such reports being similar to those of the Federal government. Procedures for filing state reports vary with the states. Forms required by home offices shall be attached to quarterly C-2699. State forms should be obtained locally by each unit. For further details see instructions from Social Security Division.

# 17

## *The Preparation and Use of Forms*

The importance attached to the preparation of forms has been admirably stated as follows: "That engineer is considered the best designer who develops a machine that produces the best results when used. Should not the designer of forms in an office be judged the same way, that is, by the results obtained when the forms are in use?"

Unfortunately there is a tendency, when a change of system is contemplated, to say, "We can draw up some forms that will take care of this." Forms play too important a part in clerical work for their preparation to be dismissed so quickly. When one considers that the largest part of clerical work consists of entering information on forms and transferring information from one form to another, it is apparent that the preparation, control, and use of forms are indeed important matters.

Advantages of giving proper attention to forms. Form preparation and control merit the careful consideration and attention of the office manager for two primary reasons: (1) It has been definitely shown in innumerable cases that money can be saved and wastes reduced when careful attention is given to the work of preparing and using forms. (2) Where such attention is given to forms and their use in business operations, greater standardization and efficiency are secured.

In the matter of money savings, reductions of 20 per cent or more, merely in the cost of the forms themselves, are by no means uncommon. Printing costs alone, including composition, press work, and paper stock, quickly mount up if the preparation of forms is not given careful consideration. An insurance company, for example, reports that a study of the costs of printing forms revealed one instance in which the printer was using a very expensive stock for a temporary form that was used once and then thrown away. Upon investigation it was found that a stock costing only one-third

as much would suffice. A survey of the proper grades of paper to be used for all forms in the organization revealed that about 75 per cent of them could be printed on a good grade of sulphite bond. This careful selection of paper meant a saving of \$4,000 in one year on one class of work alone.

While the benefits derived from standardization of procedure and higher clerical production per employee cannot always be measured as readily as can money savings, they are nevertheless of real practical importance. The proper arrangement of the data to be entered on a form is an important and essential step toward more efficient clerical production. In a subsequent section of this chapter a number of additional specific illustrations are given of direct and indirect savings and benefits that have accrued to nationally known companies as the result of the attention that has been given to form preparation, design, and control.

Procedure for establishing form control. When an office manager realizes the extent of the waste resulting from poorly designed forms and the advantages to be gained through the adoption of certain standards, he will naturally wish to secure these advantages for his organization. Although in some cases this is done by a forms committee, it is preferable to assign the authority and responsibility for such a program to the person most interested in forms, presumably the office manager. The procedure of the forms control plan and the place of the office manager in that plan should be explained to the officers and operating department heads, so that they will be more inclined to give him the coöperation which is essential to the success of work of this kind.

The first step in making a study of forms is to bring together all the present forms. This simple step usually emphasizes the necessity for the work about to be undertaken; for in almost every organization of any size it brings to light scores of forms that are obviously superfluous or obsolete.

When the forms are gathered, care must be taken to include all the forms. Every printed (or otherwise processed) piece of paper should be included. Letterheads, envelopes, memoranda, and accounting-department forms should not be overlooked. The stock room must not be overlooked. Nearly always a number of forms will be found that are not in active use but still clutter up the shelves. They survive because there is no official executioner. At the best they merely accumulate dirt and take up valuable space. Because they may inadvertently get into circulation, they should

be destroyed, and official notice should be given of their demise. After all forms have been secured they should be listed and analyzed. Figure 45 illustrates a convenient method of summarizing the important points regarding each form.

performance of clerical work easier than it would be if a blank sheet of paper were used. Consequently, the kind of information to be entered on the form, how it shall appear on the form, and other similar matters must receive first consideration.

Size of Form (in Inches)	Cuts Without Waste from Standard Sheet Measuring	Number Obtained from Single Standard-Size Sheet	Number of Single Forms Obtained from One Ream (500 Sheets) of Paper
2 $\frac{3}{4}$ × 4 $\frac{1}{4}$	17 × 22	32	16M
2 $\frac{3}{4}$ × 8 $\frac{1}{2}$	17 × 22	16	8M
3 $\frac{1}{2}$ × 4 $\frac{1}{4}$	17 × 28	32	16M
3 $\frac{1}{2}$ × 8 $\frac{1}{2}$	17 × 28	16	8M
3 $\frac{1}{2}$ × 17	17 × 28	8	4M
4 $\frac{1}{4}$ × 5 $\frac{1}{2}$	17 × 22	16	8M
4 $\frac{1}{4}$ × 7	17 × 28	16	8M
4 $\frac{1}{4}$ × 11	17 × 22	8	4M
4 $\frac{1}{4}$ × 14	17 × 28	8	4M
4 $\frac{1}{4}$ × 28	17 × 28	4	2M
5 $\frac{1}{2}$ × 8 $\frac{1}{2}$	17 × 22	8	4M
5 $\frac{1}{2}$ × 17	17 × 22	4	2M
7 × 8 $\frac{1}{2}$	17 × 28	8	4M
7 × 17	17 × 28	4	2M
8 $\frac{1}{2}$ × 11	17 × 22	4	
8 $\frac{1}{2}$ × 14	17 × 28	4	1M
8 $\frac{1}{2}$ × 22	17 × 22	2	1M
8 $\frac{1}{2}$ × 28	17 × 28	2	
11 × 17	17 × 22	2	1M 2M
14 × 17	17 × 28	2	2M 1M

Bond and ledger papers are usually promptly obtainable in 17 × 22, 17 × 28, 19 × 24, 22 × 34, 28 × 34, 24 × 38.

Use. The use to be made of the form includes a consideration of such things as how the information to be entered on the form will be received by the person preparing the form; whether the form is to be filled in in pencil, in ink, or on a machine; how long the form is to be kept; the relation of the form in question to other forms.

Standard form sizes. The form sizes listed below meet practically any need. Each can be cut, without waste, from standard sizes used by all printers.

Weight and color. The weight and color of paper to be used for forms involves four main factors:

1. Longevity. The length of time which the paper must resist deterioration.

2. Treatment. The amount and severity of handling, folding, or exposure to which the paper will be subjected.

3. Impress. The hand or mechanical method of applying the written matter, illustrations, decorations or rulings, and so forth.

4. Appearance. The character, or sense appeal, in the paper itself.

In general, it is advisable to standardize all forms on as small a variety of grades, weights, and colors of paper as is practical.

-As inexpensive a grade of paper as will give satisfactory service should be used. Because of possible confusion, and because of the expense, it is well to avoid elaborate color schemes. It is recommended that, if there are more than three copies of a form, they be distinguished by number rather than by color.

Lines printed or ruled. It is usually cheaper to print lines than to rule them, especially in large quantities, since the forms must be run through the press to print the type and the lines can be printed at the same time. If lines are ruled, the forms must be run through the ruling machines in one or more directions and in one or more colors after the type is printed. Practically all the effects gained by lines ruled in colors can be secured by the use of heavier or lighter printed lines, or by double lines. A further disadvantage of ruled forms is that corrections cannot be made easily after the form has been set up. Printers often refuse to show proof of forms containing horizontal and vertical rules, as correction of such forms might necessitate resetting the ruling pens throughout the entire form.

back should be "tumbled"; that is, the back should be printed so that when the bottom is turned up, the back of the card will be right side up.

6 PT. 521	NO. 1	GOTHIC TYPE FOR FORMS

<b>12 PT. 545</b>	<b>No. 8</b>	<b>GOTHIC TYPE FOR FORMS</b>

Fig. 46.—Sizes of Gothic Type.

Punched, scored, or perforated. The printer should be instructed as to the size of holes and distances from centers.

Quantity wanted. When a form is printed for the first time, or when an important change is made in an old form, it is not desirable to print more than a relatively small supply, so that, if the need for changes becomes apparent later, it will not be necessary to wait very long for these changes to be made. When the form has proved itself satisfactory, it is desirable to order a larger quantity—enough for six or eight months, but not more. Savings made through printing large quantities are often nullified by having to destroy out-of-date forms.

Principles of good form design. The following suggestions will be found helpful as a guide in designing forms.<sup>2</sup> Arrangement, more than any other single factor, will determine the success or failure of a form.

#### SUGGESTED STANDARDS RELATING TO FORMS

##### 1. As to Identification of Form:

- (a) Choose shortest possible form name that is indicative of the purpose of the form; at the same time, avoid ambiguity.
- (b) Place form name in a conspicuous spot on the form, usually in upper left in order to reserve upper right space for filing reference data.
- (c) Make certain that form name indicates its purpose.
- (d) Give each form a form number; since number usually becomes the frame of reference, place it in a conspicuous spot, preferably right above the form name and print the number in large characters.
- (e) Place date of latest revision on each form, preferably in abbreviated form (3/2/47) and in lower left corner.

<sup>2</sup> Peak, G. W., "Standards for Business Forms," *Office Management and Equipment*, March, 1946, p. 33.

- (f) Indicate quantity of form blanks reproduced by appropriate symbol or code in lower left corner.
  - (g) Number pages of form having more than one page, and place page number in upper right corner; indicate on each page the total number of pages (thus: 1 of 4).
  - (h) Provide for execution signature or signatures in lower right corner of last page of form unless there are compelling reasons to the contrary.
2. As to Filing Reference Data on Form:
- (a) Provide spaces for entry of all filing reference data in upper right corner.
  - (b) Provide space for entry of date on each form.
  - (c) Place date space, where possible, in upper right in close proximity to filing reference data.
3. As to Arrangement within Body of Form:
- (a) If form is to be used to take information from or pass information to another form, provide for same sequence of items.
  - (b) If the form is to be used to take information from two or more other forms, provide sequence of items to allow all information to be posted from first form, then from second form, and so on.
  - (c) Use box style wherever possible to conserve space and improve legibility.
  - (d) Provide a reference number or letter for each space to be filled in, and where columns are used, for each column, and where appropriate, for each line of the columnar space.
  - (e) Provide for checking lines or boxes where writing can be saved.
  - (f) Place boxes for checking optional items in front of the respective items to which they apply.
  - (g) Align spaces for tabular material on right hand side, thus:

Not this:	But this:	Or this:
Age . . . . .	Age . . . . .	Age . . . . .
Height . . . . .	Height . . . . .	Height . . . . .
Sex . . . . .	Sex . . . . .	Sex . . . . .
Weight . . . . .	Weight . . . . .	Weight . . . . .

- (h) Where possible, allow exact spacing required for information to be entered on form to prevent use of unnecessary words in filling in the form.
- (i) If form is to be sent from one person to another, provide proper spaces for "to" and "from."
- (j) Avoid unnecessary horizontal ruling on forms.
- (k) For forms to be filled in by typewriter, provide horizontal spaces in tenths or twelfths of inches and vertical spaces in sixths of inches; for forms to be filled in by hand, provide larger spaces; for forms to be filled in by special office equipment, provide spaces required by such equipment.
- (l) Arrange forms that are to be filled in by typewriter so as to allow maximum efficiency in the use of tabular stops and vertical ratchet movements.

- (m) Provide for cross-totals to check accuracy of computations where data consists of numbers to be entered in columnar or tabular fashion.
- (n) Provide for use of window envelopes, where possible, if form is to be mailed.
- (o) Use space "layout" sheets in designing forms to save time and effort.
- (p) Consult actual users of form for suggested improvements, additional requirements, and possible elimination before "freezing" the design.

4. As to Instructions for Use of Form:

- (a) If form is used by a large number of persons and infrequently by some of them, or is used to convey instructions to outsiders, print instructions on form (use front of form where space is available; otherwise use back of form).
- (b) If form is used frequently by the same persons, especially where all space is needed for entries on form, print instructions separately, preferably as a part of the procedure manual or the form manual.
- (c) Print long instructions in columns instead of clear across the page.

5. As to Form Dimensions, Borders, Edges, Bindings, and Backs:

- (a) Limit dimensions to sizes that will fit the usual office machines and filing equipment, preferably to  $8\frac{1}{2} \times 11$  inches or multiples thereof.
- (b) Provide for dimensions that can be folded conveniently for envelopes, if form is to be mailed or transmitted over considerable distances.
- (c) Use form border, since, contrary to what it would seem, this usually gives more horizontal space, the typist using all the space inside the border line and not allowing extra, unneeded margin.
- (d) Wherever possible except for the smaller sizes, arrange forms so that the shortest side feeds into the typewriter.
- (e) Use continuous-feed forms where practicable to save typewriter insertions.
- (f) Avoid small forms having perforations on one or more edges where this increases difficulty in filing.
- (g) Leave appropriate margins to allow for the holding of the form by the reproducing equipment.
- (h) Where form is to be bound, leave appropriate margin at left side, top or bottom.
- (i) Leave  $\frac{1}{3}$  inch margin or more at bottom of form to prevent slipping in typewriter.
- (j) Provide for binding of blank forms in convenient size book where they must be carried around and filled in away from an office.
- (k) Use pre-inserted, one-time carbon forms where labor is important part of operation in filling in large numbers of forms.
- (l) Utilize back of form instead of second sheet if legibility can be retained or if checking from one sheet to the other is not involved.
- (m) Print head to head where back of form is utilized and form is to

mean Form 17 used by the sales department. The roman numeral M prefaced by the number of thousand forms printed usually is used to indicate the quantity printed. The month of the year expressed in number form should also be indicated. If these symbols are used, the number S21-9M-3-47 would mean that the particular form was a sales department record, No. 21, that 9000 had been printed, and that they had been printed in March, 1947.

**Private printing plants versus purchased printing.** In a small organization the question as to whether the company should print its own forms or have them done by an outside printer seldom arises, since it is obvious that the former method would be impractical from the expense standpoint alone. Many such concerns, however, as well as larger organizations, are making increasing use of reproduction methods other than printing, such as the stencil, offset, multigraph, and spirit duplicator processes. In a number of cases the results secured are equally satisfactory from the point of view of practical utility, while the cost is substantially lower.

In the case of large companies, it may seem that the establishment of a company printing plant would be advantageous, from the standpoint of both cost and service. While there is little doubt that, because of direct company control, better service can be obtained in such cases, the amount of money actually saved is often not so much as one might expect. Direct salaries for the printing-department employees mount to unexpected figures, and the investment in printing-plant equipment, as well as the cost of maintenance and repairs, is relatively high. Unless the company is very large, a considerable amount of time when the equipment is idle must be charged against the job turned out by the company-owned printing plant. Few firms have enough work to keep the presses running continually. Moreover, it is difficult to secure and hold experienced workers in the small shop where the volume of work varies considerably. Furthermore, a company printing shop managed by someone who is not an expert printer is at a great disadvantage when the quality and cost of its work are compared with that done by an outsider who has been in the business for many years.

For these and other reasons, a number of firms who formerly operated printing plants have discontinued them, retaining only a duplicating department, which is maintained for convenience and for the savings to be achieved in connection with short runs. The Metropolitan Life Insurance Company and The New York

Trust Company have done this, the Metropolitan change being of interest because of the size of the plant, which at one time employed 500 people. Other firms, such as the Shell Oil Company and Servel, Inc., produce most, if not all, of their office printing requirements in their own print shops.

#### FORMS CONTROL PROGRAM OF THE STANDARD OIL CO. OF N. J.<sup>3</sup>

During the several years since the forms control and standardization program of the Standard Oil Co. of New Jersey was instituted at the company's Baton Rouge Refinery, it has resulted in many changes being made in forms used at the Refinery—changes which have saved both time and money for all concerned by speeding up their paper work and making it easier of accomplishment.

Fundamentally, this program is designed to effect all possible economies in connection with printing by (1) continually and substantially reducing the number of plant and office forms used throughout the company, and (2) standardizing and simplifying the size and design of all forms remaining in use.

Forms writing is a factor of major importance in a plant such as the Baton Rouge Refinery, with its varied and complex operations. It is not hard to understand, then, why a program geared to achieve the maximum efficiency in paper work, and at the same time manage to reduce printing costs, should be very desirable.

The unprecedented demand for the myriad forms required to run a vitally essential plant has taxed the ingenuity of the Printing Standards Division, but it has been able to "meet the boat" and, at the same time, has been able to heed the admonition "to continually and substantially reduce the number of forms."

When the standardization program was instituted there were in existence 2,250 forms. During the slightly more than four-year period from October 15th, 1940, to December 31st, 1944, 712 forms were added (principally because of war requirements), while 1,070 forms were eliminated through standardization. And this was accomplished while the local plant was expanding by leaps and bounds, increasing not only to twice its former size, but also multiplying its activities many fold. The advent of Government-operated plants, new operations and products, governmental restrictions and requirements, and the other activities of a plant exerting every effort towards the winning of the war, created a demand for a variety of forms far surpassing anything experienced before.

207 forms required reprinting or overprinting when the merger was accomplished. If this merger had taken place in 1940, it would have been a far different story. Virtually all of the 2,250 forms then in use would have required revision, which would have been a tremendous undertaking.

The forms control and standardization program for the Louisiana division is under the general management supervision of F. P. Hagaman, division comptroller, who coordinates local activities with those of other participating subsidiaries of the Standard Oil Co. (New Jersey). This coordination of efforts is effected through the technical and advisory supervision of the Printing Standards Division at 30 Rockefeller Plaza in New York.

The operation of the Printing Standards Division in Baton Rouge is composed of the Division Head, assisted by a trained staff consisting of a senior forms designer, a junior forms designer, and a forms data clerk and Varitypist.

What makes the Printing Standards Division click? Correct forms control and standardization is really a problem of two parts: physical standardization and functional standardization. Physical standardization is important, but it is obvious and comparatively easy, while functional standardization is not so easy, nor is it so obvious. But it is of much greater importance.

Intelligent physical standardization results in savings of paper, ink, composition and printing costs by achieving the maximum efficiency in the use of the company's printing plant at Baltimore. This is accomplished by the wise application of physical designing methods, combined with controlled requisitioning procedures. Although sizable savings are effected through physical standardization, the economies accomplished through scientific functional forms standardization are of greater magnitude.

What, then, is meant by functional standardization? It is an important distinction. The objective is to employ a designing technique which will give a form its greatest usefulness to all concerned; not just typographic beauty or conformity with standard sizes.

It is well to remember in this connection that a form which may cost from one to five cents to print, usually creates a "processing" or clerical expense of 15 cents to one dollar. When this fact is considered, it emphasizes the great desirability of designing forms in such a manner as to endow them with as much utility and efficiency as is possible, so that they can be speedily completed, intelligently interpreted, and easily filed.

*Basic functions of forms.* Analyzing the function of the form, therefore, is the first step in its proper design. Experience has disclosed that there are 18 basic functions being performed by forms used at Baton Rouge Refinery. Whenever one of them is used, it is expected to accomplish one of the following aims:

1. Adjust.
2. Apply.

3. Assign or specify.
4. Authorize.
5. Bill or claim.
6. Classify or rate.
7. Contract.
8. Direct or instruct.
9. Follow-up.
10. Identify.
11. Order or procure.
12. Receive or receipt.
13. Record or tabulate.
14. Report or notify.
15. Requisition or request.
16. Route or transmit.
17. Schedule.
18. Ship.

Which of the foregoing loads is the proposed form expected to carry? This is the first thing to be determined. By going to a cross-indexed file of forms it is possible either to suggest an existing form, or else to revise a somewhat similar existing form to serve the needs of the old and proposed forms. If it is ascertained that neither of these alternatives is feasible nor acceptable, a new form is inaugurated.

*Evolution of a standard form.* Figures 47 and 48 are two illustrations which permit graphic comparison of the evolution of a form from a non-standard to a standardized type. This particular form has been picked for illustration because it combines standards of designs from

#### NON-STANDARD

This form required three printing operations, two pen-ruling and one letterpress. Its original size of 11" x 5-5/8" could not be cut economically from standard stock sizes.

Because it was necessary to make repeated use of the carriage release, the space bar and the back spacer, it required 200 typewriter strokes to enter the data on this form. Lost time and clerical inefficiency resulted because of uneven alignment of printed data.

Fig. 47.—Form Before Standardization.

both physical and functional factors. It would have been possible to save several hundred dollars by merely applying physical standardization techniques to this form; but when it was discovered that it was being processed by several typists who worked full time on this one job, the advantages of both functional and physical standardization were pointed out to the supervisor.

Notice the arrangement of the printed data and rules on the "non-standard" form. When this form was conceived, the requirements of other personnel were overlooked. The typist, for example, was not able to use her machine efficiently on this form. The uneven alignment of vertical rules and printed data caused 15 starting positions for typed matter. The use of tabular keys was practically eliminated, thus necessitating the repeated use of carriage release, space bar, and back spacer to position her machine. Improper designing created a processing expense on this form which was greatly in excess of what it should have been.

### STANDARDIZED

This form was produced according to physical and functional standards. It required only one offset printing operation. Its actual size is 8-3/8" x 10-7/8".

Instead of using the carriage release, space bar and back-spacer to position the carriage for entering data, the typist now uses the TABULAR KEY. The same data was typed with 375 strokes instead of 600. Vertical alignment of printed captions made this possible.

Fig. 48.—Form After Standardization.

has a triple responsibility: (1) to provide an efficient tool for the originator of the form; (2) to protect the interest of the receiver of the form; and (3) to be mindful of printing limitations, as well as to consider the possibilities offered by modern printing. With the assistance and co-operation of the originator, receiver, and printer of the form, the forms analyst is in the best position to increase efficiency in paper work and at the same time decrease printing expenses.

Printed forms are vital tools in the conduct of a plant such as the Baton Rouge Refinery. They are used almost everywhere and by a majority of employees. Since it is of major importance that the best tools be obtainable for every job, and that they be made available at the proper time, the Printing Standards Division is cooperating to that end by keeping alert to all the possibilities offered by the new forms designing developments which have received such a tremendous impetus in recent years.

**Western Electric's form standards.** In a previous discussion of standardization of equipment, reference was made to the Western Electric Company program. This program pays particular attention to form design and standardization:<sup>4</sup>

Office forms, both those of a general nature (applicable to two or more departments) and those of a departmental nature (used in or useful to only one department) are considered of sufficient importance to warrant special attention independent of other items of office supplies.

A supervisor of form standards is responsible to the committee for setting up general standardization, and for design, suitable specifications and sample files, and necessary information relative to general forms. He also studies departmental forms, primarily to determine whether their design and physical specifications are in accordance with the standards established by the committee and published in a form-design manual. As a by-product of such a study he calls attention to the possibility of simplification and improved utility and suggests combinations or elimination of forms for such action as is considered desirable or appropriate by the individual department affected. He also recommends general forms to replace individual departmental forms which have a common use or similar characteristics.

**How Servel controls its forms.** The plan of inventory control of record forms in use at Servel, Inc., is interesting because of its attention to all the details necessary to an accurate and economical forms control plan.<sup>5</sup>
